## 1 Introduction

#### 1.1 Identification of Testing Laboratory

| Company Name: | BTF Testing Lab (Shenzhen) Co., Ltd.  |  |  |
|---------------|---|--|--|
| Address:      | F101, 201 and 301, Building 1, Block 2, Tantou Industrial Park, Tantou Community, Songgang Street, Bao'an District, Shenzhen, China |  |  |
| Phone Number: | +86-0755-23146130   |  |  |
| Fax Number:   | +86-0755-23146130   |  |  |

#### 1.2 Identification of the Responsible Testing Location

| Company Name:  | BTF Testing Lab (Shenzhen) Co., Ltd. |  |  |
|--|--------------------------------------|--|--|
| Address: F101, 201 and 301, Building 1, Block 2, Tantou Industrial Park, Tantou Community, Songgang Street, Bao'an District, Shenzhen, China |                                      |  |  |
| Phone Number:  | +86-0755-23146130                    |  |  |
| Fax Number:  | +86-0755-23146130                    |  |  |
| FCC Registration Number:   | 518915                               |  |  |
| Designation Number:  | CN1330                               |  |  |

#### 1.3 Announcement

(1) The test report reference to the report template version v0.

(2) The test report is invalid if not marked with the signatures of the persons responsible for preparing, reviewing and approving the test report.

(3) The test report is invalid if there is any evidence and/or falsification.

(4) This document may not be altered or revised in any way unless done so by BTF and all revisions are duly noted in the revisions section.

(5) Content of the test report, in part or in full, cannot be used for publicity and/or promotional purposes without prior written approval from the laboratory.

(6) The laboratory is only responsible for the data released by the laboratory, except for the part provided by the applicant.

# 2 **Product Information**

#### 2.1 Application Information

| Company Name: Migear International Group LLC                                |   |  |
|---|---|--|
| Address: 21 West 38th Street, 14th Floor. New York, NY 10018, United States |   |  |
| 2.2 Manufacturer Information  |   |  |
| Company Name: Dongguan Yanyan Digital Technology Co., LTD                   |   |  |
| Address:  | Room 201, No.43 Humen Dakeng Road, Humen Town, Dongguan City, |  |

#### 2.3 Factory Information

| Company Name: | Dongguan Yanyan Digital Technology Co., LTD                             |
|---------------|---|
| Address:      | Room 201, No.43 Humen Dakeng Road, Humen Town, Dongguan City, Guangdong |

#### 2.4 General Description of Equipment under Test (EUT)

Guangdong

| EUT Name:                                     | CRAYON SPEAKER                    |
|---|-----------------------------------|
| Test Model Number:                            | CBT450                            |
| Series Model Number:                          | BT450, FBT450                     |
| Description of Model<br>name differentiation: | Only the model name is different. |

#### 2.5 Technical Information

| Power Supply:             | DC 5V from adaptor or DC 3.7V from battery                                       |      |
|---------------------------|--|------|
| Power Adaptor:            | N/A  |      |
| Battery parameter:        | DC 3.7V 1500mAh 5.55Wh   |      |
| Operation Frequency:      | 2402MHz to 2480MHz   |      |
| Number of Channels:       | 79   |      |
| Modulation Type:          | GFSK, π/4 DQPSK, 8DPSK   |      |
| Antenna Type:             | PCB antenna  |      |
| Antenna Gain#:            | -0.58dBi   |      |
| Note:                     |  |      |
| #: The antenna gain provi | ded by the applicant, and the laboratory will not be responsible for the accumul | ated |

#: The antenna gain provided by the applicant, and the laboratory will not be responsible for the accumulated calculation results which covers the information provided by the applicant.
 Bluetooth Version: 5.3

## 3 Summary of Test Results

#### 3.1 Test Standards

The tests were performed according to following standards:

47 CFR Part 15.247: Operation within the bands 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz

#### 3.2 Uncertainty of Test

| ±2.64dB<br>±69kHz<br>±0.87dB        |
|-------------------------------------|
|                                     |
| +0.824B                             |
| ±0.0/UD                             |
| ±0.95dB                             |
| 1-6GHz: ±3.94dB<br>6-18GHz: ±4.16dB |
| ±4.12dB                             |
|                                     |

The following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

#### 3.3 Summary of Test Result

| Item  | Standard           | Requirement                         | Result |
|---|--------------------|-------------------------------------|--------|
| Antenna requirement                         | 47 CFR Part 15.247 | 47 CFR 15.203                       | Pass   |
| Conducted Emission at AC power line         | 47 CFR Part 15.247 | 47 CFR 15.207(a)                    | Pass   |
| Occupied Bandwidth                          | 47 CFR Part 15.247 | 47 CFR 15.215(c)                    | Pass   |
| Maximum Conducted Output Power              | 47 CFR Part 15.247 | 47 CFR 15.247(b)(1)                 | Pass   |
| Channel Separation                          | 47 CFR Part 15.247 | 47 CFR 15.247(a)(1)                 | Pass   |
| Number of Hopping Frequencies               | 47 CFR Part 15.247 | 47 CFR 15.247(a)(1)(iii)            | Pass   |
| Dwell Time                                  | 47 CFR Part 15.247 | 47 CFR 15.247(a)(1)(iii)            | Pass   |
| Emissions in non-restricted frequency bands | 47 CFR Part 15.247 | 47 CFR 15.247(d), 15.209, 15.205    | Pass   |
| Band edge emissions (Radiated)              | 47 CFR Part 15.247 | 47 CFR 15.247(d), 15.209, 15.205    | Pass   |
| Emissions in frequency bands (below 1GHz)   | 47 CFR Part 15.247 | 47 CFR 15.247(d), 15.209, 15.205    | Pass   |
| Emissions in frequency bands (above 1GHz)   | 47 CFR Part 15.247 | 47 CFR 15.247(d), 15.209,<br>15.205 | Pass   |

# 4.2 Test Auxiliary Equipment

The EUT was tested as an independent device.

#### 4.3 Test Modes

| No.                | Test Modes                | Description   |  |  |  |  |
|--------------------|---------------------------|---|--|--|--|--|
| TM1                | TX-GFSK<br>(Non-Hopping)  | Keep the EUT in continuously transmitting mode (non-hopping) with GFSK modulation.      |  |  |  |  |
| TM2 TX-Pi/4DQPSK K |                           | Keep the EUT in continuously transmitting mode (non-hopping) with Pi/4DQPSK modulation. |  |  |  |  |
| TM3                | TX-8DPSK<br>(Non-Hopping) | Keep the EUT in continuously transmitting mode (non-hopping) with 8DPSK modulation.     |  |  |  |  |
| TM4                | TX-GFSK (Hopping)         | Keep the EUT in continuously transmitting mode (hopping) with GFSK modulation,.         |  |  |  |  |
| TM5                | TX-Pi/4DQPSK<br>(Hopping) | Keep the EUT in continuously transmitting mode (hopping) with Pi/4DQPSK modulation.     |  |  |  |  |
| TM6                | TX-8DPSK (Hopping)        | Keep the EUT in continuously transmitting mode (hopping) with 8DPSK modulation.         |  |  |  |  |

# 5 Evaluation Results (Evaluation)

#### 5.1 Antenna requirement

| Test Requirement: | Refer to 47 CFR Part 15.203, an intentional radiator shall be designed to ensure<br>that no antenna other than that furnished by the responsible party shall be used<br>with the device. The use of a permanently attached antenna or of an antenna that<br>uses a unique coupling to the intentional radiator shall be considered sufficient to<br>comply with the provisions of this section. |
|-------------------|---|
|-------------------|---|

#### 5.1.1 Conclusion:

#### Radio Spectrum Matter Test Results (RF)

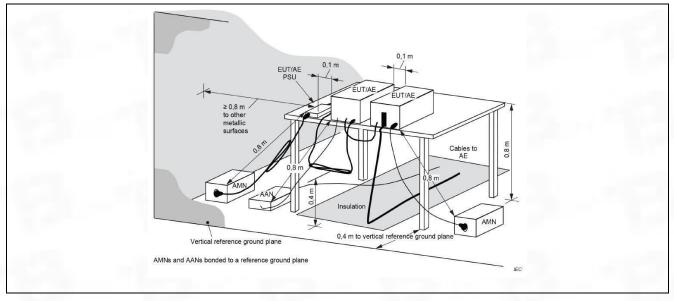

#### 5.2 Conducted Emission at AC power line

| Test Requirement: | Refer to 47 CFR 15.207(a), Except as shown in paragraphs (b)and (c)of this section, for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 µH/50 ohms line impedance stabilization network (LISN). |  |                                  |  |  |  |
|-------------------|--|--|----------------------------------|--|--|--|
| Test Method:      | ANSI C63.10-2020 section 6.2   |  |                                  |  |  |  |
| Test Limit:       | Frequency of emission (MHz)<br>0.15-0.5<br>0.5-5<br>5-30   | Conducted limit (dB<br>Quasi-peak<br>66 to 56*<br>56<br>60 | Average<br>56 to 46*<br>46<br>50 |  |  |  |
|                   | *Decreases with the logarithm of t   | he frequency.  |                                  |  |  |  |
| Procedure:        | Refer to ANSI C63.10-2020 section 6.2, standard test method for ac power-line conducted emissions from unlicensed wireless devices   |  |                                  |  |  |  |

#### 5.2.1 E.U.T. Operation:

| Operating Environment: |           |
|------------------------|-----------|
| Temperature:           | 23 °C     |
| Humidity:              | 45.4 %    |
| Atmospheric Pressure:  | 1010 mbar |

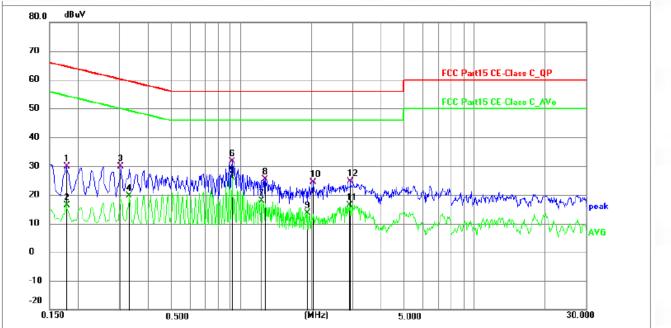

#### 5.2.2 Test Setup Diagram:

#### 5.2.3 Test Data:

All modes are tested, and only the worst mode 8DPSK 2402MHz is showed in the report Line: Line

#### 5.3 Occupied Bandwidth

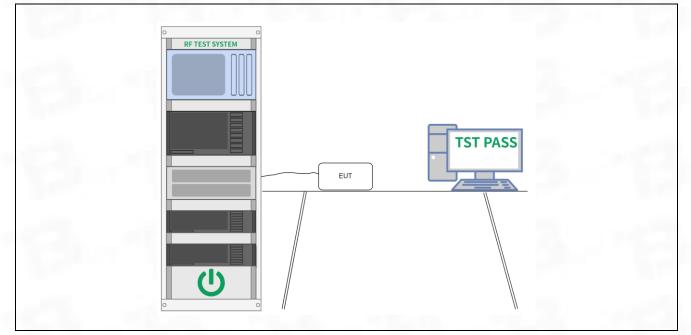

| Test Requirement: | 47 CFR 15.215(c)   |
|-------------------|--|
|                   | ANSI C63.10-2020, section 7.8.7, For occupied bandwidth measurements, use the  |
| Test Method:      | procedure in 6.9.2.  |
|                   | KDB 558074 D01 15.247 Meas Guidance v05r02   |
| Test Limit:       | Refer to 47 CFR 15.215(c), intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§ 15.217 through 15.257 and in subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated.  |
|                   | <ul> <li>a) The spectrum analyzer center frequency is set to the nominal EUT channel center frequency. The span range for the EMI receiver or spectrum analyzer shall be between two times and five times the OBW.</li> <li>b) The nominal IF filter bandwidth (3 dB RBW) shall be in the range of 1% to 5% of the OBW and video bandwidth (VBW) shall be approximately three times RBW, unless otherwise specified by the applicable requirement.</li> <li>c) Set the reference level of the instrument as required, keeping the signal from exceeding the maximum input mixer level for linear operation. In general, the peak of the spectral envelope shall be more than [10 log (OBW/RBW)] below the reference level. Specific guidance is given in 4.1.5.2.</li> <li>d) Steps a) through c) might require iteration to adjust within the specified tolerances.</li> </ul>  |
| Procedure:        | <ul> <li>e) The dynamic range of the instrument at the selected RBW shall be more than 10 dB below the target "-xx dB down" requirement; that is, if the requirement calls for measuring the -20 dB OBW, the instrument noise floor at the selected RBW shall be at least 30 dB below the reference value.</li> <li>f) Set detection mode to peak and trace mode to max hold.</li> <li>g) Determine the reference value: Set the EUT to transmit an unmodulated carrier or modulated signal, as applicable. Allow the trace to stabilize. Set the spectrum analyzer marker to the highest level of the displayed trace (this is the reference value).</li> <li>h) Determine the "-xx dB down amplitude" using [(reference value) - xx].</li> <li>Alternatively, this calculation may be made by using the marker-delta function of the instrument.</li> <li>i) If the reference value is determined by an unmodulated carrier, then turn the EUT modulation ON, and either clear the existing trace or start a new trace on the</li> </ul>   |
|                   | spectrum analyzer and allow the new trace to stabilize. Otherwise, the trace from<br>step g) shall be used for step j).<br>j) Place two markers, one at the lowest frequency and the other at the highest<br>frequency of the envelope of the spectral display, such that each marker is at or<br>slightly below the "-xx dB down amplitude" determined in step h). If a marker is<br>below this "-xx dB down amplitude" value, then it shall be as close as possible to<br>this value. The occupied bandwidth is the frequency difference between the two<br>markers. Alternatively, set a marker at the lowest frequency of the envelope of the<br>spectral display, such that the marker is at or slightly below the "-xx dB down<br>amplitude" determined in step h). Reset the marker-delta function and move the<br>marker to the other side of the emission until the delta marker amplitude is at the<br>same level as the reference marker amplitude. The marker-delta frequency reading<br>at this point is the specified emission bandwidth.<br>k) The occupied bandwidth shall be reported by providing plot(s) of the measuring<br>instrument display; the plot axes and the scale units per division shall be clearly<br>labeled. Tabular data may be reported in addition to the plot(s). |

#### 5.3.1 E.U.T. Operation:

| Operating Environment: |           |  |
|------------------------|-----------|--|
| Temperature:           | 22.9 °C   |  |
| Humidity:              | 49.6 %    |  |
| Atmospheric Pressure:  | 1010 mbar |  |
|                        |           |  |

#### 5.3.2 Test Setup Diagram:

#### 5.3.3 Test Data:

Please Refer to Appendix for Details.

#### 5.4 Maximum Conducted Output Power

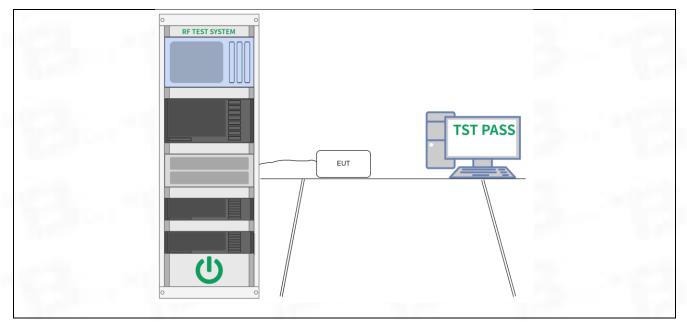

| Test Requirement: | 47 CFR 15.247(b)(1)   |
|-------------------|---|
| Test Method:      | ANSI C63.10-2020, section 7.8.5   |
|                   | KDB 558074 D01 15.247 Meas Guidance v05r02  |
| Test Limit:       | Refer to 47 CFR 15.247(b)(1), For frequency hopping systems operating in the 2400-2483.5 MHz band employing at least 75 non-overlapping hopping channels, and all frequency hopping systems in the 5725-5850 MHz band: 1 watt. For all other frequency hopping systems in the 2400-2483.5 MHz band: 0.125 watts.  |
| Procedure:        | <ul> <li>This is an RF-conducted test to evaluate maximum peak output power. Use a direct connection between the antenna port of the unlicensed wireless device and the spectrum analyzer, through suitable attenuation. The hopping shall be disabled for this test: <ul> <li>a) Use the following spectrum analyzer settings:</li> <li>1) Span: Approximately five times the 20 dB bandwidth, centered on a hopping channel.</li> <li>2) RBW &gt; 20 dB bandwidth of the emission being measured.</li> <li>3) VBW &gt;= RBW.</li> <li>4) Sweep: Auto.</li> <li>5) Detector function: Peak.</li> <li>6) Trace: Max hold.</li> <li>b) Allow trace to stabilize.</li> <li>c) Use the marker-to-peak function to set the marker to the peak of the emission.</li> <li>d) The indicated level is the peak output power, after any corrections for external attenuators and cables.</li> <li>e) A plot of the test results and setup description shall be included in the test report.</li> </ul> </li> <li>NOTE—A peak responding power meter may be used, where the power meter and sensor system video bandwidth is greater than the occupied bandwidth of the unlicensed wireless device, rather than a spectrum analyzer.</li> </ul> |

#### 5.4.1 E.U.T. Operation:

| Operating Environment:  |           |
|-------------------------|-----------|
| Temperature:            | 22.9 °C   |
| Humidity:               | 49.6 %    |

# 5.4.3 Test Data:

Please Refer to Appendix for Details.

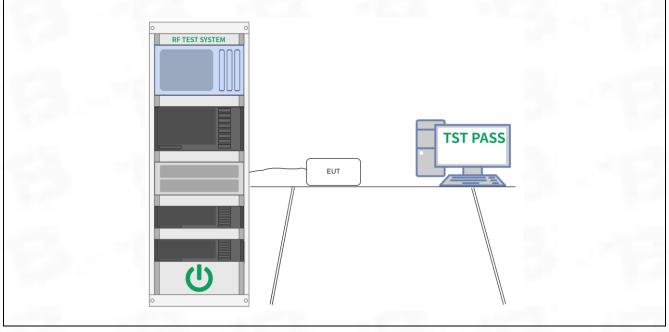

#### 5.5 Channel Separation

| Test Requirement: | 47 CFR 15.247(a)(1)   |
|-------------------|---|
| Test Method:      | ANSI C63.10-2020, section 7.8.2   |
|                   | KDB 558074 D01 15.247 Meas Guidance v05r02  |
| Test Limit:       | Refer to 47 CFR 15.247(a)(1), Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.  |
| Procedure:        | The EUT shall have its hopping function enabled. Use the following spectrum<br>analyzer settings:<br>a) Span: Wide enough to capture the peaks of two adjacent channels.<br>b) RBW: Start with the RBW set to approximately 30% of the channel spacing;<br>adjust as necessary to best identify the center of each individual channel.<br>c) Video (or average) bandwidth (VBW) ≥ RBW.<br>d) Sweep: Auto.<br>e) Detector function: Peak.<br>f) Trace: Max hold.<br>g) Allow the trace to stabilize.<br>Use the marker-delta function to determine the separation between the peaks of<br>the adjacent channels. Compliance of an EUT with the appropriate regulatory limit<br>shall be determined. A plot of the data shall be included in the test report. |

#### 5.5.1 E.U.T. Operation:

| Operating Environment: |           |
|------------------------|-----------|
| Temperature:           | 22.9 °C   |
| Humidity:              | 49.6 %    |
| Atmospheric Pressure:  | 1010 mbar |

#### 5.5.2 Test Setup Diagram:

#### 5.5.3 Test Data:

Please Refer to Appendix for Details.

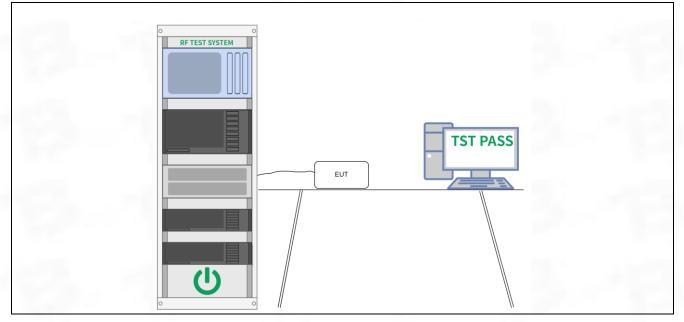

#### 5.6 Number of Hopping Frequencies

| To at Daminana anti   |   |
|-----------------------|---|
| Test Requirement:     | 47 CFR 15.247(a)(1)(iii)  |
| Test Method:          | ANSI C63.10-2020, section 7.8.3   |
|                       | KDB 558074 D01 15.247 Meas Guidance v05r02  |
| Test Limit:           | Refer to 47 CFR 15.247(a)(1)(iii), Fequency hopping systems in the 2400-2483.5<br>MHz band shall use at least 15 channels. The average time of occupancy on any<br>channel shall not be greater than 0.4 seconds within a period of 0.4 seconds<br>multiplied by the number of hopping channels employed. Frequency hopping<br>systems may avoid or suppress transmissions on a particular hopping frequency<br>provided that a minimum of 15 channels are used.  |
| Procedure:            | <ul> <li>The EUT shall have its hopping function enabled. Use the following spectrum analyzer settings:</li> <li>a) Span: The frequency band of operation. Depending on the number of channels the device supports, it may be necessary to divide the frequency range of operation across multiple spans, to allow the individual channels to be clearly seen.</li> <li>b) RBW: To identify clearly the individual channels, set the RBW to less than 30% of the channel spacing or the 20 dB bandwidth, whichever is smaller.</li> <li>c) VBW ≥ RBW.</li> <li>d) Sweep: Auto.</li> <li>e) Detector function: Peak.</li> <li>f) Trace: Max hold.</li> <li>g) Allow the trace to stabilize.</li> <li>It might prove necessary to break the span up into subranges to show clearly all of the hopping frequencies. Compliance of an EUT with the appropriate regulatory limit shall be determined for the number of hopping channels. A plot of the data shall be included in the test report.</li> </ul> |
| 5.6.1 EILT Operation: |   |

#### 5.6.1 E.U.T. Operation:

| Operating Environment: |           |
|------------------------|-----------|
| Temperature:           | 22.9 °C   |
| Humidity:              | 49.6 %    |
| Atmospheric Pressure:  | 1010 mbar |

#### 5.6.2 Test Setup Diagram:

**5.6.3 Test Data:** Please Refer to Appendix for Details.

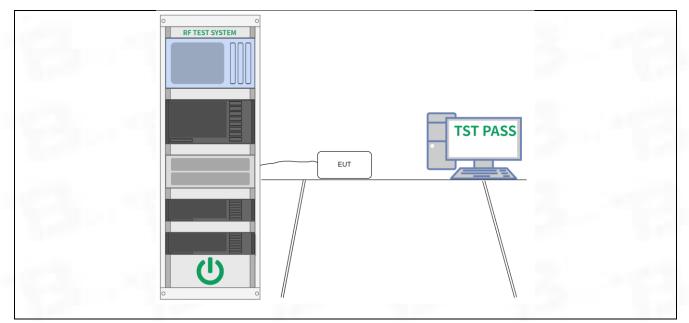

#### 5.7 Dwell Time

| Test Requirement:      | 47 CFR 15.247(a)(1)(iii)   |
|------------------------|--|
| Test Method:           | ANSI C63.10-2020, section 7.8.4  |
|                        | KDB 558074 D01 15.247 Meas Guidance v05r02   |
| Test Limit:            | Refer to 47 CFR 15.247(a)(1)(iii), Fequency hopping systems in the 2400-2483.5 MHz band shall use at least 15 channels. The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed. Frequency hopping systems may avoid or suppress transmissions on a particular hopping frequency provided that a minimum of 15 channels are used.  |
| Procedure:             | The EUT shall have its hopping function enabled. Use the following spectrum<br>analyzer settings:<br>a) Span: Zero span, centered on a hopping channel.<br>b) RBW shall be <= channel spacing and where possible RBW should be set >> 1 /<br>T, where T is the expected dwell time per channel.<br>c) Sweep: As necessary to capture the entire dwell time per hopping channel;<br>where possible use a video trigger and trigger delay so that the transmitted signal<br>starts a little to the right of the start of the plot. The trigger level might need slight<br>adjustment to prevent triggering when the system hops on an adjacent channel; a<br>second plot might be needed with a longer sweep time to show two successive<br>hops on a channel.<br>d) Detector function: Peak.<br>e) Trace: Max hold.<br>Use the marker-delta function to determine the transmit time per hop. If this value<br>varies with different modes of operation (data rate, modulation format, number of<br>hopping channels, etc.), then repeat this test<br>for each variation in transmit time.<br>Repeat the measurement using a longer sweep time to determine the number of<br>hops over the period specified in the requirements. The sweep time and calculate<br>the total number of hops in the period specified in the requirements, using the<br>following equation:<br>(Number of hops in the period specified in the requirements) =<br>(number of hops on spectrum analyzer) × (period specified in the requirements /<br>analyzer sweep time)<br>The average time of occupancy is calculated from the transmit time per hop<br>multiplied by the number of hops in the period specified in the requirements. If the |
| 5.7.1 Ell T Operation: | number of hops in a specific time varies with different modes of operation (data rate, modulation format, number of hopping channels, etc.), then repeat this test for each variation.<br>The measured transmit time and time between hops shall be consistent with the values described in the operational description for the EUT.   |

#### 5.7.1 E.U.T. Operation:

| Operating Environment:  |           |
|-------------------------|-----------|
| Temperature:            | 22.9 °C   |
| Humidity:               | 49.6 %    |
| Atmospheric Pressure:   | 1010 mbar |
| 5.7.2 Test Setup Diagra | m:        |

# 5.7.3 Test Data:

Please Refer to Appendix for Details.

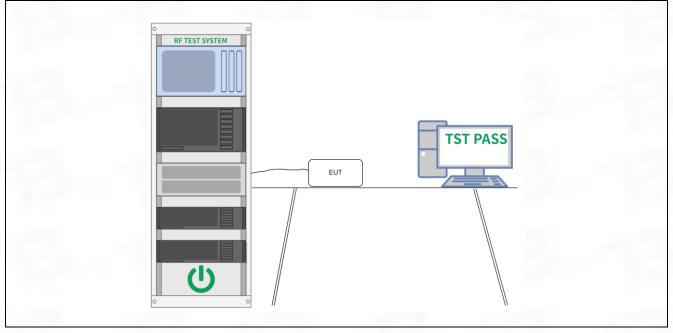

#### 5.8 Emissions in non-restricted frequency bands

| Test Requirement: | 47 CFR 15.247(d), 15.209, 15.205  |
|-------------------|---|
| Test Method:      | ANSI C63.10-2020 section 7.8.8  |
| rest Method.      | KDB 558074 D01 15.247 Meas Guidance v05r02  |
| Test Limit:       | Refer to 47 CFR 15.247(d), In any 100 kHz bandwidth outside the frequency band<br>in which the spread spectrum or digitally modulated intentional radiator is<br>operating, the radio frequency power that is produced by the intentional radiator<br>shall be at least 20 dB below that in the 100 kHz bandwidth within the band that<br>contains the highest level of the desired power, based on either an RF conducted<br>or a radiated measurement, provided the transmitter demonstrates compliance<br>with the peak conducted power limits. If the transmitter complies with the<br>conducted power limits based on the use of RMS averaging over a time interval, as<br>permitted under paragraph (b)(3) of this section, the attenuation required under this<br>paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits<br>specified in § 15.209(a) is not required. |
| Procedure:        | Conducted spurious emissions shall be measured for the transmit frequency, per 5.5 and 5.6, and at the maximum transmit powers.<br>Connect the primary antenna port through an attenuator to the spectrum analyzer input; in the results, account for all losses between the unlicensed wireless device output and the spectrum analyzer. The instrument shall span 30 MHz to 10 times the operating frequency in GHz, with a resolution bandwidth of 100 kHz, video bandwidth of 300 kHz, and a coupled sweep time with a peak detector. The band 30 MHz to the highest frequency may be split into smaller spans, as long as the entire spectrum is covered.  |

#### 5.8.1 E.U.T. Operation:

| Operating Environment: |           |
|------------------------|-----------|
| Temperature:           | 22.9 °C   |
| Humidity:              | 49.6 %    |
| Atmospheric Pressure:  | 1010 mbar |

#### 5.8.2 Test Setup Diagram:

# 5.8.3 Test Data:

Please Refer to Appendix for Details.
