# **Test Report**

**Report No.:** CQASZ20200901065E-01

Applicant: ChicagoTronics, Inc.

Address of Applicant: 1736 W. Pierce Avenue. Chicago, Illinois USA

**Equipment Under Test (EUT):** 

**EUT Name:** Wireless keyboard

Model No.: CKM620K

Brand Name: Skilcraft

FCC ID: 2AHKSCKM620K

**Standards:** 47 CFR Part 15, Subpart C

**Date of Receipt:** 2020-09-17

**Date of Test:** 2020-09-17 to 2020-10-12

Date of Issue: 2020-10-12
Test Result: PASS\*

\*In the configuration tested, the EUT complied with the standards specified above

Tested By:

(Tiny You)

Sheek Luo

(Jack Ai)

The test report is effective only with both signature and specialized stamp, The result(s) shown in this report refer only to the sample(s) tested. Without written approval of CQA, this report can't be reproduced except in full.

## 4 General Information

### **4.1 Client Information**

Applicant:	ChicagoTronics, Inc.
Address of Applicant:	1736 W. Pierce Avenue. Chicago, Illinois USA
Manufacturer:	Dongguan Lingjie Electronics & Technology Co Ltd
Address of Manufacturer:	No.16 Zhenxing North Road, Xiegang, Dongguan, China.
Factory:	Dongguan Lingjie Electronics & Technology Co Ltd
Address of Factory:	No.16 Zhenxing North Road, Xiegang, Dongguan, China.

## 4.2 General Description of EUT

Product Name:	Wireless keyboard
Model No.:	CKM620K
Trade Mark:	Skilcraft
Hardware Version:	V 2.0
Software Version:	V 7.0
Frequency Range:	2403.85M-2479.85MHz
Modulation Type:	GFSK
Number of Channels:	16 (declared by the client)
Sample Type:	☐ Mobile ☐ Portable ☐ Fix Location
Test Software of EUT:	RF test (manufacturer declare)
Antenna Type:	PCB antenna
Antenna Gain:	1.8dBi
Power Supply:	1*AAA battery, DC 1.5V

Report No.: CQASZ20200901065E-01

Operation Frequency each of channel								
Channel Frequency Channel Frequency Channel Frequency								
1	2403.85MHz	5	2422.85MHz	9	2441.85MHz	13	2463.85MHz	
2	2407.85MHz	6	2426.85MHz	10	2445.85MHz	14	2466.85MHz	
3	2414.85MHz	7	2436.85MHz	11	2453.85MHz	15	2473.85MHz	
4	2419.85MHz	8	2439.85MHz	12	2459.85MHz	16	2479.85MHz	

#### Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

Channel	Frequency
The lowest channel (CH1)	2403.85MHz
The middle channel (CH9)	2441.85MHz
The highest channel (CH16)	2479.85MHz

Report No.: CQASZ20200901065E-01

#### 4.3 Test Environment and Mode

Operating Environment	Operating Environment:				
Radiated Emissions:					
Temperature:	25.5 °C				
Humidity:	51 % RH				
Atmospheric Pressure:	1009mbar				
Radio conducted item to	Radio conducted item test (RF Conducted test room):				
Temperature:	25.2 °C				
Humidity:	55 % RH				
Atmospheric Pressure:	1009mbar				
Test mode:					
Transmitting mode:	Use test software (RF test) to set the lowest frequency, the middle frequency and the highest frequency keep transmitting of the EUT.				

#### 4.4 Description of Support Units

The EUT has been tested with associated equipment below.

Description	Manufacturer	Model No.	Remark	FCC certification
/	/	/	/	/

### 4.5 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate.

The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities.

The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16 - 4 "Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements" and is documented in the **Shenzhen Huaxia Testing Technology Co., Ltd** quality system acc. to DIN EN ISO/IEC 17025.

Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for **CQA** laboratory is reported:

Test	Range	Uncertainty	Notes
Radiated Emission	Below 1GHz	5.12dB	(1)
Radiated Emission	Above 1GHz	4.60dB	(1)
Conducted Disturbance	0.15~30MHz	3.34dB	(1)

<sup>(1)</sup>This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Report No.: CQASZ20200901065E-01

#### 4.6 Test Location

All tests were performed at:

Shenzhen Huaxia Testing Technology Co., Ltd.,

1F., Block A of Tongsheng Technology Building, Huahui Road, Dalang Street, Longhua District, Shenzhen, China

### 4.7 Test Facility

#### A2LA (Certificate No. 4742.01)

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 4742.01.

#### • FCC Registration No.: 522263

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration No.:522263

#### 4.8 Deviation from Standards

None

#### 4.9 Abnormalities from Standard Conditions

None.

### **4.10 Other Information Requested by the Customer**

None.

Report No.: CQASZ20200901065E-01

### **4.11 Equipment List**

#### Note:

The temporary antenna connector is soldered on the PCB board in order to perform conducted tests and this temporary antenna connector is listed in the equipment list.

Report No.: CQASZ20200901065E-01

### 5 Test results and Measurement Data

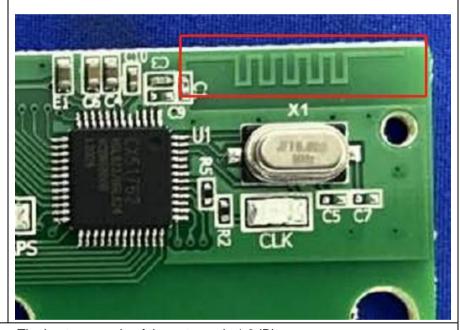

### 5.1 Antenna Requirement

**Standard requirement:** 47 CFR Part 15C Section 15.203

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### **EUT Antenna:**

The antenna is PCB antenna. The best case gain of the antenna is 1.8dBi.

Report No.: CQASZ20200901065E-01

### 5.2 Radiated Emission

Report No.: CQASZ20200901065E-01

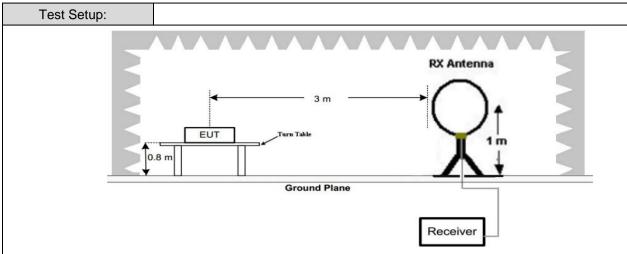

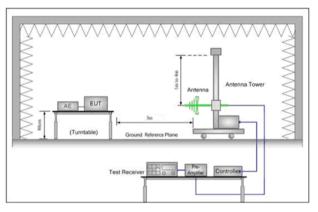

Figure 1. Below 30MHz

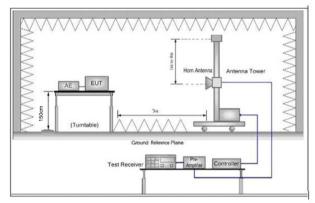

Figure 2. 30MHz to 1GHz

Figure 3. Above 1 GHz

#### Test Procedure:

- a. 1) Below 1G: The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
  - 2) Above 1G: The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.

Note: For the radiated emission test above 1GHz:

Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.

- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of

	<ul> <li>below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> </ul>		
	<ul> <li>f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be retested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.</li> <li>g. Test the EUT in the lowest channel,the middle channel,the Highest channel</li> <li>h. The radiation measurements are performed in X, Y, Z axis positioning for</li> </ul>		
	Transmitting mode, And found the X axis positioning which it is worse case.  i. Repeat above procedures until all frequencies measured was complete.		
Exploratory Test Mode:	Transmitting mode		
Final Test Mode:	Pretest the EUT at Transmitting mode, For below 1GHz part, through pre-scan, the worst case is the middle channel.		
	Only the worst case is recorded in the report.		
Test Results:	Pass		

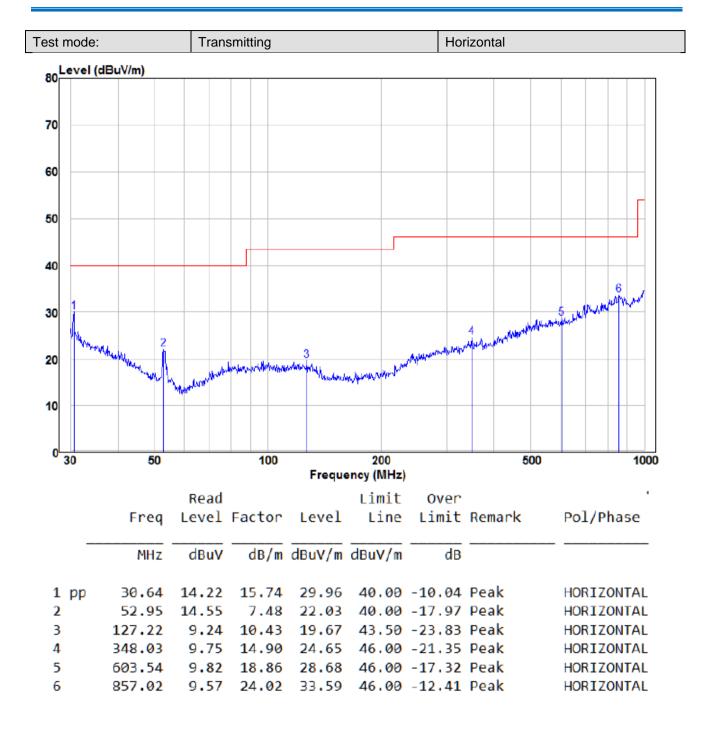

Report No.: CQASZ20200901065E-01

#### Remark:

- 1) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:
  - Final Test Level = Receiver Reading + Antenna Factor + Cable Factor Preamplifier Factor
- 2) Scan from 9kHz to 25GHz, The disturbance above 10GHz and below 30MHz was very low, and the above harmonics were the highest point could be found when testing, so only the above harmonics had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported.
