The lower limit applies at the boundary between the frequency ranges.

<b>Frequency(MHz)</b>	<b>Quasi-peak</b>	<b>Average</b>
0.15-0.5	79	66
0.5-30.0	73	60
Note: 1. The lower limit shall apply at the transition frequencies.		

### 2.3.2. Radiated Emissions

(a) FCC Part 15, Subpart C Section 15.109 The field strength of radiated emissions from a Class A digital device, as determined at a distance of 10 meters, shall not exceed the following:

## 7. RADIATED EMISSION TEST

### 7.1.Measurement Procedure

- d. All measurements were made at 3 meters.
- e. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3m meter open area test site. The table was rotated 360 degrees to determine the position of the highest radiation.
- f. The height of the equipment or of the substitution antenna shall be 0.8 m; the height of the test antenna shall vary between 1 m to 4 m. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

The frequency range from 30MHz to 1000MHz was pre-scanned with a peak detector (RBW=100kHz, VBW=300kHz) and all final readings of measurement from Test Receiver are Quasi-Peak values(Quasi Peak detector used with a bandwidth of 120 kHz).

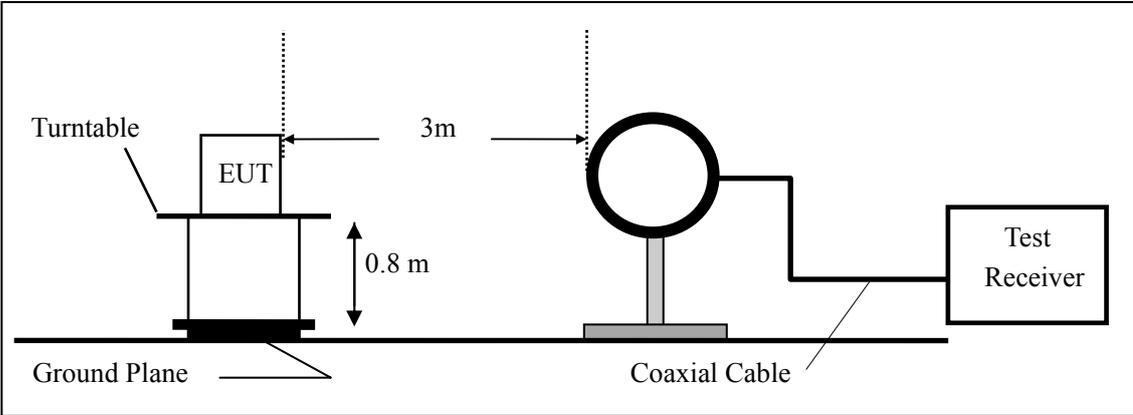

The frequency range above 1GHz the measuring instrument use RBW=1 MHz and VBW=3 MHz with Peak Detector for Peak Values, and use RBW=1 MHz and VBW=10 Hz with Peak Detector for Average Values.

- Note:** (1) All Readings are Peak Value and AV.  
(2) Emission Level= Reading Level+Probe Factor +Cable Loss  
(3) The average measurement was not performed when the peak measured data under the limit of average detection.  
(4)Data of measurement within this frequency range shown "--" in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured

## **8. BAND EDGES MEASUREMENT**

### 8.1. Standard Applicable

According to 15.249(d), out band emission except for harmonics shall be comply with §15.209 or at least attenuated by 50 dB below the level of the fundamental.

## **9. ANTENNA APPLICATION**

### **9.1. Standard Applicable**

According to §15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

### **9.2. Antenna Construction**

The EUT'S antenna is permanently integrated on the main EUT, no consideration of replacement. The antenna's gain is 0dBi and meets the requirement.
