1. Test Certification

CT通测检测 TESTING CENTRE TECHNOLOGY

Product:	Internal sensor
Model No.:	C05WB
Additional Model:	T02W, C06W, C07W, C08W
Applicant:	Dongguan Saftire Auto Safety Technology Co., Ltd
Address:	1, 3rd Floor, Small technology companies Pioneer Park, Songshan Lake, DongGuan, China
Manufacturer:	Dongguan Saftire Auto Safety Technology Co., Ltd
Address:	1, 3rd Floor, Small technology companies Pioneer Park, Songshan Lake, DongGuan, China
Date of Test:	Feb. 23 - Mar. 07, 2017
Applicable Standards:	FCC CFR Title 47 Part 15 Subpart C Section 15.231

The above equipment has been tested by Shenzhen Tongce Testing Lab. and found compliance with the requirements set forth in the technical standards mentioned above. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

3. EUT Description

Product Name:	Internal sensor	
Model :	C05WB	
Additional Model:	T02W, C06W, C07W, C08W	
Trade Mark:	N/A	
Operation Frequency:	433.92MHz	
Modulation Technology:	FSK	
Antenna Type:	External Antenna	
Antenna Gain:	0dBi	
Power Supply:	DC 3V(The button battery*1)	
Remark:	All models above are identical in interior structure, electrical circuits and components, and just model names are different for the marketing requirement.	.5

Hotline: 400-6611-140 Tel: 86-755-27673339 Fax: 86-755-27673332 http://www.tct-lab.com

4. Genera Information

4.1. Test Environment and Mode

Operating Environment:

Temperature:	24.0 °C
Humidity:	54 % RH
Atmospheric Pressure:	1010 mbar
Teet Meder	

Test Mode:

Operation mode:	Keep the EUT in continuous transmitting with modulation

The sample was placed (0.8m below 1GHz, 1.5m above 1GHz) above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

4.2. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

Equipment	Model No.	Serial No.	FCC ID	Trade Name
	1	/		

Note:

1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.

2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended

use.

5. Facilities and Accreditations

5.1. Facilities

The test facility is recognized, certified, or accredited by the following organizations:

• FCC - Registration No.: 572331

Shenzhen Tongce Testing Lab

The 3m Semi-anechoic chamber has been registered and fully described in a report with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files.

• IC - Registration No.: 10668A-1

The 3m Semi-anechoic chamber of Shenzhen TCT Testing Technology Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing

CNAS - Registration No.: CNAS L6165
 Shenzhen TCT Testing Technology Co., Ltd. is accredited to ISO/IEC 17025:2005
 General Requirements for the Competence of Testing and Calibration laboratories for the competence of testing. The Registration No. is CNAS L6165.

5.2. Location

Shenzhen Tongce Testing Lab

Address: 1F, Leinuo Watch Building, Fuyong Town, Baoan Dist, Shenzhen, China Tel: 86-755-36638142

5.3. Measurement Uncertainty

The reported uncertainty of measurement $y \pm U$, where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95 %.

Note:

TCT通测检测 TECT通测检测

- 1. RF Voltage (dBuV) = 20 log RF Voltage (uV) 2. In the Above Table, the tighter limit applies at the band edges.
- Distance refers to the distance in meters between the measuring instrument antenna and the EUT
 The radiated emissions should be tested under 3-axes position (Lying, Side, and Stand), After pre-test. It was found that the worse radiated emission was get at the lying position.
- 5. If measurement is made at 3m distance, then F.S Limitation at 3m distance is adjusted by using the formula Ld1 = Ld2 * (d2/d1)

6.4. Occupied Bandwidth

TCT 通测检测 TESTING CENTRE TECHNOLOGY

6.4.1. Test Specification

Test Requirement:	FCC Part15 C Section 15.215(c)			
Test Method:	ANSI C63.10: 2013			
Limit:	According to 15.231(c), The bandwidth of the emission shall be no wider than 0.25% of the centre frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the centre frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.			
	 According to the follow Test-setup, keep the relative position between the artificial antenna and the EUT. Set to the maximum power setting and enable the EUT transmit continuously. Use the following spectrum analyzer settings for 20dB Bandwidth measurement. Span = approximately 2 to 3 times the 20 dB bandwidth, centered on a hopping channel; RBW≥ 1% of the 20 dB bandwidth; VBW≥RBW; Sweep = auto; Detector function = peak; Trace = max hold. Measure and record the results in the test report. 			
Test setup:				
Test Mode:	Transmitting Mode			
Test results:	PASS			

6.4.2. Test Instruments

RF Test Room					
Equipment Manufacturer Model Serial Number Calibration Due					
Spectrum Analyzer	R&S	FSU	200054	Aug. 11, 2017	

Note: The calibration interval of the above test instruments is 12 months and the calibrations are traceable to international system unit (SI).

6.5. Transmission time and silent time

6.5.1. Test Specification

TCT 通测检测 TESTING CENTRE TECHNOLOGY

Test Requirement:	FCC Part15 C Section 15.231(e)
Test Method:	ANSI C63.10: 2013
Limit:	According to 15.231(e), devices operated under the provisions of this paragraph shall be provided with a means for automatically limiting operation so that the duration of each transmission shall not be greater than one second and the silent period between transmissions shall be at least 30 times the duration of the transmission but in no case less than 10 seconds.
	 According to the follow Test-setup, keep the relative position between the artificial antenna and the EUT. Set to the maximum power setting and enable the EUT transmit continuously. Use the following spectrum analyzer settings. For transmission time: Span = 0MHz, centered on a declared channel; RBW=100kHz; VBW≥3RBW; Sweep = 1s; Detector function = peak, record the transmission time. For silent time: Span = 0MHz, centered on a declared channel; RBW=100kHz; VBW≥3RBW; Sweep = 1s; Detector function = peak, record the transmission time. For silent time: Span = 0MHz, centered on a declared channel; RBW=100kHz; VBW ≥ 3RBW; Sweep = as necessary to capture at least two periodic time; Detector function = peak, record the results in the test report.
Test setup:	Spectrum Analyzer
Test Mode:	Transmitting Mode
Test results:	PASS

6.5.2. Test Instruments

RF Test Room					
Equipment Manufacturer Model Serial Number Calibration Du					
Spectrum Analyzer	R&S	FSU	200054	Aug. 11, 2017	

Note: The calibration interval of the above test instruments is 12 months and the calibrations are traceable to international system unit (SI).
