1. Technical Information

Note: Provided by applicant

1.1. Applicant Information

Company:Guilin Zhishen Information Technology Co.,Ltd.Address:6F,Bldg 13,Creative Industrial Park, Guimo Road

1.2. Equipment under Test (EUT) Description

EUT Type:	Digital Camera Stabilizer
Serial No:	(N/A, marked #1 by test site)
Hardware Version:	V1.0
Software Version:	V1.0
Rated Voltage:	7.4V
Rated Current:	80mA

Power Supply :	Battery	AE TLAS OFT MOT AS THE
	Brand Name:	2 martin months months a
	Model No.:	18350 锂电池
	Serial No.:	(N/A, marked #1 by test site)
	Capacity:	900mAh
	Rated Voltage:	3.7V
LAB ORLAN	Charge Limit:	4.20V±0.05 V

NOTE:

- The EUT supports ISM 2.4GHz Bluetooth band. It is equipped with a Micro-B USB port which can be connected to the ancillary.
- 2. For a more detailed description, please refer to specification or user's manual supplied by the applicant and/or manufacturer.

MORLAB GROUP

FL1-3, Building A, FeiYang Science Park, No.8 LongChang Road, Block67, BaoAn District, ShenZhen , GuangDong Province, P. R. China

2. Test Results

2.1. Applied Reference Documents

The objective of the report is to perform testing according to 47 CFR Part 15 Subpart B:

No.	Identity	Document Title
d.	47 CFR Part 15(July 12, 2016	Radio Frequency Devices
	Edition)	et Ab stort MO.

Test detailed items/section required by FCC rules and results are as below:

No.	Section	Description	Test Date	Result
dar	15.107	Conducted Emission	2016.07.14	PASS
2	15.109	Radiated Emission	2016.07.14	PASS

NOTE: The tests were performed according to the method of measurements prescribed in ANSI C63.4-2014.

3. Test Conditions Setting

3.1. Test Mode

1	The first test mode
MORI	The EUT configuration of the emission tests is EUT + Battery + PC.
	During the measurement, the EUT was connected with a PC through the Micro-B USB
	port, the EUT was kept upgrading software and charging by the PC.
2	The second test mode
MORL	The EUT configuration of the emission tests is USB Line + Battery + Charger + PC. During the measurement, battery was put into charger which was connected with a PC through the USB Line, the battery was kept charging by the PC.
Note:	All test modes were performed, only the worse mode(The first test mode) was record in
the rep	port. Of a set of a s

3.2. Test Setup and Equipments List

3.2.1. Conducted Emission

A. Test Setup:

The EUT is placed on a 0.8m high insulating table, which stands on the grounded conducting floor, and keeps 0.4m away from the grounded conducting wall. The EUT is connected to the power mains through a LISN which provides $50\Omega/50\mu$ H of coupling impedance for the measuring instrument. A Pulse Limiter is used to protect the measuring instrument. The factors of the whole test system are calibrated to correct the reading.

The power strip or extension cord has been investigated to make sure that the LISN integrity in maintained with respect to the impedance characteristics as prescribed in ANSI C63.4-2014 a Clause 4.3.

Description	Manufacturer	Model	Serial No.	Cal. Date	Due. Date
Receiver	Narda	PMM 9010	595WX11007	2016.01.13	2017.01.12
Receiver	Narda	PMM 9060	001WX11001	2015.11.26	2016.11.25
LISN	Schwarzbeck	NSLK 8127	812744	2016.01.13	2017.01.12
Pulse Limiter (20dB)	Schwarzbeck	VTSD 9561-D	9391	2016.01.13	2017.01.12
PC	Apple	A1370	C02FQ2PYD DQW	N/A	N/A

B. Equipments List:

MORLAB GROUP

FL1-3, Building A, FeiYang Science Park, No.8 LongChang Road, Block67, BaoAn District, ShenZhen, GuangDong Province, P. R. China Tel: 86-755-36698555 Http://www.morlab.cn Fax: 86-755-36698525 E-mail: service@morlab.cr

3.2.2. Radiated Emission

A. Test Setup:

1. For radiated emissions from 30MHz to1GHz

2. For radiated emissions above 1GHz

MORLAB GROUP

FL1-3, Building A, FeiYang Science Park, No.8 LongChang Road, Block67, BaoAn District, ShenZhen , GuangDong Province, P. R. China

The test is performed in a 3m Semi-Anechoic Chamber; the antenna factor, cable loss and so on of the site (factors) is calculated to correct the reading. The EUT is placed on a 0.8m high insulating Turn Table, and keeps 3m away from the Test Antenna, which is mounted on a variable-height antenna master tower.

For the test Antenna:

In the frequency range above 30MHz, Bi-Log Test Antenna (30MHz to 1GHz) and Horn Test Antenna (above 1GHz) are used. Test Antenna is 3m away from the EUT. Test Antenna height is varied from 1m to 4m above the ground to determine the maximum value of the field strength. The emission levels at both horizontal and vertical polarizations should be tested.

Description	Manufacturer	Model	Serial No.	Cal. Date	Due. Date
MXE EMI Receiver	Agilent	N9038A	MY54130016	2016.01.13	2017.01.12

4. 47 CFR Part 15B Requirements

4.1. Conducted Emission

4.1.1. Requirement

According to FCC section 15.107, the radio frequency voltage that is conducted back onto the AC power line on any frequency within the band 150kHz to 30MHz shall not exceed the limits in the following table, as measured using a 50μ H/50 Ω line impedance stabilization network (LISN).

Frequency range	Conducted Limit (dBµV)					
(MHz)	Quasi-peak	Average				
0.15 - 0.50	66 to 56	56 to 46				
0.50 - 5	56	46				
5 - 30	60	50				

NOTE:

- a) The limit subjects to the Class B digital device.
- b) The lower limit shall apply at the band edges.
- c) The limit decreases linearly with the logarithm of the frequency in the range 0.15 0.50MHz.

4.1.2. Test Description

See section 3.2.1 of this report.

4.1.3. Test Result

The maximum conducted interference is searched using Peak (PK), Quasi-peak (QP) and Average (AV) detectors; the emission levels more than the AV and QP limits, and that have narrow margins from the AV and QP limits will be re-measured with AV and QP detectors. Tests for both L phase and N phase lines of the power mains connected to the EUT are performed. All test modes are considered, refer to recorded points and plots below.

Result: Pass

MORLAB GROUP

FL1-3, Building A, FeiYang Science Park, No.8 LongChang Road, Block67, BaoAn District, ShenZhen , GuangDong Province, P. R. China

4.2. Radiated Emission

4.2.1. Requirement

According to FCC section 15.109 (a), the field strength of radiated emissions from unintentional radiators at a distance of 3 meters shall not exceed the following values:

Frequency	Field Strength Limitation at 3m Measurement Dist						
range (MHz)	(μV/m)	(dBµV/m)					
30.0 - 88.0	100	20log 100					
88.0 - 216.0	150	20log 150					
216.0 - 960.0	200	20log 200					
Above 960.0	500	20log 500					

As shown in FCC section 15.35 (b), for frequencies above 1000MHz, the field strength limits are based on average detector. When average radiated emission measurements are specified in this part, including emission measurements below 1000MHz, there also is a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20dB above the maximum permitted average limit for the frequency being investigated unless a different peak emission limit is otherwise specified in the rules.

Note:

- 1) The tighter limit shall apply at the boundary between two frequency range.
- 2) Limitation expressed in dB μ V/m is calculated by 20log Emission Level (μ V/m).
- If measurement is made at 3m distance, then F.S Limitation at 3m distance is adjusted by using the formula of Ld1 = Ld2 * (d2/d1)^{2.} Example:

F.S Limit at 30m distance is 30μ V/m, then F.S Limitation at 3m distance is adjusted as Ld1 = L1 = 30μ V/m * $(10)^2$ = $100 \times 30\mu$ V/m

4.2.2. Test Description

See section 3.2.2 of this report.

MORLAB GROUP

FL1-3, Building A, FeiYang Science Park, No.8 LongChang Road, Block67, BaoAn District, ShenZhen , GuangDong Province, P. R. China Tel: 86-755-36698555 Http://www.morlab.cn

Fax: 86-755-36698525 E-mail: service@morlab.cr

4.2.3. Frequency range of measurement

According to 15.33(b) (1), the frequency range of radiated measurement for the EUT is listed in the following table:

Highest frequency generated or used in the device or on which the device operates or tunes (MHz)	Upper frequency of measure- ment range (MHz)
Below 1.705 1.705–108 108–500 500–1000 Above 1000	30. 1000. 2000. 5000. 5th harmonic of the highest frequency or 40 GHz, whichever is lower.

4.2.4. Test Result

The maximum radiated emission is searched using PK, QP and AV detectors; the emission levels more than the limits, and that have narrow margins from the limits will be re-measured with AV and QP detectors. Both the vertical and the horizontal polarizations of the Test Antenna are considered to perform the tests. All test modes are considered, refer to recorded points and plots below.

The amplitude of spurious emissions which are attenuated more than 20 dB below the permissible value need not be reported.

Note: All radiated emission tests were performed in X, Y, Z axis direction, and only the worst axis test condition was recorded in this test report.
