### 5.2 Decision of final test mode

The EUT was tested in conjunction with the accessories in Section 4.2. We tested all of the following test modes and selected the worst mode from the test results and recorded them in the report.

The test configuration modes are as the following:

Test Item	Test setup and operating modes
Radiated emission	30MHz-18GHz frequency range: Mode 1: Working mode (Full system) + CA02+ UAO2+ EA01+ AE Mode 2: Working mode (Full system) + CA02+ UAO2+ EB01+ AE
AC Conducted emission	Mode 1: Working mode (Full system) + CA02+ UAO2+ EA01+ AE Mode 2: Working mode (Full system) + CA02+ UAO2+ EB01+ AE
Note:	

1. All test modes are performed, only the worst cases test data are recorded in this report.
2. The worst case of radiated emission for 30MHz-1GHz is Mode 2 and for 1GHz -18GHz is Mode 2.
3. The worst case for conducted emission is mode 1.

### 5.3 EUT System Operation

1. Connect the EUT with AE.
2. Setup the EUT according to the standard.
3. Start testing and monitoring the function.
4. Working mode (Full system): The EUT is plugged into the POS System and powered by a power adapter that connects all accessories to the POS System. The computer establishes a pin connection with the POS System through the network cable. File transfer between SD card and POS System. The POS System simultaneously plays video from the USB flash drive.

## 6 Test Results

### 6.1 Radiated Emission

#### 6.1.1 Method of Measurement

- a. For 30MHz -1000MHz, the EUT was placed on the top of a rotating 0.8m table above the ground at a semi-anechoic chamber. The distance between the EUT and the received antenna was 3 meters. The table was rotated 360 degree and the received antenna mounted on a variable-height antenna tower was varied from 1m to 4m to find the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna were set during the measurement.
- b. For 1000MHz -18000MHz, the EUT was placed on the top of a 0.8m table above the ground at a 3m fully anechoic chamber. The maximal emission value was acquired by adjusting the antenna height, The table was rotated 360 degrees to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna were set during the measurement
