

RF Exposure Estimation

1. Introduction

Applicant:	HCS (Suzhou) Limited
Address:	19F-20F, Building B-3rd, No.209 Zhuyuan Road, New District, Suzhou, P.R.China
Product:	Remote Control
FCC ID:	2AGOFRC469A
Model No.:	RC4693701/01BR, RC469XXXX/XXR, RC469XXXX/XXBR ("X"=0-9,"B" means packed with battery)
Reference RF report #	709502283606-00A

2. RF Exposure Evaluation

Per the test report included herein, for 2402~2480MHz

According to ANSI C63.10-2013 (9.5 Equations to calculate EIRP),

Calculated Data:

According to C63.10 Annex G

$$EIRP = p_t \times g_t = (E \times d)^2 / 30, \text{ so } p_t = (E \times d)^2 / 30 \times g_t$$

where

p_t is the transmitter output power in watts

g_t is the numeric gain of the transmitting antenna (dimensionless)

E is the electric field strength in V/m

d is the measurement distance in meters (m)

transmitter output power for 2402~2480MHz Function

Field strength (E):	98.73 (dBuV/m) = 0.0864 (V/m)
Measurement distance (D):	3 (m)
Antenna Gain, typical (dBi):	-3.5
Numerical gain of the transmit antenna (g_t):	0.45
Transmitter output power (TP):	0.005013(W)
Transmitter output power (TP):	5.013(mW)

The worst-case test separation distance is 5mm.

The product belongs to standalone portable device base the FCC rule part 2.1091&2.1093. The

transmission frequencies of the device are between 100 MHz and 6 GHz. In KDB 447498 D01 v06:

4.3.1 Standalone SAR test exclusion considerations: The SAR Test Exclusion Threshold is calculated

from: [(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance,

mm)] $\cdot [\sqrt{f(\text{GHz})}] \leq 3.0$ for 1-g SAR

● $f(\text{GHz})$ is the RF channel transmit frequency in GHz

● Power and distance are rounded to the nearest mW and mm before calculation 17

● The result is rounded to one decimal place for comparison The Max Conducted Output Power and

SAR Test Exclusion Threshold (mW) are listed below:

$$[(\text{max. power of channel, including tune-up tolerance, mW})/(\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$$

TX Power + tune up tolerance = 5.013mW

Distance = 5 mm

f = 2.402 GHz

$$[5.013/5] * \text{SQRT}(2.402) = 1.554$$

$$1.554 \leq 3.0$$

Therefore, excluded from SAR testing.

According to SAR Exclusion Threshold in KDB 447498 (D01) General RF Exposure Guidance v06, the SAR report is not required.
