## APPENDIX C - RF EXPOSURE EVALUATION

## Maximum Permissible Exposure (MPE)

## Applicable Standard

According to subpart $\S 1.1310,15.247$ (i) systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Limits for Maximum Permissible Exposure (MPE) (§1.1310, §2.1091)

| (B) Limits for General Population/Uncontrolled Exposure |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency Range <br> (MHz) | Electric Field <br> Strength (V/m) | Magnetic Field <br> Strength (A/m) | Power Density <br> $\left(\mathbf{m W} / \mathbf{c m}^{2}\right)$ | Averaging Time <br> (minutes) |  |
| $0.3-1.34$ | 614 | 1.63 | $*(100)$ | 30 |  |
| $1.34-30$ | $824 / \mathrm{f}$ | $2.19 / \mathrm{f}$ | $*\left(180 / \mathrm{f}^{2}\right)$ | 30 |  |
| $30-300$ | 27.5 | 0.073 | 0.2 | 30 |  |
| $300-1500$ | $/$ | $/$ | $\mathrm{f} / 1500$ | 30 |  |
| $1500-100,000$ | $/$ | $/$ | 1.0 | 30 |  |

$\mathrm{f}=$ frequency in $\mathrm{MHz} ; *=$ Plane-wave equivalent power density;
According to $\S 1.1310$ and $\S 2.1091 \mathrm{RF}$ exposure is calculated.

## Calculation formula:

Prediction of power density at the distance of the applicable MPE limit
$\mathrm{S}=\mathrm{PG} / 4 \pi \mathrm{R}^{2}=$ power density (in appropriate units, e.g. $\mathrm{mW} / \mathrm{cm}^{2}$ );
$\mathrm{P}=$ power input to the antenna (in appropriate units, e.g., mW );
$\mathrm{G}=$ power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain;
$\mathrm{R}=$ distance to the center of radiation of the antenna (appropriate units, e.g., cm );

## Calculated Data:

| Mode | $\begin{array}{c}\text { Frequency } \\ (\mathbf{M H z})\end{array}$ | Antenna Gain |  | $\begin{array}{c}\text { Conducted } \\ \text { output power } \\ \text { including Tune- } \\ \text { up Tolerance }\end{array}$ |  | $\begin{array}{c}\text { Evaluation } \\ \text { Distance } \\ (\mathbf{c m})\end{array}$ | $\begin{array}{c}\text { Power } \\ \text { Density } \\ \left(\mathbf{m W} / \mathbf{c m}^{2}\right)\end{array}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | \(\left.\begin{array}{c}MPE Limit <br>

\left(\mathbf{m W} / \mathbf{c m}^{2}\right)\end{array}\right]\)

Note:
The Conducted output power including Tune-up Tolerance provided by manufacturer
Result: The device meet FCC MPE at 20 cm distance
***** END OF REPORT *****
