Permissive Change Application

On behalf of Radio Solutions, Inc. I hereby apply for permissive change to the industrial Part 90 signal booster with FCC ID: **2AHVPSB400M2A**

The change is limited to increase in frequency coverage down to 406.1 (from the existing 450MHz) and up to 512MHz (from the current 490MHz).

The extended range is accomplished with a factory firmware (software) update.

The unit has no field programmable or user programable parameters that would affect the frequency coverage of the device.

Sincerely

A handwritten signature in blue ink, appearing to read 'Admir Surkovic', with a stylized flourish at the end.

Admir Surkovic - CEO, CTO
