

# FCC TEST REPORT

## FCC ID: 2AHB5-M3N

On Behalf of

# Zhejiang Hanshow Technology CO.,LTD.

## Electronic shelf label

# Model No.: Stellar-M3N@, Stellar-M3YN@, Stellar-MN@

Prepared for	: Zhejiang Hanshow Technology CO.,LTD.
Address	: Bld. 33, No. 966 xiuyuan Rd., BeiKeJian Innovation Park, XiuZhou
	District, Jiaxing, Zhejiang, PRC, PC 314000

Prepared By	: Shenzhen Alpha Product Testing Co., Ltd.
Address	: Building i, No.2, Lixin Road, Fuyong Street, Bao'an District, 518103,
	Shenzhen, Guangdong, China

Report Number	:	T1881224 01
Date of Receipt	:	August 01, 2018
Date of Test	:	August 01, 2018 - August 10, 2018
Date of Report	:	August 14, 2018
Version Number	:	REV0

## TABLE OF CONTENTS

1.       Summary of Standards And Results	De	escript	tion	Page
1.1. Description of Standards and Results       6         2. General Information       7         2.1. Description of Device (EUT)       7         2.2. Accessories of Device (EUT)       8         2.3. Tested Supporting System Details       8         2.4. Block Diagram of connection between EUT and simulators       8         2.5. Test Mode Description       8         2.6. Test Conditions       9         2.7. Test Facility       9         2.8. Measurement Uncertainty       9         2.9. Test Equipment List       10         3. Power Line Conducted Emission Test       11         3.1. Block Diagram of Test Setup       11         3.2. Test Inmits       11         3.3. Configuration of EUT on Test       12         3.4. Operating Condition of EUT       12         3.5. Test Procedure       12         3.6. Test Results       13         4. Radiated Emission Test       14         4.1. Block Diagram of Test Setup       14         4.2. Test Limit       15         4.3. Configuration of EUT on Test       16         4.4. Operating Condition of EUT       16         4.5. Test Procedure       16         4.6. Test Results       17         5.1.	1.	Sum	mary of Standards And Results	6
2. General Information       7         2.1. Description of Device (EUT)       7         2.2. Accessories of Device (EUT)       8         2.3. Tested Supporting System Details       8         2.4. Block Diagram of connection between EUT and simulators       8         2.5. Test Mode Description       8         2.6. Test Conditions       9         2.7. Test Facility       9         2.8. Measurement Uncertainty       9         2.9. Test Equipment List       10         3. Power Line Conducted Emission Test       11         3.1. Block Diagram of Test Setup       11         3.2. Test Limits       11         3.3. Configuration of EUT on Test       12         3.4. Operating Condition of EUT       12         3.5. Test Procedure       12         3.6. Test Results       13         3.7 Configuration of EUT on Test       14         4.1. Block Diagram of Test Setup       14         4.1. Block Diagram of Test Setup       14         4.1. Block Diagram of Test Setup       14         4.2. Test Limit       15         4.3. Configuration of EUT on Test       16         4.4. Operating Condition of EUT       16         4.5. Test Procedure       16				
2.1.       Description of Device (EUT)       7         2.2.       Accessories of Device (EUT)       8         2.3.       Tested Supporting System Details       8         2.4. ## TEST REPORT DECLARATION

Applicant	:	Zhejiang Hanshow Technology CO.,LTD.
Address	:	Bld. 33, No. 966 xiuyuan Rd., BeiKeJian Innovation Park, XiuZhou District, Jiaxing, Zhejiang, PRC, PC 314000
Manufacturer	:	Zhejiang Hanshow Technology CO.,LTD.
Address	:	Bld. 33, No. 966 xiuyuan Rd., BeiKeJian Innovation Park, XiuZhou District, Jiaxing, Zhejiang, PRC, PC 314000
EUT Description	:	Electronic shelf label
		(A) Model No. : Stellar-M3N@, Stellar-M3YN@, Stellar-MN@
		(B) Trademark : Hanshow

Measurement Standard Used:

#### FCC Rules and Regulations Part 15 Subpart C Section 15.249: 2017, ANSI C63.10:2013

The device described above is tested by Shenzhen Alpha Product Testing Co., Ltd. to determine the maximum emission levels emanating from the device and the severe levels of the device can endure and its performance criterion. The test results are contained in this test report and Shenzhen Alpha Product Testing Co., Ltd. is assumed full responsibility for the accuracy and completeness of test. Also, this report shows that the EUT is technically compliant with the FCC Part15 requirements.

This report applies to above tested sample only. This report shall not be reproduced in parts without written approval of Shenzhen Alpha Product Testing Co., Ltd.

# 1. SUMMARY OF STANDARDS AND RESULTS

### 1.1.Description of Standards and Results

The EUT have been tested according to the applicable standards as referenced below:

EMISSION					
<b>Description of Test Item</b>	Test Requirement	Standard Paragraph	Results		
Power Line Conducted Emission Test	FCC Part 15:2017	Section 15.207	N/A		
Spurious Emission Test	FCC Part 15:2017	Section 15.249&15.209	Р		
Occupied bandwidth	FCC Part 15:2017	Section 15.215	Р		
Band edge Requirement	FCC Part 15:2017	Section 15.249	Р		
Antenna Requirement	FCC Part 15:2017	Section 15.203	Р		
Note: 1. P is an abbreviation for Pass.					

2. F is an abbreviation for Fail.

3. N/A is an abbreviation for Not Applicable.

# 2. GENERAL INFORMATION

# 2.1.Description of Device (EUT)

Description	: Electronic shelf label
Model Number Diff	<ul> <li>Stellar-M3N@, Stellar-M3YN@, Stellar-MN@</li> <li>There is no difference between all the models, except the model name, so this report performs the model Stellar-M3N@.</li> </ul>
Trademark	: Hanshow
Test Voltage	: DC 3V From battery
Operation frequency	: 2402-2480MHz
Channel No.	: 157
Channel Separation	: 500KHz
Modulation type	: GFSK
Data Rate	: Downlink:500K bps Uplink:100K bps
Antenna Type	: PCB Antenna, max gain 0dBi.
Software version	: V1.0
Hardware version	: HS_EL5102_1M_56_01
Sample Type	: Prototype production

## 2.2.Accessories of Device (EUT)

Accessories 1 : N/A

## 2.3. Tested Supporting System Details

No.	Description	Manufacturer	Model	Serial Number	Certification or DOC
1	N/A	N/A	N/A	N/A	N/A

### 2.4.Block Diagram of connection between EUT and simulators

## 2.5.Test Mode Description

Test mode:

Mode		Channel	Frequency (MHz)		
GFSK		CH1	2402		
		CH80	2441		
		CH157	2480		
Note:	1. The test was used to control EUT work in Continuous TX mode, and select test				
Note.	channel, wireless mode				
	2. The EUT has been tested as an independent unit. And Continual Transmitting in				
	maximum power.				
	3. New battery is used during all test.				
	4. For the relevant Conducted Measurement, the temporary antenna connector is used				
	during the measurement. Antenna Connector Impedance: $50\Omega$ , Cable Loss: 1.0 dB				

#### Channel list:

Channel No.	Frequency (MHz)	Channel No.	Frequency (MHz)	Channel No.	Frequency (MHz)
1	2402			154	2478.5
2	2402.5	79	2440.5	155	2479
3	2403	80	2441	156	2479.5
4	2403.5	81	2441.5	157	2480

### 2.6.Test Conditions

Temperature range	21-25°C
Humidity range	40-75%
Pressure range	86-106kPa

### 2.7.Test Facility

Shenzhen Alpha Product Testing Co., Ltd. Building i, No.2, Lixin Road, Fuyong Street, Bao'an District, 518103, Shenzhen, Guangdong, China

June 21, 2018 File on Federal Communication Commission Registration Number: 293961

July 25, 2017 Certificated by IC Registration Number: 12135A

### 2.8.Measurement Uncertainty

(95% confidence levels, k=2)

Item	Uncertainty

## **3. POWER LINE CONDUCTED EMISSION TEST**

### 3.1.Block Diagram of Test Setup

### 3.2.Test Limits

	Maximum RF	Line Voltage
Frequency	Quasi-Peak Level	Average Level
	dB(µV)	dB(µV)
150kHz ~ 500kHz	66 ~ 56*	56 ~ 46*
500kHz ~ 5MHz	56	46
5MHz ~ 30MHz	60	50

- Notes: 1. Emission level=Read level + LISN factor-Preamp factor + Cable loss
  - 2. \* Decreasing linearly with logarithm of frequency.
  - 3. The lower limit shall apply at the transition frequencies.

### 3.3.Configuration of EUT on Test

The following equipment are installed on Power Line Conducted Emission Test to meet the commission requirement and operating regulations in a manner which tends to maximize its emission characteristics in a normal application.

### 3.4. Operating Condition of EUT

- (1) Setup the EUT as shown as Section 3.1.
- (2) Turn on the power of all equipment.
- (3) Let the EUT work in test mode taking the test.

### 3.5.Test Procedure

- (1) The EUT was placed on a non-metallic table, 80cm above the ground plane. The EUT Power connected to the power mains through a line impedance stabilization network (L.I.S.N. 1#). This provided a 50-ohm coupling impedance for the EUT (Please refer to the block diagram of the test setup and photographs). The other peripheral devices power cord connected to the power mains through a line impedance stabilization network (L.I.S.N.#2). Both sides of power line were checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipments and all of the interface cables were changed according to ANSI C63.10:2013 on conducted Emission test.
- (2) The frequency range from 150kHz to 30MHz is checked, the bandwidth of test receiver (R&S TEST RECEIVER ESCI) is set at 9kHz.
- (3) The frequency range from 30MHz to 1000MHz was pre-scanned with a Peak detector and all final readings of measurement from Test Receiver are Quasi-Peak and Average values.
- (4) The test results are reported on Section 3.6.

## 3.6.Test Results

EUT	:	Electronic shelf label	Test Date : N/A	
M/N	:	Stellar-M3N@	Temperature : N/A	
Test Engineer	:	N/A	Humidity : N/A	
Test Mode	:	N/A		
Test Results	:	N/A		
Note: 1. Not	app	plicable for equipment operated with batter	y power supply.	

## 4. RADIATED EMISSION TEST

### 4.1.Block Diagram of Test Setup

In Semi Anechoic Chamber (3m) Test Setup Diagram for 30MHz~1000MHz

In Semi Anechoic Chamber (3m) Test Setup Diagram for Above 1GHz

#### 4.2.Test Limit

Freq	uency	Distance	Field Strengths Limits				
М	Hz	(Meters)	uV/m	dB uV/m			
0.009	~ 0.490	300	2400/F(kHz)				
0.490	1.705	30	24000/F(kHz)				
1.705	30	30	30	29.5			
30	88	3	100(3nW)	40			
88	216	3	150(6.8nW)	43.5			
216	960	3	200(12nW)	46			
Abov	ve 960	3	500(75nW)	54			
Carrier f	requency	3	50000(avg)	113.97(peak) 93.97(avg)			

Notes: 1. Emission level = Read level + Antenna Factor - Preamp Factor + Cable Loss

2. The smaller limit shall apply at the cross point between two frequency bands.

3. Distance is the distance in meters between the measuring instrument, antenna and the closest point of any part of the device or system.

4. For frequencies above 1000 MHz, the field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.

### 4.3.Configuration of EUT on Test

The following equipment are installed on Radiated Emission Test to meet the commission requirements and operating regulations in a manner that tends to maximize its emission characteristics in normal application.

### 4.4.Operating Condition of EUT

- (1) Setup the EUT as shown as Section 4.1.
- (2) Turn on the power of all equipment.
- (3) Let the EUT work in test mode taking the test.

### 4.5.Test Procedure

- (1) The EUT was placed on a non-metallic table, 80 cm above the ground plane inside a semi-anechoic chamber for below 1GHz and 150 cm above the ground plane inside a semi-anechoic chamber for above 1GHz. An antenna was located 3m from the EUT on an adjustable mast. A pre-scan was first performed in order to find prominent radiated emissions. For final emissions measurements at each frequency of interest, the EUT were rotated and the antenna height was varied between 1m and 4m in order to maximize the emission. Measurements in both horizontal and vertical polarities were made and the data was recorded. In order to find the maximum emission, the relative positions of equipments and all of the interface cables were changed according to ANSI C63.10: 2013 on Radiated Emission test.
- (2) For the radiated emission test above 1GHz:

Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.

(3) Test antenna was located 4m from the EUT on an adjustable mast. Below pre-scan procedure was first performed in order to find prominent radiated emissions.(a) Change work frequency or channel of device if practicable.

(b) Change modulation type of device if practicable.

(c) Rotated EUT though three orthogonal axes to determine the attitude of EUT arrangement produces highest emissions

(4) For harmonic emissions test a appropriate high pass filter was inserted in the input port of AMP

- (5) The frequency range from 9KHz to 150KHz is checked, the bandwidth of test receiver (R&S TEST RECEIVER ESCI) is set at 200Hz. The frequency range from 150KHz to 30MHz is checked, the bandwidth of test receiver (R&S TEST RECEIVER ESCI) is set at 9KHz. The frequency range from 30MHz to 1000MHz is checked, the bandwidth of test receiver (R&S TEST RECEIVER ESCI) is set at 120kHz. The frequency range from above 1GHz is checked, the bandwidth of Signal Analyzer (Signal Analyzer N9020A) is set at 1MHz.
- (6) The frequency range from 30MHz to 1000MHz was pre-scanned with a peak detector and all final readings of measurement from Test Receiver are Quasi-Peak values, the frequency range from 1GHz to 6GHz was pre-scanned with a peak detector and all final readings of measurement from Spectrum Analyzer are peak and average values checked, all measurement distance is 3m in 3m semi anechoic chamber.
- (7) Test for all x, y, z axes is performed and only the worst case of X xes was recorded in the test report.
- (8) The test results are reported on Section 4.6.

## 5. BAND EDGE TEST

### 5.1.Block Diagram of Test Setup

#### 5.2.Test Limit

Please refer section 15.249 and section 15.205.

249(d) Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in section 15.209, whichever is the lesser attenuation.

249(e) As show in section 15.35(b), for frequencies above 1000MHz,the above field strength limits in paragraphs (a) and (b) of this section are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation. For point-to-point operation under paragraph (b) of this section, the peak filed strength shall not exceed 2500 millivolts/meter at 3meters along the antenna azimuth.

#### 5.3.Configuration of EUT on Test

The following equipment are installed on Radiated Emission Test to meet the commission requirements and operating regulations in a manner that tends to maximize its emission characteristics in normal application.

### 5.4. Operating Condition of EUT

- (1) Setup the EUT as shown as Section 5.1.
- (2) Turn on the power of all equipment.
- (3) Let the EUT work in test mode taking the test.

#### 5.5.Test Procedure

- (1) The EUT was placed on a non-metallic table, 150 cm above the ground plane inside a semi-anechoic chamber. An antenna was located 3m from the EUT on an adjustable mast. A pre-scan was first performed in order to find prominent radiated emissions. For final emissions measurements at each frequency of interest, the EUT were rotated and the antenna height was varied between 1m and 4m in order to maximize the emission. Measurements in both horizontal and vertical polarities were made and the data was recorded. In order to find the maximum emission, the relative positions of equipments and all of the interface cables were changed according to ANSI C63.10: 2013 on Radiated Emission test.
- (2) For the radiated emission test above 1GHz:

Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.

(3) Test antenna was located 4m from the EUT on an adjustable mast. Below pre-scan procedure was first performed in order to find prominent radiated emissions.(a) Change work frequency or channel of device if practicable.

(b) Change modulation type of device if practicable.

(c) Rotated EUT though three orthogonal axes to determine the attitude of EUT arrangement produces highest emissions

- (5) The frequency range from above 1GHz is checked, the bandwidth of Signal Analyzer (Signal Analyzer N9020A) is set at 1MHz.
- (6) The frequency range from 1GHz to 6GHz was pre-scanned with a peak detector and all final readings of measurement from Spectrum Analyzer are peak and average values checked, all measurement distance is 3m in 3m semi anechoic chamber.
- (7) Test for all x, y, z axes is performed and only the worst case of X xes was recorded in the test report.
- (8) The test results are reported on Section 5.6.

## 6.1.Block Diagram of Test Setup

#### 6.2.Test Limit

Please refer section 15.249 and section 15.205.

#### 6.3.Test Procedure

- (1) The bandwidth is measured at an amplitude level reduced 20dB from the reference level. The reference level is the level of the highest amplitude signal observed from the transmitter at the fundamental frequency. Once the reference level is established, the equipment is conditioned with typical modulating signal to produce the worst-case (i.e. the widest) bandwidth.
- (2) The test receiver RBW set 30KHz,VBW set 100KHz,Sweep time set auto.

EUT	: Electronic shelf label		Test Date :	2018.08.04		
M/N	: Stellar-M3N@	: Stellar-M3N@		24°C		
Test Engineer	: Reak	Reak		56%		
Test Mode	: TX 2402MHz,	: TX 2402MHz, TX 2441MHz, TX 2480MHz				
Test Results	: PASS					
Mode	Frequency	20dB Bandwidth	99% Bandwidth	Limit		
	MHz	(KHz)	(KHz)	(kHz)		
GFSK	2402	545.9	516.92	/		
GFSK	2441	565.7	536.16	/		
GFSK	2480	547.9	522.87	/		
Note: 1. The test results are listed in next pages.						

#### 6.4.Test Results

#### Frequency: 2402MHz

## Frequency: 2441MHz

#### Frequency: 2480MHz

# 7. ANTENNA REQUIREMENT

## 7.1.Standard Requirement

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

## 7.2. Antenna Connected Construction

The directional gains of antenna used for transmitting is 0dBi, and the antenna is PCB antenna no consideration of replacement. Please see EUT photo for details.

## 7.3.Results

The EUT antenna is PCB Antenna. It complies with the standard requirement.
