Information Function

To sort the information by contacts, the conversational arrangement, user understanding of the history of the entire communication information.

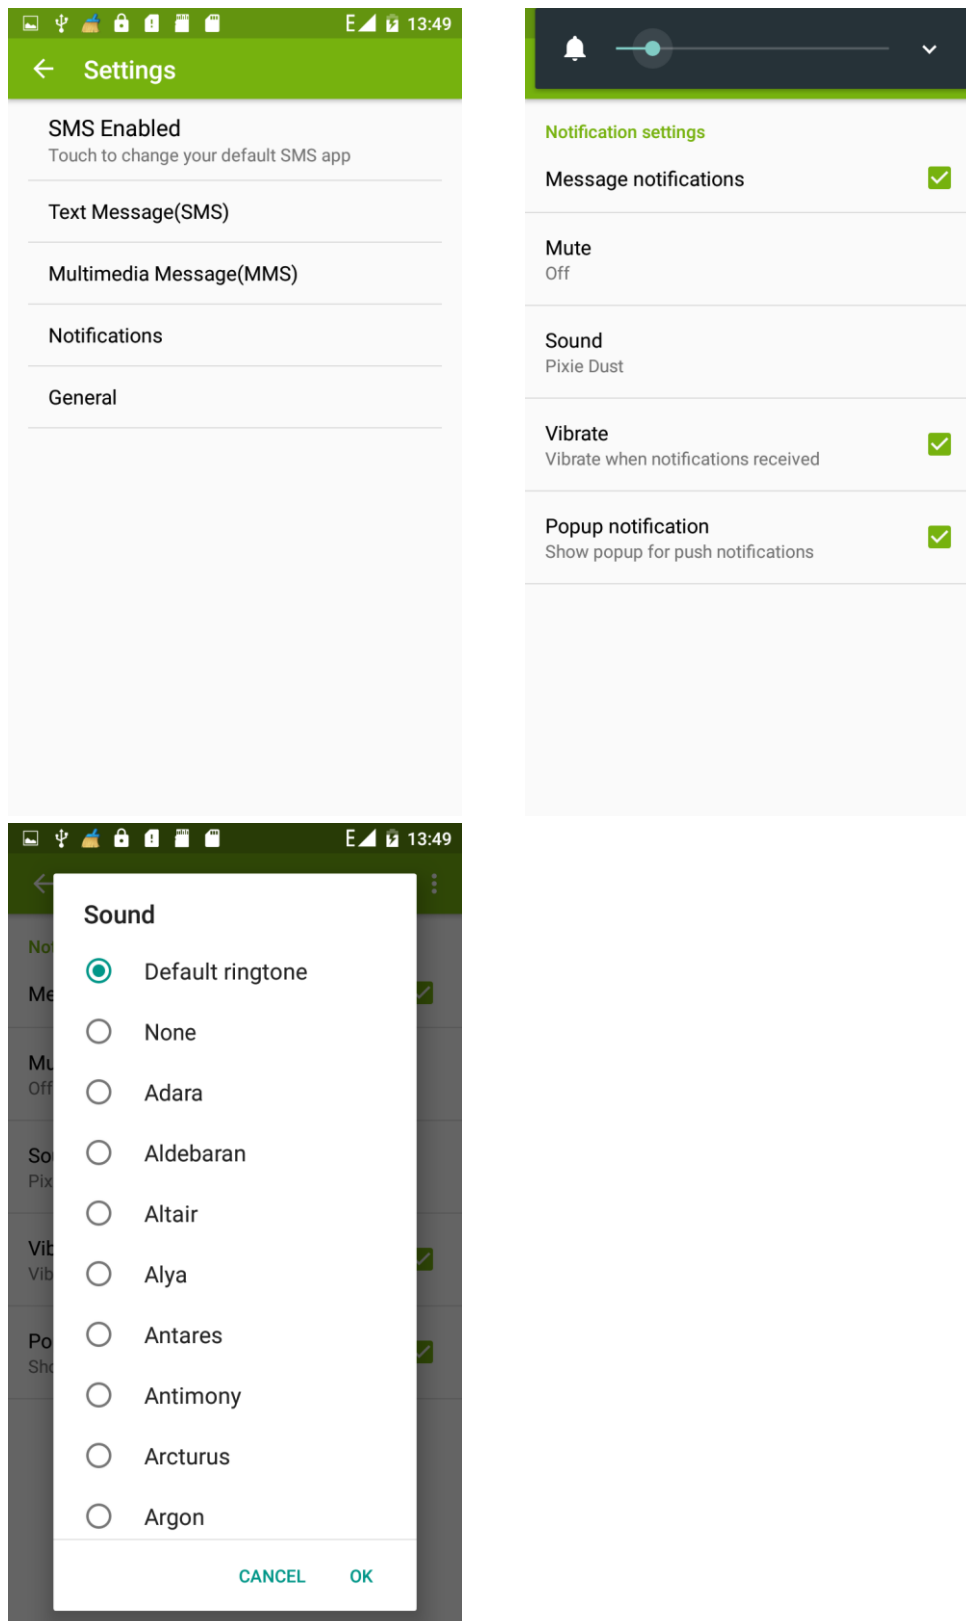

Send MMS

New information -click Attach button , add "function - " to select the desired additional content.

Replacement SMS reminder tone

Access to the information interface - "click the menu button, select "Settings "function ,select "Notifications "function ,Then select "sound.

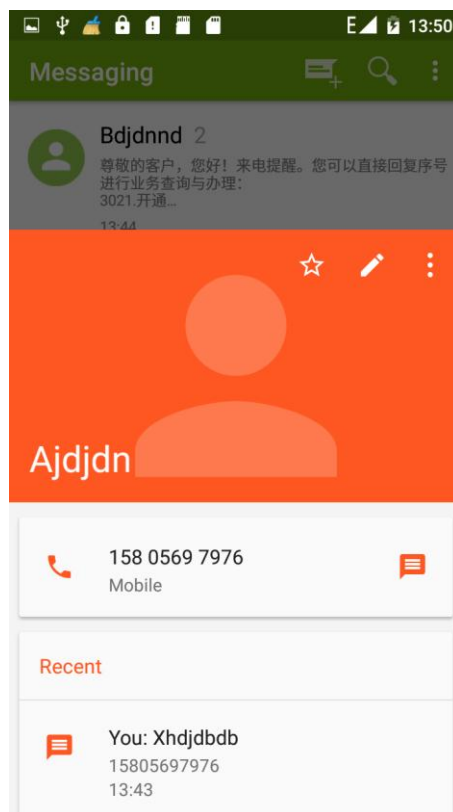

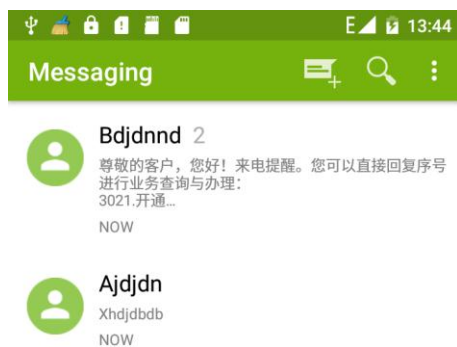

View the sender information

Access to the information screen - "Select the message - " click  -

" ,can view the sender information"-click ,can add to favorites".

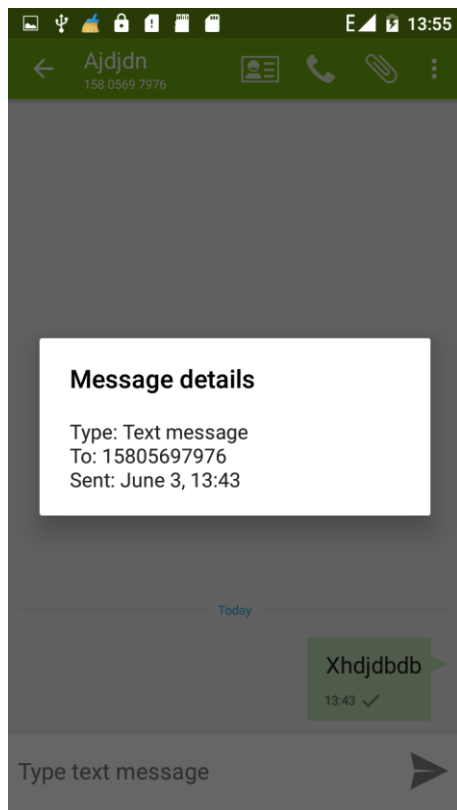

Forwards

Access to the information screen - "Select the message - "short press the message can display the message details" -Long press the Information, there shortcut keys - "select"Forward "function

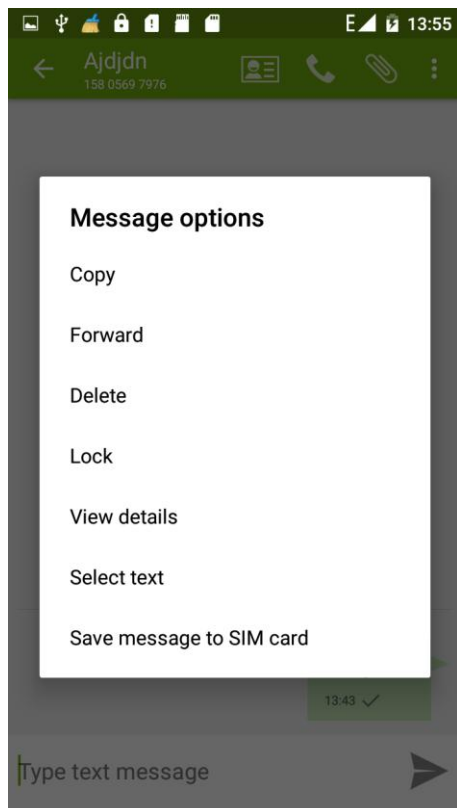

View information details

Access to the information screen- "Select the message-" Long press the Information, there shortcut keys -"select View details "function

Delete message

Access to the information screen - "Select the message - " Long press and Information, there shortcut keys - "select "Delete "function

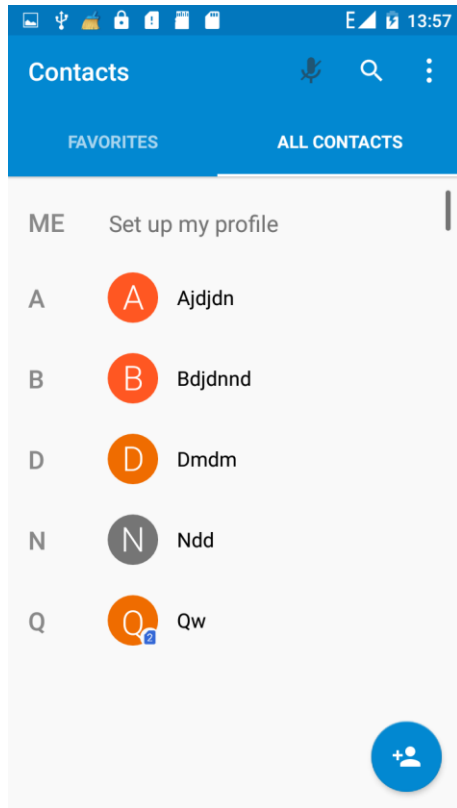

Contact Features

contacts groups, contacts and favorites feature;

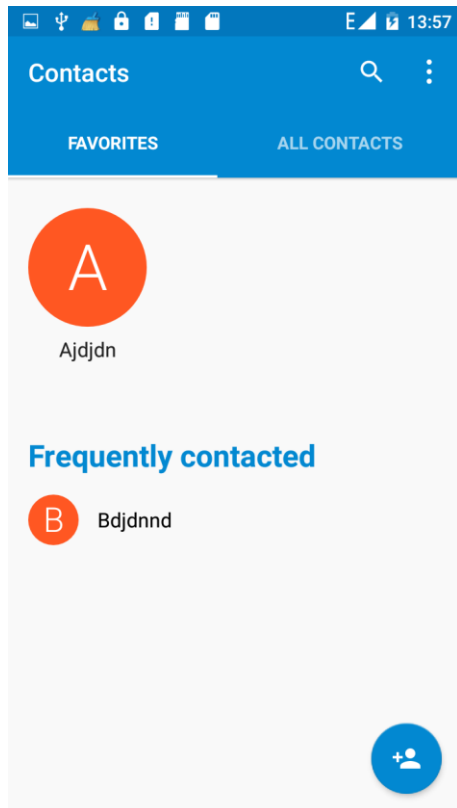

Book description

By the first number, then sort the way English characters (A-Z)

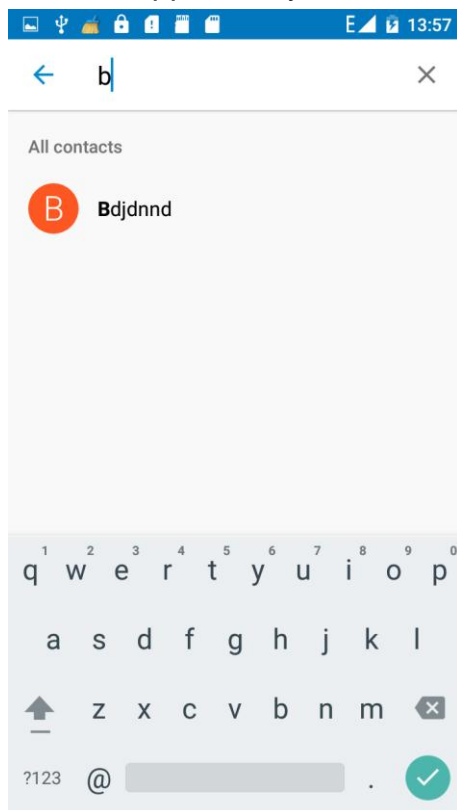

Favorites Introduction:

Included collection of contacts, and users often call the recent contact information, part of the overall fabric Top of the contact information for the user collection, lower often call into the system default contact information;

Contact Search

Into the contact interface - "click  button
Search supported by the first letter and the entire search string

Import contact information methods

using Bluetooth to achieve data synchronization

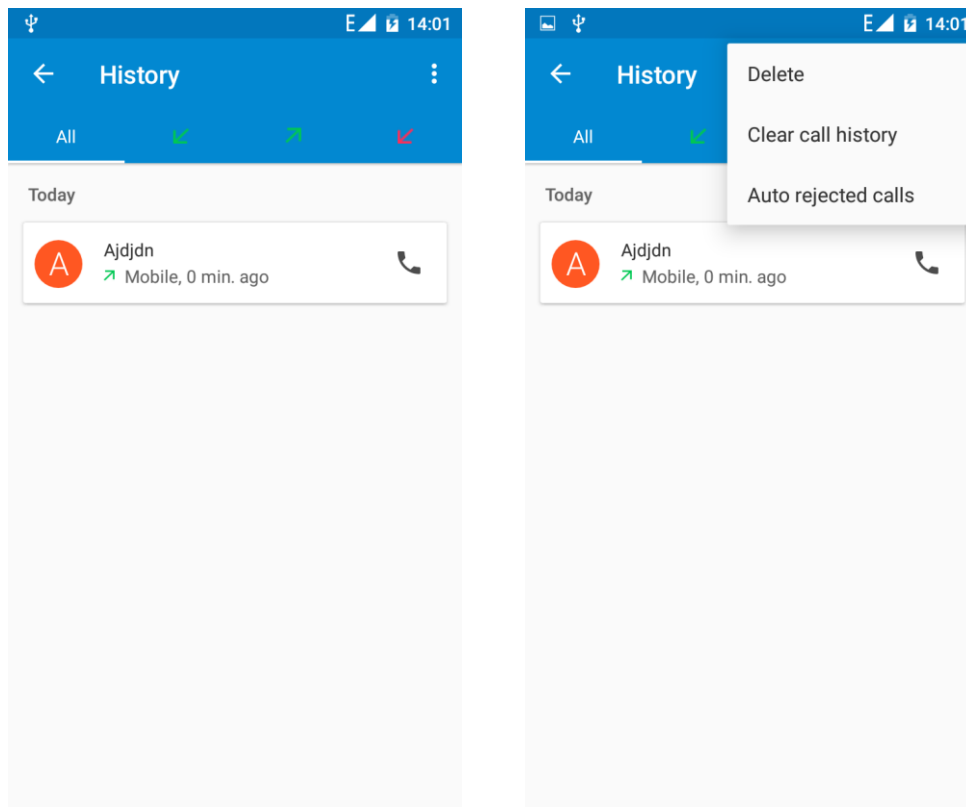

Itel phone using Bluetooth to achieve synchronization of contacts;

Call History Features

One by one to delete call records

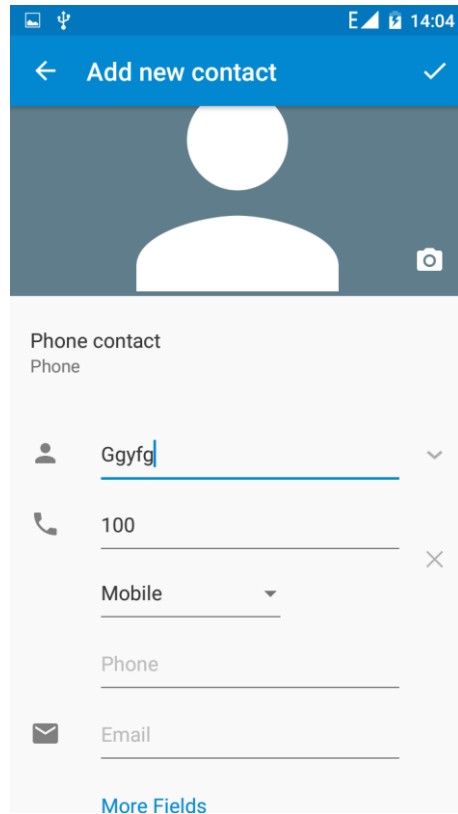

Enter the call log interface - "Click the menu button –Select the delete

Function- " Choose the delete call records.

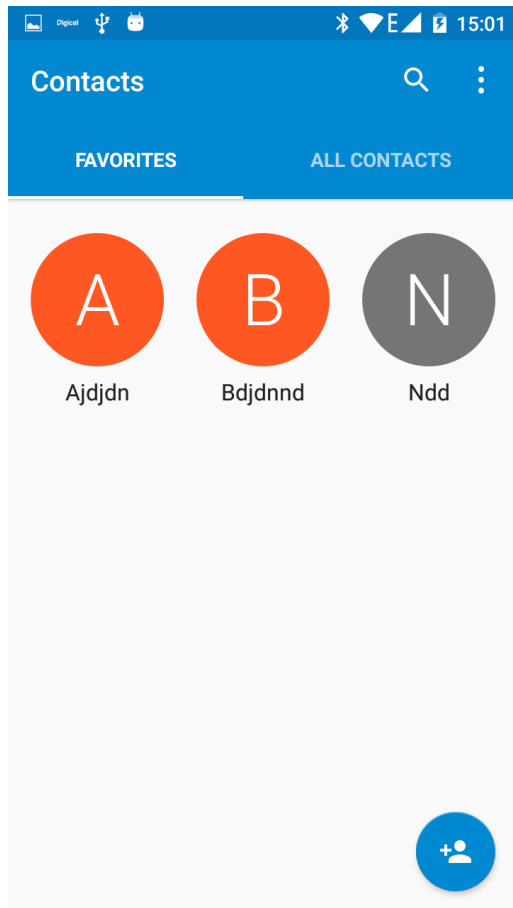

Add Contact from Call log

Enter the call log screen - "enter the number - " click- "select "Add to Contacts " feature Or directly into the call log entry, -click  button -select "Add to Contacts "feature.

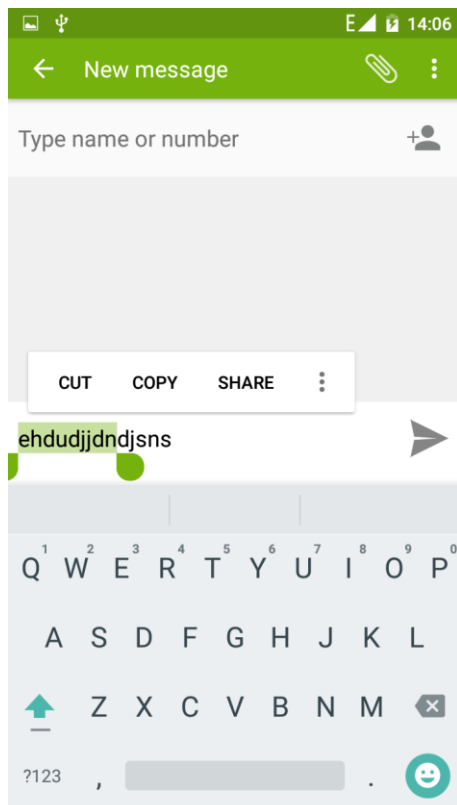

Dail and caller ID display Features

New dial-up procedures will be according to your habits, automatic intelligent recommend commonly used contact, convenient to speed dial, Some well-known enterprises or service of the number of the caller, using Google's online database for matching automatically display name.

Paste the text / copy Features

Into the input field - "input string, long press and have options.

E-mail Features

Configuring mail account

Enter the Program Group screen - "Select"Email"application -"Enter e-mail address and password

If the system automatically recognizes the mailbox information, will automatically configure; if the system does not recognize, will require users to type IMAP mailbox, or POP3, enter the appropriate configuration information.

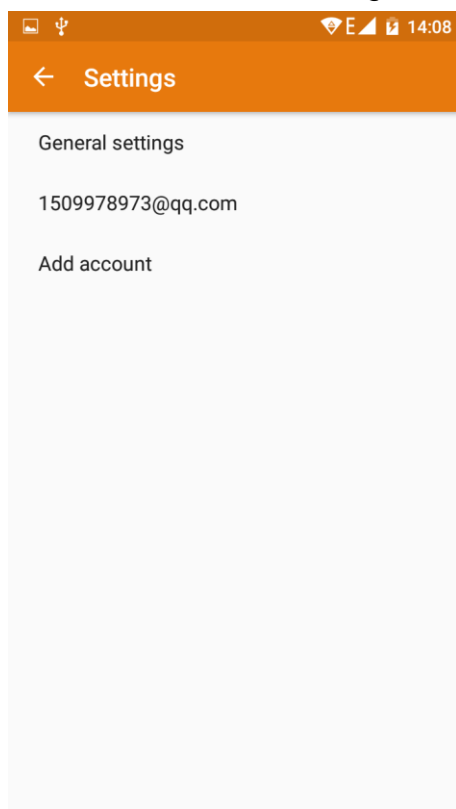

For example:

E-mail Address: 150997*****@qq.com

Password:

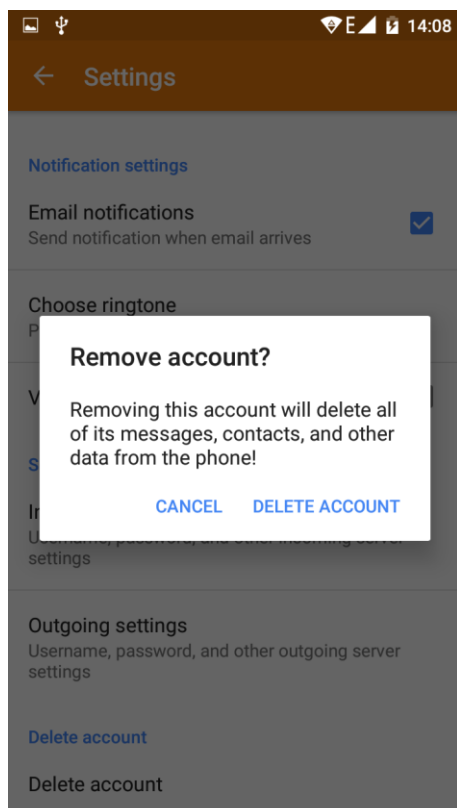

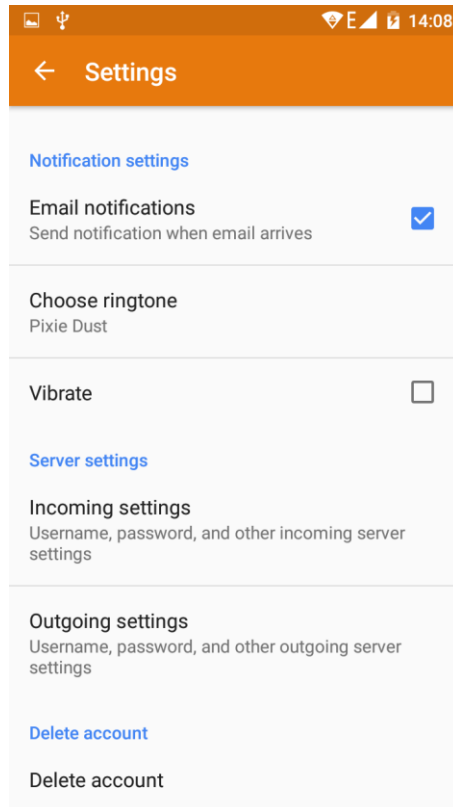

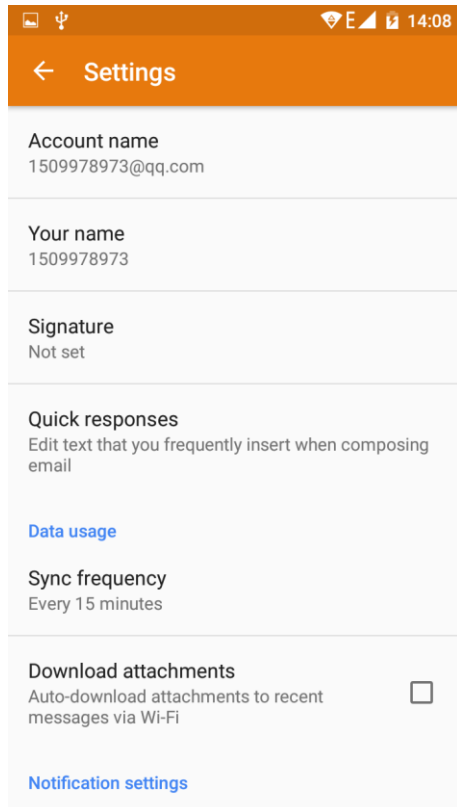

Configure multiple email accounts

Enter the Program Group screen - "Select"Email"application -" Click on the menu button-select setting function -select "Add Account"feature

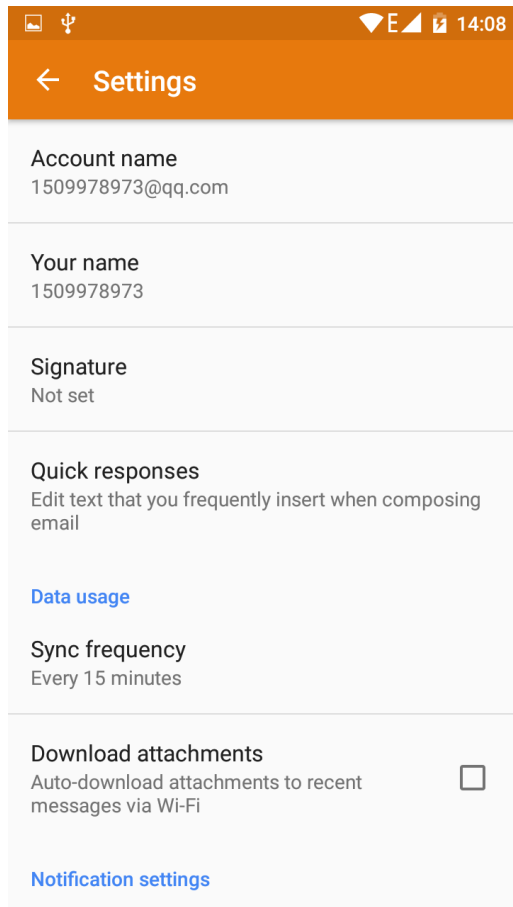

Remove email account

Enter the Program Group screen - Select"Settings" - Click "Accounts"-there have a delete account.

Email check frequency setting

Enter the Program Group screen - Select "Settings" application - Click on the menu button-select setting function –select account - " select I box check frequency "function

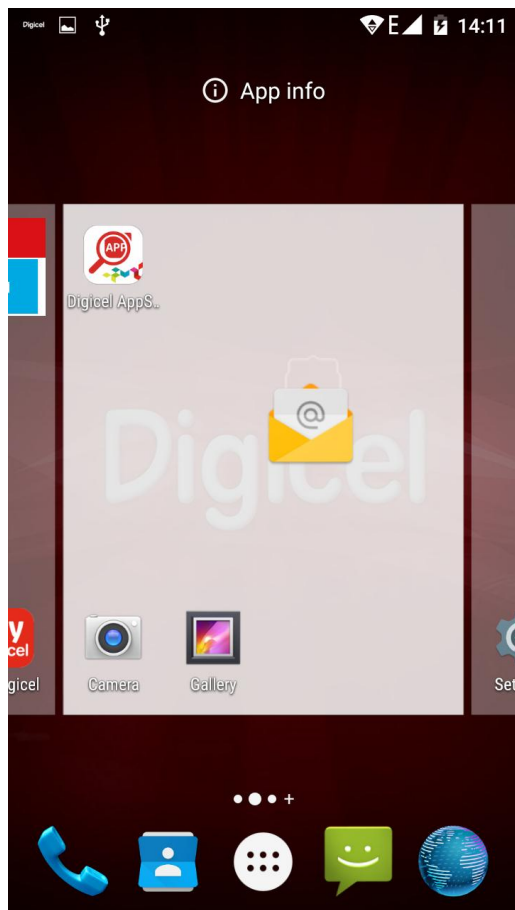

Desktop Features

The common features into the desktop

Interface into the program group - "Select the desktop into the application

- "long by application, the application will be placed to the desktop;

Wallpapers

In the desktop space - the "long Click the desktop, the shortcut keys
-"Select"Wallpaper"feature.

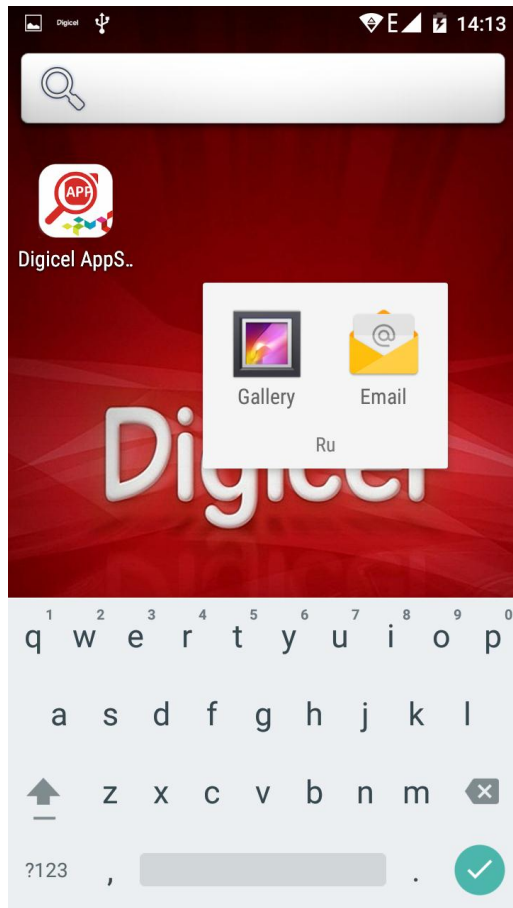

Application Packet

In the desktop space – sliding the application to another application – click the application to open New Folder

Into the Contacts application, click the menu button, select "Import Contacts", then you can see the SIM card contacts, if only to import one, you can click an item. If all the import needs to long press the menu key, select Import to import all.

25. why the message has a different time and date display

Message displayed on the principle that the display of the day time and date have shown that non-day

26. GO502 HD whether to support the Java

GO502 HD support Java,

27.How to open developer options

Enter the Settings -- the About phone -- click the Build number five times, system will be generated developer options

FCC Statement:

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

SAR Information Statement

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and

certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is **0.247W/Kg** and when worn on the body, as described in this user guide, is **0.396W/Kg**(Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). The maximum scaled SAR in hotspot mode is **0.615 W/Kg**. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on

FCC ID: 2AHDFGO502HD Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 10mm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
