# 2. Radio Frequency Exposure

#### 2.1 Reference

According to §1.1307(b), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Report No.: DEFJ2311153

According to §1.1310 and §2.1091 RF exposure is calculated.

#### 2.2 RF Exposure Limit

#### 2.3 MPE Calculation Method

#### **Calculation**

Given

$$E = \frac{\sqrt{30 \times P \times G}}{d} \quad \& \quad S = \frac{E^2}{3770}$$

Where E = Field strength in Volts / meter

P = Power in Watts

G = Numeric antenna gain

*d* = Distance in meters

S = Power density in milliwatts / square centimeter

Combining equations and re-arranging the terms to express the distance as a function of the remaining variables yields:

Report No.: DEFJ2311153

$$S = \frac{30 \times P \times G}{3770d^2}$$

Changing to units of mW and cm, using:

$$P(mW) = P(W) / 1000$$
 and  $d(cm) = d(m) / 100$ 

**Yields** 

$$S = \frac{30 \times (P/1000) \times G}{3770 \times (d/100)^2} = 0.0796 \times \frac{P \times G}{d^2}$$
 Equation 1

From the EUT RF output power, the minimum mobile separation distance, d-0.2m, as well as the gain of the used antenna, the RF power density can be obtained.
