

# FCC ID:2AI6I-PJ202

#### Applied procedures / limit

According to FCC §15.247(i) and §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

| Frequency<br>Range (MHz) | Electric Field<br>Strength (E)<br>(V/m) | Magnetic Field<br>Strength (H)<br>(A/m) | Power Density (S)<br>(mW/ cm <sup>2</sup> ) | Averaging Time<br> E  <sup>2</sup> , H  <sup>2</sup> or S<br>(minutes) |  |
|--------------------------|---|---|---|--|--|
| 0.3-3.0                  | 614                                     | 1.63                                    | (100)*                                      | 6  |  |
| 3.0-30                   | 1842 / f                                | 4.89 / f                                | (900 / f)*                                  | 6  |  |
| 30-300                   | 61.4                                    | 0.163                                   | 1.0   | 6  |  |
| 300-1500                 |   |   | F/300                                       | 6  |  |
| 1500-100,000             |   |   | 5   | 6  |  |

## Limite for Occurretional / Controlled E

Note: *f* is frequency in MHz

\* = Power density limit is applicable at frequencies greater than 100 MHz

| Emilis for Ocherar ropulation? Oncontrolled Exposure |   |   |   |  |  |  |  |  |
|--|---|---|---|--|--|--|--|--|

### Limits for General Population / Uncontrolled Exposure

Note: f = frequency in MHz

\* = Plane-wave equivalent power density

#### MPE PREDICTION

Predication of MPE limit at a given distance, Equation from OET Bulletin 65, Edition 97-01  $S=PG/4\pi R^2$ 

Where: S = power density

P = power input to antenna

G = power gain of the antenna in the direction of interest relative to an isotropic radiator

R = distance to the center of radiation of the antenna, R=0.2m
