Report No.: GTS201611000003E05

## **FCC** Report

Applicant:	SHENZHEN GIEC DIGITAL CO., LTD		
Address of Applicant:	No.1 Building,Factory,No.7 District,Dayang Development Areas,FuYongStreet,Baoan,Shenzhen,China		
Equipment Under Test (E	EUT)		
Product Name:	Tablet PC		
Model No.:	TM101W635L, GK-MER1027, TM101W638L,GK-MEV1027		
FCC ID:	2AHYKTM1011		
Applicable standards:	FCC CFR Title 47 Part 15 Subpart B:2015		
Date of sample receipt:	November 01, 2016		
Date of Test:	November 02-17, 2016		
Date of report issue:	November 18, 2016		
Test Result :	PASS *		

\* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Robinson Lo Laboratory Manager

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the GTS product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of GTS or testing done by GTS in connection with, distribution or use of the product described in this report must be approved by GTS in writing.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

## 4 Test Summary

Test Item	Section in CFR 47	Result
Conducted Emission	Part15.107	PASS
Radiated Emissions	Part15.109	PASS

PASS: The EUT complies with the essential requirements in the standard.

Remark : Test according to ANSI C63.4:2014.

## 4.1 Measurement Uncertainty

Test Item	Frequency Range	Measurement Uncertainty	Notes
Radiated Emission	9kHz ~ 30MHz	± 4.34dB	(1)
Radiated Emission	30MHz ~ 1000MHz	± 4.24dB	(1)
Radiated Emission	1GHz ~ 26.5GHz	± 4.68dB	(1)
AC Power Line Conducted Emission	0.15MHz ~ 30MHz	± 3.45dB	(1)
Note (1): The measurement unce	ertainty is for coverage factor of k	=2 and a level of confidence of s	95%.

## **5** General Information

## 5.1 Client Information

Applicant:	SHENZHEN GIEC DIGITAL CO., LTD
Address of Applicant:	No.1 Building,Factory,No.7 District,Dayang Development Areas,FuYongStreet,Baoan,Shenzhen,China
Manufacturer:	SHENZHEN GIEC DIGITAL CO., LTD
Address of Manufacturer:	No.1 Building, Factory, No.7 District, Dayang Development Areas, FuYongStreet, Baoan, Shenzhen, China

## 5.2 General Description of EUT

Product Name:	Tablet PC				
Model No.:	M101W635L, GK-MER1027, TM101W638L,GK-MEV1027				
Test Model:	TM101W635L				
Remark: All above models are identical in the same PCB layout, interior structure and eleccircuits. The only difference is the model name and battery capacity for commercial purpose.					
Power Supply:	Quick Charger:				
	Model:A68-502000				
	Input: AC 100-240V, 50/60Hz, 0.35A				
	Output: DC 5V, 2A				
	or				
DC 3.7V 6000mAh Li-ion Battery for TM101W635L and GK-M DC 3.7V 6800mAh Li-ion Battery for TM101W638L and GK-M					

## 5.3 Test mode

Test mode:	
HDMI mode	Keep the EUT in HDMI mode
REC mode	Keep the EUT in video record mode.
USB playing mode	Keep the EUT in USB flash disk playing mode.
TF card playing mode	Keep the EUT in SD card playing mode.
Buring test mode	Keep the EUT in PC working mode

## 5.4 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

## • FCC — Registration No.: 600491

Global United Technology Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Registration 600491, June 22, 2016.

## • Industry Canada (IC) — Registration No.: 9079A-2

The 3m Semi-anechoic chamber of Global United Technology Services Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 9079A-2, August 15, 2016.

## 5.5 Test Location

All tests were performed at:

Global United Technology Services Co., Ltd.

No. 301-309, 3/F., Jinyuan Business Building, No.2, Laodong Industrial Zone, Xixiang Road, Baoan District, Shenzhen, Guangdong, China 518102

Tel: 0755-27798480

Fax: 0755-27798960

## 5.6 Description of Support Units

Manufacturer	Description	Model	Serial Number	FCC ID/DoC
DELL	KEYBOARD	SK-8115	N/A	DOC
DELL	MOUSE	N/A	N/A	DOC

## 5.7 Deviation from Standards

Biconical, log.per. antenna and horn antenna were used instead of dipole antenna. Semi-anechoic Chamber was used as alternation of open air test sites, and all test suites were performed with radiated method in it.

## 5.8 Abnormalities from Standard Conditions

None.

## 5.9 Other Information Requested by the Customer

None.

## 6 Test Instruments list

## 7 Test Results and Measurement Data

## 7.1 Conducted Emissions

			1			
Test Requirement:	FCC Part15 B Section 15.107					
Test Method:	ANSI C63.4:2014					
Test Frequency Range:	150KHz to 30MHz					
Class / Severity:	Class B					
Receiver setup:	RBW=9KHz, VBW=30KHz, S	weep time=auto				
Limit:		Limit (dBuV)				
	Frequency range (MHz)	Quasi-peak	Average			
	0.15-0.5	66 to 56*	56 to 46*			
	0.5-5	56	46			
	5-30	60	50			
	* Decreases with the logarithm	* Decreases with the logarithm of the frequency.				
Test setup:	Reference Plane					
	40cm       80cm         Filter       AC power         Equipment       E.U.T         Filter       AC power         End       E.U.T         Fest table/Insulation plane       E.U.T         Remark:       E.U.T. Equipment Under Test         LISN: Line Impedence Stabilization Network       Test table height=0.8m					
Test procedure:	<ol> <li>The E.U.T and simulators are connected to the main power through a line impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH coupling impedance for the measuring equipment.</li> <li>The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs).</li> <li>Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed</li> </ol>					
	according to ANSI C63.4: 2					
Test Instruments:	Refer to section 6 for details					
Test mode:	Refer to section 5.3 for details					
Test results:	Pass					

## GTS

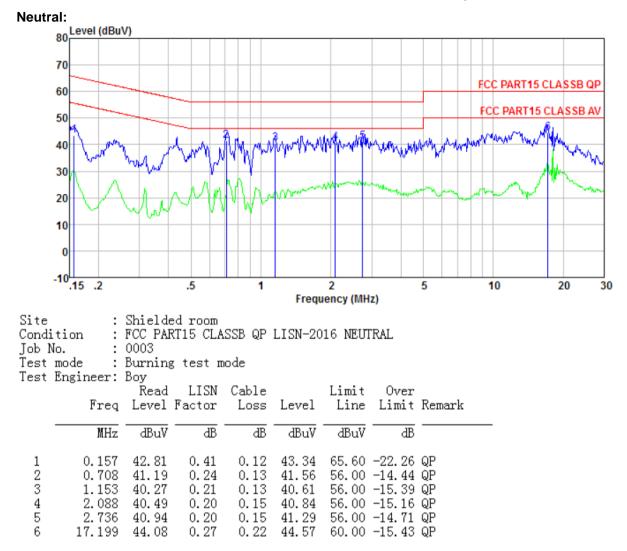

## Report No.: GTS201611000003E05

#### Measurement Data

### Line:

Notes:

1. An initial pre-scan was performed on the line and neutral lines with peak detector.

2. Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission.

3. Final Level =Receiver Read level + LISN Factor + Cable Loss

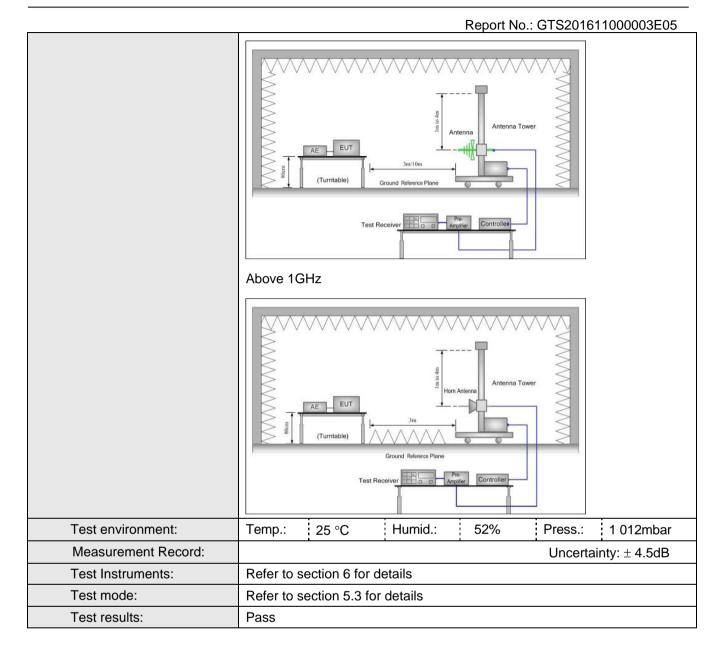

4. If the average limit is met when using a quasi-peak detector receiver, the EUT shall be deemed to meet both limits and measurement with the average detector receiver is unnecessary.

## 7.2 Radiated Emission

Test Requirement:         FCC Part15 B Section 15.109           Test Method:         ANSI C63.4:2014           Test Frequency Range:         30MHz to 25GHz           Test site:         Measurement Distance: 3m (Semi-Anechoic Chamber)           Receiver setup:         Frequency         Detector         RBW         VBW         Remark.           30MHz         Quasi-peak         120kHz         300kHz         Quasi-peak Value         Quasi-peak Value           Limit:         Frequency         Limit (dBuV/m @3m)         Remark.           30MHz-286MHz         40.00         Quasi-peak Value           216MHz-2660MHz         46.00         Quasi-peak Value           216MHz-960MHz         46.00         Quasi-peak Value           960MHz-1GHz         54.00         Average Value           960MHz-1GHz         54.00         Average Value           Above 1GHz         74.00         Peak Value           74.00         Peak Value         Procedure:         1. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation.         2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.           8. The antenna height is varied from one meter to four meters above	T.2 Radiated Emission			2

	Test setup:	Below 1GHz	Below 1GHz					

Note:

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level =Receiver Reading + Antenna Factor + Cable Factor – Preamplifier Factor

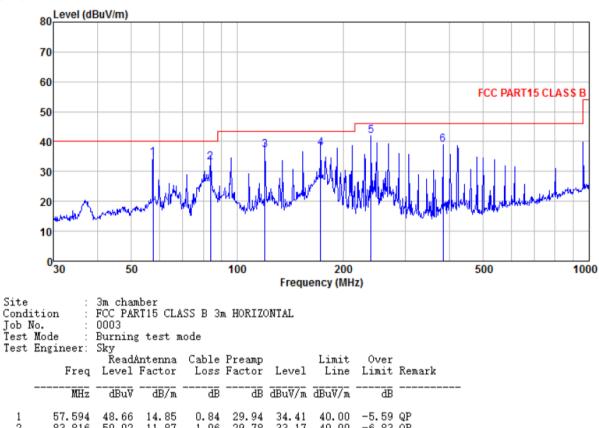

For above 1GHz test ,1GHz to 25GHz all have been tested, only worse case 1GHz to 6GHz is reported, from 6GHz to 25GHz, no emission is found.
