RF EXPOSURE EVALUATION

1. PRODUCT INFORMATION

Product Description	Bluetooth FM Transmitter
Model Name	BT10M, MCC9-1033-BLK
FCC ID	2AHASBT10M

2. EVALUATION METHOD

According to 447498 D01 General RF Exposure Guidance v05 The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances \leq 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance,

mm)] \cdot [√f(GHz)] ≤ 3.0 for 1-g SAR and ≤ 7.5 for 10-g extremity SAR. Where f(GHz) is the RF channel transmit frequency in GHz Power and distance are rounded to the nearest mW and mm before calculation

3. CALCULATION

According to the follow transmitter output power (Pt) formula: Pt= (E x d) 2 / (30 x gt) Pt=transmitter output power in watts gt=numeric gain of the transmitting antenna (unitess) E=electric field strength in V/m d=measurement distance in meters (m)

BT:

Pt= 3.225dBm=2.10mW The result for RF exposure evaluation SAR=(2.10mW /5mm) .[$\sqrt{2.480}$ (GHz)]= 0.66<3.0 for 1-g SAR

FM: Pt=0.00000462 mW The result for RF exposure evaluation SAR=(0.00000462 mW /5mm) .[√0.881(GHz)]= 0.00000087<3.0 for 1-g SAR

Simultaneous transmission between Bluetooth and FM transmitter: [(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] • [√ f(GHz)/x] W/kg, for test separation distances ≤ 50 mm; where x = 7.5 for 1-g SAR and x = 18.75 for 10-g SAR. SAR=(0.66+0.00000087)/7.5=0.66000087W/kg<1.6W/kg

4. CONCLUSION

The SAR evaluation is not required.
