

# FCC ID: 2AHB3-A43

#### **Applied procedures / limit**

According to FCC §15.247(i) and §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

| Frequency<br>Range (MHz) | Electric Field<br>Strength (E)<br>(V/m) | Strength (E) Strength (H) Power De |            | Averaging Time<br> E  <sup>2</sup> , H  <sup>2</sup> or S<br>(minutes) |
|--------------------------|-----------------------------------------|------------------------------------|------------|------------------------------------------------------------------------|
| 0.3-3.0                  | 614                                     | 1.63                               | (100)*     | 6                                                                      |
| 3.0-30                   | 1842 / f                                | 4.89 / f                           | (900 / f)* | 6                                                                      |
| 30-300                   | 61.4                                    | 0.163                              | 1.0        | 6                                                                      |
| 300-1500                 |                                         |                                    | F/300      | 6                                                                      |
| 1500-100,000             |                                         |                                    | 5          | 6                                                                      |

#### . . . . . . . . ~ ... / Controlled E

Note: *f* is frequency in MHz

\* = Power density limit is applicable at frequencies greater than 100 MHz

| Frequency<br>Range (MHz) | Electric Field<br>Strength (E)<br>(V/m) | Magnetic Field<br>Strength (H)<br>(A/m) | Power Density (S)<br>(mW/ cm <sup>2</sup> ) | Averaging Time<br> E  <sup>2</sup> , H  <sup>2</sup> or S<br>(minutes) |  |

#### Limits for General Population / Uncontrolled Exposure

Note: f = frequency in MHz

\* = Plane-wave equivalent power density

### MPE PREDICTION

Predication of MPE limit at a given distance, Equation from OET Bulletin 65, Edition 97-01  $S=PG/4\pi R^2$ 

Where: S = power density

P = power input to antenna

G = power gain of the antenna in the direction of interest relative to an isotropic radiator

R = distance to the center of radiation of the antenna, R=0.2m

## **TEST RESULTS**

|      | Tune up<br>Produce<br>power | Maximum<br>peak<br>output<br>power<br>(dBm) | Output<br>power to<br>antenna<br>(mW) | Antenna<br>Gain<br>(numeric) | Power<br>Density<br>(S)<br>(mW/<br>cm2) | Limit<br>(mW<br>/ cm2<br>) | Result |
|------|-----------------------------|---------------------------------------------|---------------------------------------|------------------------------|-----------------------------------------|----------------------------|--------|
| WIFI | 14±1                        | 15                                          | 31.62                                 | 1.585(2dBi)                  | 0.00997                                 | 1                          | Pass   |

For the max result :  $0.00997 \le 1.0$ , compliance with FCC's RF Exposure
