### **Laboratories Introduction**

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

### **Accreditations for Conformity Assessment**

### 4. Equipment under Test (EUT) Information

Description of EUT:	BLUETOOTH EARPHONE

Main Model: MBH522

Serial Model: N/A

Date EUT received: September 22, 2017

Test Date(s): September 23 to October 12, 2017

Equipment Category: DSS

Antenna Gain: 0dBi

Antenna Type: PCB Antenna

Type of Modulation: GFSK, π /4DQPSK, 8DPSK

RF Operating Frequency (ies): 2402-2480 MHz

Max. Output Power: -4.795dBm

Number of Channels: 79CH

Port: USB Port

Battery:

Input Power: Spec: 3.7V, 0.222wh

USB: DC 5.0V

Trade Name : MAGNAVOX

FCC ID: 2AIXC-HW-MBH522

Test Report	17070940-FCC-R

## 5. Test Summary

The product was tested in accordance with the following specifications.

All testing has been performed according to below product classification:

FCC Rules	Description of Test	Result
§15.203	Antenna Requirement	Compliance
§15.247(a)(1)	Channel Separation	Compliance
§15.247(a)(1)	20 dB Bandwidth	Compliance
§15.247(b)(1)	Peak Output Power	Compliance
§15.247(a)(1)(iii)	Number of Hopping Channel	Compliance
§15.247(a)(1)(iii)	Time of Occupancy (Dwell Time)	Compliance
§15.247(d)	Band Edge& Restricted Band	Compliance
§15.207(a)	AC Line Conducted Emissions	Compliance
§15.205, §15.209, §15.247(d)	Radiated Emissions& Restricted Band	Compliance

### **Measurement Uncertainty**

Emissions			
Test Item	Description	Uncertainty	
Band Edge& Restricted  Band and Radiated  Emissions& Restricted  Band	Confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2 (for EUTs < 0.5m X 0.5m X 0.5m)	+5.6dB/-4.5dB	
-	-	-	

Test Report	17070940-FCC-R
Page	8 of 62

### 6. Measurements, Examination And Derived Results

### 6.1 Antenna Requirement

#### **Applicable Standard**

According to § 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the user of a standard antenna jack or electrical connector is prohibited. The structure and application of the EUT were analyzed to determine compliance with section §15.203 of the rules. §15.203 state that the subject device must meet the following criteria:

- a. Antenna must be permanently attached to the unit.
- b. Antenna must use a unique type of connector to attach to the EUT.

Unit must be professionally installed, and installer shall be responsible for verifying that the correct antenna is employed with the unit.

And according to FCC 47 CFR section 15.247 (b), if the transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### **Antenna Connector Construction**

The EUT has 1 antenna:

A permanently attached PCB antenna for Bluetooth, the gain is 0dBi for Bluetooth.

The antenna meets up with the ANTENNA REQUIREMENT.

Result: Compliance.

### 6.2 Channel Separation

Temperature	25°C
Relative Humidity	55%
Atmospheric Pressure	1012mbar
Test date :	October 10, 2017
Tested By :	Loren Luo

### Requirement(s):

Requirement(s):			_			
Spec	Item	Item Requirement				
		Channel Separation < 20dB BW and 20dB BW <				
\$ 45 247(0)(4)	۵)	25KHz ; Channel Separation Limit=25KHz	V			
§ 15.247(a)(1)	a)	Chanel Separation < 20dB BW and 20dB BW >				
		25kHz; Channel Separation Limit=2/3 20dB BW				
Test Setup	Spectrum Analyzer EUT					
	The to	est follows FCC Public Notice DA 00-705 Measurement	Guidelines.			
	Use the following spectrum analyzer settings:					
	-	- The EUT must have its hopping function enabled				
	-	Span = wide enough to capture the peaks of two adjac	ent			
		channels				
	- Resolution (or IF) Bandwidth (RBW) ≥ 1% of the span					
Test Procedure	- Video (or Average) Bandwidth (VBW) ≥ RBW					
1001110000010	- Sweep = auto					
	- Detector function = peak					
	- Trace = max hold					
	- Allow the trace to stabilize. Use the marker-delta function to					
		determine the separation between the peaks of the adjacent				
		channels. The limit is specified in one of the subparagr	aphs of this			
		Section. Submit this plot.

### 6.3 20dB Bandwidth

Temperature	25°C
Relative Humidity	55%
Atmospheric Pressure	1012mbar
Test date :	October 10, 2017
Tested By:	Loren Luo

Requirement(s):					
Spec	Item	Requirement Applicable			
		Frequency hopping systems shall have hopping			
§15.247(a)	۵)	channel carrier frequencies separated by a minimum	V		
(1)	(a)	of 25 kHz or the 20 dB bandwidth of the hopping			
		channel, whichever is greater.			
Test Setup					
		Spectrum Analyzer EUT			
The test follows FCC Public Notice DA 00-705 Measurement Guidel			uidelines.		
	Use th	e following spectrum analyzer settings:			
	-	Span = approximately 2 to 3 times the 20 dB bandwidth,	centered on		
		a hopping channel			
	-	RBW ≥ 1% of the 20 dB bandwidth			
	-	VBW ≥ RBW			
Test	-	Sweep = auto			
Procedure	-	Detector function = peak			
T Toocdare	-	Trace = max hold.			
	-	The EUT should be transmitting at its maximum data rate	e. Allow the		
		trace to stabilize. Use the marker-to-peak function to set to	the marker		
	to the peak of the emission. Use the marker-delta function to				
		measure 20 dB down one side of the emission. Reset the	e marker-		
		delta function, and move the marker to the other side of the	he		
		emission, until it is (as close as possible to) even with the	reference		

Test Report	17070940-FCC-R
Page	14 of 62

		marker level. The marker-delta reading at this point is the 20 dB		
		bandwi	dth of the emission. If this value varies with different modes of	
		operation	on (e.g., data rate, modulation format, etc.), repeat this test for	
		each va	ariation. The limit is specified in one of the subparagraphs of	
		this Sec	ction. Submit this plot(s).

### 6.7 Band Edge & Restricted Band

Temperature	24°C
Relative Humidity	54%
Atmospheric Pressure	1020mbar
Test date :	September 29, 2017
Tested By :	Evans He

### Requirement(s):

Spec	Item	Requirement	Applicable
§15.247(a) (1)(iii)	a)	In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits.	>
Test Setup	Ant. Tower  Support Units  Turn Table  Ground Plane  Test Receiver		
Test Procedure	The test follows FCC Public Notice DA 00-705 Measurement Guidelines.  Radiated Method Only  - 1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.  - 2. Position the EUT without connection to measurement instrument. Put it on the Rotated table and turn on the EUT and make it operate in transmitting mode. Then set it to Low Channel and High Channel within its operating range,		

Test Report	17070940-FCC-R
Page	28 of 62

_	
	and make sure the instrument is operated in its linear range.
	- 3. First, set both RBW and VBW of spectrum analyzer to 100 kHz with a
	convenient frequency span including 100kHz bandwidth from band edge, check
	the emission of EUT, if pass then set Spectrum Analyzer as below:
	a. The resolution bandwidth and video bandwidth of test receiver/spectrum
	analyzer is 120 kHz for Quasiy Peak detection at frequency below 1GHz.
	b. The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and
	video bandwidth is 3MHz with Peak detection for Peak measurement at
	frequency above 1GHz.
	c. The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and the
	video bandwidth is 10Hz with Peak detection for Average Measurement as
	below at frequency above 1GHz.
	- 4. Measure the highest amplitude appearing on spectral display and set it as a
	reference level. Plot the graph with marking the highest point and edge
	frequency.
	- 5. Repeat above procedures until all measured frequencies were complete.

### Requirement(s):

Spec	Item	Requirement			Applicable
47CFR§15. 207, RSS210		For Low-power radio-frequency devices that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 [mu]H/50 ohms line impedance stabilization network (LISN). The lower limit applies at the boundary between the frequencies ranges.			<u>\</u>
(A8.1)		Frequency ranges	Limit (	. ,	
		(MHz) 0.15 ~ 0.5	QP	Average	
		0.15 ~ 0.5	66 – 56 56	56 – 46 46	
		5 ~ 30	60	50	
Test Setup	Vertical Ground Reference Plane  Horizontal Ground Reference Plane  Note: 1. Support units were connected to second LISN. 2. Both of LISNs (AMN) are 80cm from EUT and at least 80cm from other units and other metal planes support units.				
Procedure	<ol> <li>The EUT and supporting equipment were set up in accordance with the requirements of the standard on top of a 1.5m x 1m x 0.8m high, non-metallic table.</li> <li>The power supply for the EUT was fed through a 50W/50mH EUT LISN, connected to filtered mains.</li> <li>The RF OUT of the EUT LISN was connected to the EMI test receiver via a low-loss</li> </ol>				

Test Report	17070940-FCC-R
Page	36 of 62

	coaxial cable.
	4. All other supporting equipment were powered separately from another main supply.
	5. The EUT was switched on and allowed to warm up to its normal operating condition.
	6. A scan was made on the NEUTRAL line (for AC mains) or Earth line (for DC power)
	over the required frequency range using an EMI test receiver.
	7. High peaks, relative to the limit line, The EMI test receiver was then tuned to the
	selected frequencies and the necessary measurements made with a receiver bandwidth
	setting of 10 kHz.
	8. Step 7 was then repeated for the LIVE line (for AC mains) or DC line (for DC power).
Remark	
Result	Pass Fail
Test Data	Yes N/A
Test Plot	Yes (See below)

### **Test Result:**

Test Mode: Transmitting Mode

Frequency range: 9KHz - 30MHz

Freq.	Detection	Factor	Reading	Result	Limit@3m	Margin
(MHz)	value	(dB/m)	(dBuV/m)	(dBuV/m)	(dBuV/m)	(dB)
						>20
						>20

#### Note:

The amplitude of spurious emissions which are attenuated by more than 20dB below the permissible value has no need to be reported.

Distance extrapolation factor =40 log (specific distance/test distance)(dB);

Limit line = specific limits(dBuv) + distance extrapolation factor.

#### Note:

- 1, The testing has been conformed to 10\*2480MHz=24,800MHz
- 2, All other emissions more than 30 dB below the limit
- 3, X-Axis, Y-Axis and Z-Axis were investigated. The results above show only the worst case.
- 4, The radiated spurious test above 18GHz is subcontracted to SIEMIC (Nanjing-China) Laboratories. and found 30dB below the limit at least.

### Annex C. il. SUPPORTING EQUIPMENT DESCRIPTION

The following is a description of supporting equipment and details of cables used with the EUT.

### Supporting Equipment:

Manufacturer	Equipment Description	Model	Serial No
DCA	Adaptor	E2164A	N/A
Lenovo	Laptop	E40	N/A

#### Supporting Cable:

Cable type	Shield Type	Ferrite Core	Length	Serial No
USB Cable	Un-shielding	No	0.8m	N/A
