1. Summary of test results

The test results apply exclusively to the test samples as presented in this Report. The CETECOM GmbH does not assume responsibility for any conclusions and generalizations taken in conjunction with other specimens or samples of the type of the item presented to tests.

Following tests have been performed to show compliance with applicable FCC Part 2.1091 and FCC Part 1.1310 of the FCC CFR 47 Rules.

The presented <u>Equipment Under Test</u> (in this report, hereinafter referred as EUT) integrates a Proprietary 2.4 GHz RF Transceiver (Hopping Mode). Other implemented wireless technologies were not considered within this test report.

Cable 7	uUFL to SMA Cable	RCM24G to Spectrum Analyzer	10 cm

2 Administrative Data

2.1 Identification of the testing laboratory

Company name: CETECOM GmbH

Address: Im Teelbruch 116

45219 Essen - Kettwig

Germany

Responsible for testing laboratory: Dipl.-Ing. Rachid Acharkaoui

Deputy: Dipl.-Ing. Niels Jeß

2.2 Test location

2.2.1Test laboratory "CTC"

Company name: see chapter 2.1 Identification of the testing laboratory

2.3 Organizational items

Responsible for test report: B.Eng. Martin Nunier

Project leader: M.Sc. Ajit Phadtare

Receipt of EUT: 2017-01-12

Date(s) of test: 2017-02-01 to 2017-03-17

Date of report: 2017-04-25

Version of template: 13.02

Remark 1: based on applicants tune-up info

2.4 Applicant's details

Applicant's name: Intel Corporation

Address: 2200 Mission College Boulevard

Santa Clara, CA 95054

USA

Contact person: +1 408-765-8080

2.5 Manufacturer's details

Manufacturer's name: Intel Deutschland GmbH

Address: Konrad-Zuse-Bogen 4,

82152 Krailling, GERMANY

3 Measurements

3.1.Test location

test location	☑ CETECOM Essen					
	For Evaluation instruments are not needed	valuation instruments are not needed. Results are determined by calculation based on applicants delivered Tune-Up				
	procedure.					

3.2 Evaluation Rules

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is ≤ 1.0 . The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field planewave equivalent conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

3.3 Limits

Table 1: LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

	(A) Limits for Occupational/Controlled Exposure							
Frequency range [MHz)	Electric field strength [V/m]	Magnetic field strength [A/m]						
0.3-3.0	614	1.63	(100)*	6				
3.0-30	1842/f	4.89/f	(900/f ²)*	6				
30-300	61.4	0.163	1.0	6				
300-1500				6				
1500-100,000				6				
	(B) Limits for G	Seneral Population/Uncontr	olled Exposure					
Frequency range	Electric field strength	Magnetic field strength	Power density	Averaging time				
[MHz)	[V/m]	[A/m]	[mW/cm ²]	[minutes]				
0.3-3.0	614	1.63	*(100)	30				
3.0-30	824/f	2.19/f	*(180/f²)	30				
30-300	27.5	0.073	0.2	30				
300-1500	-	-	f/1500	30				
1500-100,000	-	-	1.0	30				

f=frequency in MHz

NOTE1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure. These limits apply to amateur station licensees and members of their immediate household as discussed in the text.

NOTE2: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure. As discussed in the text, these limits apply to neighbours living near amateur radio stations.

^{*}Plane-wave equivalent power density

3.4 MPE Calculation method

Predication of MPE limit at a given distance Equation from page 18 of OET Bulletin 65, Edition 97-01

$$S = \frac{EIRP}{4\pi R^2} = \frac{P * G}{4\pi R^2}$$

$$G_{NUMERIC} = \frac{S * 4\pi R^2}{P}$$

Where: S=power density P=power input to antenna

G=power gain of the antenna in the direction of interest relative to an isotropic radiator

R=distance to the centre of radiation of the antenna

3.5 Conducted Output Power

Modulation: MSK / Data Rate: 50 Kbps						
Frequency (MHz)	2402.5	2436.5	2471.5			
Average Conducted Power (dBm)	10.19	19.93	9.32			
	Modulation: MSK / Da	ta Rate: 100 Kbps				
Frequency (MHz)	2402.5	2436.5	2471.5			
Average Conducted Power (dBm)	10.20	19.89	9.39			
	Modulation: MSK / Da	ta Rate: 250 Kbps				
Frequency (MHz)	2402.5	2436.5	2471.5			
Average Conducted Power (dBm)	10.19	19.78	9.40			
	Modulation: MSK / Da	ta Rate: 500 Kbps				
Frequency (MHz)	2402.5	2436.5	2471.5			
Average Conducted Power (dBm)	10.26	19.92	9.42			

3.6 Evaluation Method

3.6.1 Standalone

Valid for GSM/GPRS/EDGE mode:

- The power was tested on 3 frequencies (lowest/middle/highest) within each operable bands and the results compared to applicant's declared power values (tune-up info).
- Average burst power (slot power) and burst average values were measured;
- Measured burst average power at all TX slots possible for this device and calculated as worst-case
- A duty-cycle correction factor of 10*log10 (max. number of possible active slots / 8 slots) were applied

Please find in the following tables the calculations based on applicants tune-up information for the power values. Also the maximum admissible allowed antenna gain is calculated which is not exceeding the MPE limit for fixed and mobile operations.

Valid for W-CDMA/LTE Mode:

- The power was checked on 3 frequencies (lowest/middle/highest) within each operable FDD-band and the results compared to applicant's declared power values (tune-up info).
- No duty-cycle correction factor is applicable

Please find in the following tables the calculations based on applicants tune-up information for the power values. Also the maximum admissible allowed antenna gain is calculated which is not exceeding the MPE limit for fixed and mobile operations.

Valid for WLAN/BT Mode:

- The average power was checked on 3 frequencies (lowest/middle/highest) within each operable WiFi band and the results compared to applicant's declared power values (tune-up info). A RMS detector was used.
- No duty-cycle correction factor is applicable

Please find in the following tables the calculations based on applicants tune-up information for the power values.

Wireless	Output power*		Antenna	Duty	MPE	MPE	
Technologies	dBm	mW	Gain (dBi)	Gain Cycle		Limits (mW/cm ²)	Verdict
Modulation: MSK / Data Rate: 50 Kbps	20.93	123.8797	4.86	100%	0.0755	1.0000	Pass
Modulation: MSK / Data Rate: 100 Kbps	20.89	122.7439	4.86	100%	0.0748	1.0000	Pass
Modulation: MSK / Data Rate: 250 Kbps	20.78	119.6741	4.86	100%	0.0729	1.0000	Pass
Modulation: MSK / Data Rate: 500 Kbps	20.92	123.5947	4.86	100%	0.0753	1.0000	Pass

Remark:

- 1. Output power (Average) including tune-up tolerance;
- 2. Output power was adjust to duty cycle at 100% if measured duty cycle less than 98%;
- 3. MPE evaluate distance is 20cm from user manual provide by manufacturer;
- 4. Depending on output power and antenna gain only the worst case is reported;

3.6.2 Simultaneous Transmission MPE

According to KDB447498 for Transmitters used in mobile exposure conditions for simultaneous transmission operations; \sum of MPE ratios ≤ 1.0

RCM24G use only one transmitter antenna, no need consider simultaneous transmission.

3.7 Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.

4 Measurement uncertainties

The reported uncertainties are calculated based on the standard uncertainty multiplied with the appropriate coverage factor \mathbf{k} , such that a confidence level of approximately 95% is achieved.

For uncertainty determination, each component used in the concrete measurement set-up was taken in account and it's contribution to the overall uncertainty according it's statistical distribution calculated.

Following table shows expectable uncertainties for each measurement type performed.

RF-Measurement	Reference	Frequency range	Calculated uncertainty based on a confidence level of 95%			Remarks

5 Abbreviations used in this report

The abbreviation	The abbreviations				
ANSI	American National Standards Institute				
AV, AVG, CAV	Average detector				
EIRP	Equivalent isotropically radiated power, determined within a separate measurement				
EUT	Equipment Under Test				
FCC	Federal Communications Commission, USA				
n.a.	not applicable				
Op-Mode	Operating mode of the equipment				
PK	Peak				
RBW	resolution bandwidth				
RF	Radio frequency				
RSS	Radio Standards Specification, Documents from Industry Canada				
Rx	Receiver				
TCH	Traffic channel				
Tx	Transmitter				
QP	Quasi peak detector				
VBW	Video bandwidth				
ERP	Effective radiated power				

6 Accreditation details of CETECOM's laboratories and test sites

Ref No.	Accreditation Certificate	Valid for laboratory area or test site	Accreditation Body
-	D-PL- 12047-01-01	All laboratories and test sites of CETECOM GmbH, Essen	DAkkS, Deutsche Akkreditierungsstelle GmbH
337 487 558 348 348	MRA US-EU 0003	Radiated Measurements 30 MHz to 1 GHz, 3 m / 10 m (OATS) Radiated Measurements 30 MHz to 1 GHz, 3 m (SAR) Radiated Measurements above 1 GHz, 3 m (FAR) Mains Ports Conducted Interference Measurements Telecommunication Ports Conducted Interference Measurem.	FCC, Federal Communications Commission Laboratory Division, USA
337 487 550 558	3462D-1 3462D-2 3462D-2 3462D-3	Radiated Measurements 30 MHz to 1 GHz, 3 m / 10 m (OATS) Radiated Measurements 30 MHz to 1 GHz, 3 m (SAR) Radiated Measurements 1 GHz to 6 GHz, 3 m (SAR) Radiated Measurements above 1 GHz, 3 m (FAR)	IC, Industry Canada Certification and Engineering Bureau
487 550 348 348	R-2666 G-301 C-2914 T-1967	Radiated Measurements 30 MHz to 1 GHz, 3 m (SAR) Radiated Measurements 1 GHz to 6 GHz, 3 m (SAR) Mains Ports Conducted Interference Measurements Telecommunication Ports Conducted Interference Measurem. st Site, SAR = Semi Anechoic Room, FAR = Fully Anechoic Room	VCCI, Voluntary Control Council for Interference by Information Technology Equipment, Japan
