

Application Examiner

Re: Class II Permissive Change Application
FCC ID: 2AGZ3S01411

3 June 2022

Dear Telecommunications Certification Body Reviewer:

A request is made for a Class II permissive change of presently authorized equipment listed under FCC ID: 2AGZ3S01411. The request is to add the Titan 24 45 product as authorized equipment under FCC ID: 2AGZ3S01411. The difference between the original authorized equipment, Titan 24 90, and the requested authorized equipment, Titan 24 45, is a change in the antenna.

The antenna for Titan 24 45 product has a beam width of 45 degrees. The beam width for the Titan 24 90 antenna is 90 degrees. The same radio hardware circuitry is used on both radios with the exception of the antenna lens, which modifies the beam width from 90 degrees to 45 degrees. The patch array PCB is also the same for both radios.

Testing was completed as shown in the test report in order to verify compliance with the FCC requirements.

Thank you.

Sincerely,

A handwritten signature in black ink, appearing to read "Robert M. White".
