

JianYan Testing Group Shenzhen Co., Ltd.

Report No: JYTSZB-R12-2101945

FCC REPORT

Applicant: Autel Robotics Co., Ltd.

Address of Applicant: 9th Floor, Bldg. B1, Zhiyuan, 1001 Xueyuan Rd., Xili, Nanshan,

Shenzhen 518055, China

Equipment Under Test (EUT)

Product Name: DragonFish Ground Control Station

Model No.: DFRC-2

Trade mark:

ROBOTICS

FCC ID: 2AGNTDFRC2TBA

Applicable standards: FCC CFR Title 47 Part 15 Subpart E Section 15.407

Date of sample receipt: 24 Sep., 2021

Date of Test: 24 Sep., to 20 Oct., 2021

Date of report issued: 20 Oct., 2021

Test Result: PASS*

* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Bruce Zhang Laboratory Manager

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the JYT product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

4 Test Summary

| Test Item | Section in CFR 47 | Test Data | Test Result |
|----------------------------------|---------------------------------|-----------------|-------------|
| Antenna requirement | 15.203 & 15.407 (a) | See Section 6.1 | Pass |
| AC Power Line Conducted Emission | 15.207 | See Section 6.2 | Pass |
| Conducted Output Power | (a) (3) | See Section 6.3 | Pass |
| 26dB Occupied Bandwidth | 15.407 (a) (12) | See Section 6.4 | Pass |
| 6dB Emission Bandwidth | 15.407(e) | See Section 6.4 | Pass |
| Power Spectral Density | (a) (3) | See Section 6.5 | Pass |
| Band Edge | 15.407(b) | See Section 6.6 | Pass |
| Spurious Emission | 15.407 (b) & 15.205 & 15.209 | See Section 6.7 | Pass |
| Frequency Stability | 15.407(g) | See Section 6.8 | Pass |

Remark:

Test Method:

ANSI C63.10-2013

KDB 789033 D02 General UNII Test Procedures New Rules v02r01

Telephone: +86 (0) 755 23118282 Fax: +86 (0) 755 23116366

^{1.} Pass: The EUT complies with the essential requirements in the standard.

The cable insertion loss used by "RF Output Power" and other conduction measurement items is 0.5dB (provided by the customer).

5 General Information

5.1 Client Information

5.2 General Description of E.U.T.

| Product Name: | DragonFish Ground Control Station | | | |
|------------------------|-------------------------------------------------------------------------------|--|--|--|
| Model No.: | DFRC-2 | | | |
| Operation Frequency: | 5729.68-5770.68 MHz | | | |
| Channel numbers: | 42 | | | |
| Channel separation: | 1 MHz | | | |
| Modulation technology: | GFSK | | | |
| Antenna Type: | External Antenna (ANT 5) | | | |
| Antenna gain: | Chip 4: | | | |
| | ANT 5: 3.2 dBi (declare by Applicant) | | | |
| Power supply: | Rechargeable Li-ion Battery DC11.4V-8.2Ah | | | |
| AC adapter: | Adapter 1: | | | |
| | Model: ADS-110DL-19-1 190090G | | | |
| | Input: AC100-240V, 50/60Hz, 1.5A | | | |
| | Output: DC 19.0V, 4.74A | | | |
| | Adapter 2: | | | |
| | Model: DF_CHARGER | | | |
| | Input: AC100-240V, 50/60Hz, 4.0A | | | |
| | Output: DC 26.4V, 7A | | | |
| Test Sample Condition: | The test samples were provided in good working order with no visible defects. | | | |

| Operation Frequency each of channel for 19 for 1.4MHz Bandwidth | | | | | | | | |
|-----------------------------------------------------------------------|------------|----|------------|----|------------|--|--|--|
| Channel Frequency Channel Frequency Channel Frequency | | | | | | | | |

Report No: JYTSZB-R12-2101945

5.3 Test environment and mode

| Operating Environment: | | | | | |
|------------------------|---------------------------------------------------------|--|--|--|--|
| Temperature: | 24.0 °C | | | | |
| Humidity: | 54 % RH | | | | |
| Atmospheric Pressure: | 1010 mbar | | | | |
| Test mode: | | | | | |
| Transmitting mode | Keep the EUT in continuous transmitting with modulation | | | | |

Radiated Emission: The sample was placed 0.8m (below 1GHz)/1.5m (above 1GHz) above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages. Duty cycle setting during the transmission is 100% with maximum power setting for all modulations.

5.4 Description of Support Units

| Manufacturer | Description | Model | Serial Number | FCC ID/DoC |
|------------------------|------------------------|-------|---------------|------------|
| The EUT has been teste | d as an independent un | it. | | |

5.5 Measurement Uncertainty

| Parameter | Expanded Uncertainty (Confidence of 95%) |
|------------------------------------------------------------|------------------------------------------|
| Conducted Emission (9kHz ~ 150KHz) for V-AMN | 3.11 dB |
| Conducted Emission (150kHz ~ 30MHz) for V-AMN | 2.62 dB |
| Conducted Emission (150kHz ~ 30MHz) for AAN | 3.54 dB |
| Radiated Emission (9kHz ~ 30MHz electric field) for 3m SAC | 3.13 dB |
| Radiated Emission (9kHz ~ 30MHz magnetic field) for 3m SAC | 3.13 dB |
| Radiated Emission (30MHz ~ 1GHz) for 3m SAC | 4.45 dB |
| Radiated Emission (1GHz ~ 18GHz) for 3m SAC | 5.34 dB |
| Radiated Emission (18GHz ~ 40GHz) for 3m SAC | 5.34 dB |

5.6 Additions to, deviations, or exclusions from the method

No

5.7 Related Submittal(s) / Grant (s)

This is an original grant, no related submittals and grants.

5.8 Laboratory Facility

The test facility is recognized, certified, or accredited by the following organizations:

• FCC - Designation No.: CN1211

JianYan Testing Group Shenzhen Co., Ltd. has been accredited as a testing laboratory by FCC(Federal Communications Commission). The test firm Registration No. is 727551.

• ISED - CAB identifier.: CN0021

The 3m Semi-anechoic chamber and 10m Semi-anechoic chamber of JianYan Testing Group Shenzhen Co., Ltd. has been Registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 10106A-1.

• A2LA - Registration No.: 4346.01

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 General requirements for the competence of testing and calibration laboratories. The test scope can be found as below link: https://portal.a2la.org/scopepdf/4346-01.pdf

5.9 Laboratory Location

JianYan Testing Group Shenzhen Co., Ltd.

Address: No.101, Building 8, Innovation Wisdom Port, No.155 Hongtian Road, Huangpu Community, Xingiao Street, Bao'an District, Shenzhen, Guangdong, People's Republic of China.

6 Test results and Measurement Data

6.1 Antenna requirement

Standard requirement: FCC Part15 E Section 15.203 /407(a)

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

Report No: JYTSZB-R12-2101945

This requirement does not apply to carrier current devices or to devices operated under the provisions of §15.211, § 15.213, § 15.217, § 15.219, or § 15.221. Further, this requirement does not apply to intentional radiators that must be professionally installed, such as perimeter protection systems and some field disturbance sensors, or to other intentional radiators which, in accordance with § 15.31(d), must be measured at the installation site. However, the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this part are not exceeded.

E.U.T Antenna:

The antenna cannot replace by end-user, the best case gain of the antenna is 3.2dBi

| | RMS | 1MHz | 3MHz | Average Value | | |
| Test Procedure: | Imit: E[dBμV/m] = EIRP[dBm] + 95.2=68.2 dBuV/m, for EIPR[dBm]=-27dBm. E[dBμV/m] = EIRP[dBm] + 95.2=105.2 dBuV/m, for EIPR[dBm]=10dBm. E[dBμV/m] = EIRP[dBm] + 95.2=110.8 dBuV/m, for EIPR[dBm]=15.6dBm. E[dBμV/m] = EIRP[dBm] + 95.2=122.2 dBuV/m, for EIPR[dBm]=27dBm. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable was turned from 0 degrees to 360 degrees to find the maximum reading. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be | | | | | |
| | tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet. | | | | | |

6.8 Frequency stability

| 0.0 Frequency stabi | | | | |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Test Requirement: | FCC Part15 E Section 15.407 (g) | | | |
| Limit: | Manufacturers of U-NII devices are responsible for ensuring frequency stability such that an emission is maintained within the band of operation under all conditions of normal operation as specified in the user's manual. | | | |
| Test setup: | Spectrum analyzer EUT Variable Power Supply Note: Measurement setup for testing on Antenna connector | | | |
| Test procedure: | The EUT is installed in an environment test chamber with external power source. Set the chamber to operate at 50 centigrade and external power source to output at nominal voltage of EUT. A sufficient stabilization period at each temperature is used prior to each frequency measurement. When temperature is stabled, measure the frequency stability. The test shall be performed under -30 to 50 centigrade and 85 to 115 percent of the nominal voltage. Change setting of chamber and external power source to complete all conditions. | | | |
| Test Instruments: | Refer to section 5.10 for details | | | |
| Test mode: | Refer to section 5.3 for details | | | |
| Test results: | PASS | | | |
