# **3.RF Exposure Requirement**

### 3.1. Uncontrolled Environment

Uncontrolled Environments are defined as locations where there is the exposure of individuals who have no knowledge or control of their exposure. The general population/uncontrolled exposure limits are applicable to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Members of the general public would come under this category when exposure is not employment-related; for example, in the case of a wireless transmitter that exposes persons in its vicinity.

### 3.2. Controlled Environment

Controlled Environments are defined as locations where there is exposure that may be incurred by persons who are aware of the potential for exposure, (i.e. as a result of employment or occupation). In general, occupational/controlled exposure limits are applicable to situations in which persons are exposed as a consequence of their employment, who have been made fully aware of the potential for exposure and can exercise control over their exposure. The exposure category is also applicable when the exposure is of a transient nature due to incidental passage through a location where the exposure levels may be higher than the general population/uncontrolled limits, but the exposure person is fully aware of the potential for exposure and can exercise control over their exposure and can exercise control over his or her exposure by leaving the area or by some other appropriate means.

### 3.3. RF Exposure Limit

### **Basic Restrictions Reference levels**

Basic Restriction for electric, magnetic and electromagnetic fields (0 Hz to 300 GHz)

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm <sup>2</sup> )	Averaging time (minutes)
	(A) Limits for C	Occupational/Controlled Expos	ure	
0.3-3.0	614	1.63	* 100	6
3.0-30	1842/f	4.89/f	* 900/f <sup>2</sup>	6
30-300	61.4	0.163	1.0	6
300-1,500			f/300	6
1,500-100,000			5	6
	(B) Limits for Gene	eral Population/Uncontrolled Ex	posure	-
0.3-1.34	614	1.63	* 100	30
1.34-30 824/f		2.19/f	* 180/f <sup>2</sup>	30
30-300	27.5	0.073	0.073 0.2	
300-1,500			f/1500	30
1,500-100,000			1.0	30

f = frequency in MHz

\* = Plane-wave equivalent power density

**Note:** Emissions between 100 kHz to 300 kHz should be assessed versus the limits at 300 kHz in Table 1: 614 V/m and 1.63 A/m.

### 3.4. Test Information

The EUT working at normal charging mode, use the E-Probe measure the H-field Strength, E-field Strength separately.
