# **RADIO TEST REPORT**

Report No: STS2205214H01

Issued for

BTECH (BaoFeng Tech)

702 N Industrial Ave Arlington South Dakota United States 57212

Product Name:	GMRS mobile radio
Brand Name:	BTECH
Model Name:	GMRS-50V2
Series Model:	N/A
FCC ID:	2AGND50V2G
Test Standard:	FCC 47CFR §2.1091

Any reproduction of this document must be done in full. No single part of this document may be reproduced without permission from STS, all test data presented in this report is only applicable to presented test sample.

Report No.: STS2205214H01

## **Test Report Certification**

Applicant's Name: BTECH (BaoFeng Tech)
Address 702 N Industrial Ave Arlington South Dakota United States 57212
Manufacturer's Name: BTECH (BaoFeng Tech)
Address : 702 N Industrial Ave Arlington South Dakota United States 57212
Product Description
Product Name : GMRS mobile radio
Brand Name : BTECH
Model Name
Series Model: N/A
Standards FCC 47CFR §2.1091 447498 D04 Interim General RF Exposure Guidance v01
This report shall not be reproduced except in full, without the written approval of STS, this document only be altered or revised by STS, personal only, and shall be noted in the revision of the document.
Date of Test
Date of receipt of test item 31 May 2022
Date (s) of performance of tests 31 May 2022 ~ 21 Oct. 2022
Date of Issue: 21 Oct. 2022
Test Result

Report No.: STS2205214H01

## 1. GENERAL INFORMATION

## 1.1 GENERAL DESCRIPTION OF THE EUT

Product Name	GMRS mobile radio				
Brand Name	BTECH				
Model Name	GMRS-50V2				
Series Model	N/A	N/A			
Model Difference	N/A	N/A			
Product Description	The EUT is GMRS Operation Frequency: Modulation Type: Antenna gain:	Mobile radio 462MHz-467MHz GMRS(F3E) 0dBi			
Rating	Input: DC 13.8V				
Hardware Version	V1.5				
Software Version	VW2205				

## **1.2 TEST FACTORY**

SHENZHEN STS TEST SERVICES CO., LTD Add. : A 1/F, Building B, Zhuoke Science Park, No.190 Chongqing Road, HepingShequ, Fuyong Sub-District, Bao'an District, Shenzhen, Guang Dong, China

FCC test Firm Registration Number: 625569

IC test Firm Registration Number: 12108A

A2LA Certificate No.: 4338.01

## 2. FCC 47CFR §2.1091 REQUIREMENT

#### 2.1 TEST STANDARDS

Follow the maximum permissible exposure (MPE) limits specified in 447498 D04 Interim General Radio Frequency Exposure Guidelines v01. The gain of the antenna used in the product was extracted from the supplied antenna data sheet and the maximum total power input to the antenna was also measured. Calculate the distance from the product to the MPE limit by the formula.

#### 2.2 LIMIT FOR EXEMPTIONS

For single RF sources (i.e., any single fixed RF source, mobile device, or portable device, as defined in paragraph (b)(2) of this section): A single RF source is exempt if:

(A) The available maximum time-averaged power is no more than 1 mW, regardless of separation distance. This exemption may not be used in conjunction with other exemption criteria other than those in paragraph (b)(3)(ii)(A) of Part 1.1307. Medical implant devices may only use this exemption and that in paragraph (b)(3)(ii)(A);

(B) Or the available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold Pth (mW) described in the following formula. This method shall only be used at separation distances (cm) from 0.5 centimeters to 40 centimeters and at frequencies from 0.3 GHz to 6 GHz (inclusive). Pth is given by:

$$P_{th} (mW) = \begin{cases} ERP_{20 \ cm} (d/20 \ cm)^x & d \le 20 \ cm \\ ERP_{20 \ cm} & 20 \ cm < d \le 40 \ cm \end{cases}$$

Where

$$x = -\log_{10}\left(\frac{60}{ERP_{20} cm\sqrt{f}}\right) \text{ and } f \text{ is in GHz};$$

and

$$ERP_{20\ cm}\ (\text{mW}) = \begin{cases} 2040f & 0.3\ \text{GHz} \le f < 1.5\ \text{GHz} \\ \\ 3060 & 1.5\ \text{GHz} \le f \le 6\ \text{GHz} \end{cases}$$

d = the separation distance (cm);

A 1/F, Building B, Zhuoke Science Park, No.190 Chongqing Road, HepingShequ, Fuyong Sub-District, Bao'an District, Shenzhen, Guang Dong, China Tel: +86-755 3686 6288 Fax:+86-755 3686 6277 Http://www.stsapp.com E-mail: sts@stsapp.com

(C) Or using below table and the minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. For the exemption in Table 1 to apply, R must be at least  $\lambda/2\pi$ , where  $\lambda$  is the free-space operating wavelength in meters. If the ERP of a single RF source is not easily obtained, then the available maximum time-averaged power may be used in lieu of ERP if the physical dimensions of the radiating structure(s) do not exceed the electrical length of  $\lambda/4$  or if the antenna gain is less than that of a half-wave dipole (1.64 linear value).

RF Source frequency (MHz)	Threshold ERP(watts)
0.3-1.34	1,920 R <sup>2</sup> .
1.34-30	3,450 R²/f².
30-300	3.83 R <sup>2</sup> .
300-1,500	0.0128 R <sup>2</sup> f.
1,500-100,000	19.2R <sup>2</sup> .

#### Page 8 of 10

For multiple RF sources: Multiple RF sources are exempt if:

(A) The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required). This exemption may not be used in conjunction with other exemption criteria other than those is paragraph (b)(3)(i)(A) of Part 1.1307. Medical implant devices may only use this exemption and that in paragraph (b)(3)(i)(A). (B) in the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

## Where:

a = number of fixed, mobile, or portable RF sources claiming exemption using paragraph (b)(3)(i)(B) of Part 1.1307 for Pth, including existing exempt transmitters and those being added. b = number of fixed, mobile, or portable RF sources claiming exemption using paragraph (b)(3)(i)(C) of Part 1.1307 for Threshold ERP, including existing exempt transmitters and those being added.

c = number of existing fixed, mobile, or portable RF sources with known evaluation for the specified minimum distance including existing evaluated transmitters.

Pi = the available maximum time-averaged power or the ERP, whichever is greater, for fixed, mobile, or portable RF source i at a distance between 0.5 cm and 40 cm (inclusive).

Pth, i = the exemption threshold power (Pth) according to paragraph (b)(3)(i)(B) of this section for fixed, mobile, or portable RF source i.

ERPj = the ERP of fixed, mobile, or portable RF source j.

ERPth, j = exemption threshold ERP for fixed, mobile, or portable RF source j, at a distance of at least  $\lambda/2\pi$  according to the applicable formula of paragraph (b)(3)(i)(C) of Part 1.1307.

Evaluatedk = the maximum reported SAR or MPE of fixed, mobile, or portable RF source k either in the device or at the transmitter site from an existing evaluation at the location of exposure.

Exposure Limitk = either the general population/uncontrolled maximum permissible exposure (MPE) or specific absorption rate (SAR) limit for each fixed, mobile, or portable RF source k, as applicable from § 1.1310.

Shenzhen STS Test Services Co., Ltd. 		Page 9 of 10	Report No.: STS2205214H01		
2.3 LIMIT FOR MAXI					
Frequency Range	Electric Field	Magnetic Field	Power Density		
(MHz)	Strength (V/m)	Strength (A/m)	(mW/cm²)		
Limits for Occupation	nal / controlled Expo	osures			
300 - 1500			F/300		
1500 – 100000			5.0		
Limits for General po	pulation / Uncontro	lled Exposure			
300 - 1500			F/1500		
1500 – 100000			1.0		
F= Frequency in MHz					
Friss Formula					
Friss Transmission Fo	ormula: Pd = (Pout *	G) / (4*pi*r²)			
Where					
Pd = power density in	mW/cm <sup>2</sup>				
Pout = output power t	o antenna in mW				
G = gain of antenna ir	n linear scale				
Pi = 3.1416					
R = Distance betweer	observation point a	and the center of radiator	in cm		
If we know the maximum gain of the antenna and the total output power to the antenna, through					

calculation, we will know MPE value at distance 20cm.

Page 10 of 10

Report No.: STS2205214H01

2.4 TEST RESULT

Fre.(MHz)	λ/2π (mm)	Minimum Distance (R) (mm)	Threshold ERP (W)	MAX ERP (dBm)	MAX ERP (W)	MAX Time-averaged Power (W)	Whether MPE is required
462.625	103.2107887	800	3.79	46.65	46.24	23.12	YES

#### MPE

Fre.(MHz)	MAX Time-averaged Power (W)	MAX Time-averaged Power (mW)	ANT Gain(gain of antenna in linear scale)	Power Density (S) (mW/cm <sup>2</sup> )	Limit Power Density (S) (mW/cm²)
462.625	23.12	23120	1	0.287	0.308

Note: 1. Duty cycle=50%, R=80cm

- 2. MAX Time-averaged Power =MAX ERP\*Duty cycle
- 3. From § 1.1307(b)(3)(i)(C), R must be at least  $\lambda/2\pi$ .
