## 1. Summary of test results

The test results apply exclusively to the test samples as presented in this Report. The CETECOM GmbH does not assume responsibility for any conclusions and generalizations taken in conjunction with other specimens or samples of the type of the item presented to tests.

Following tests have been performed to show compliance with applicable FCC Part 2.1091 and FCC Part 1.1310 of the FCC CFR 47 Rules.

The presented  $\underline{\underline{U}}$  nder  $\underline{\underline{U}}$  nder  $\underline{\underline{T}}$  est(in this report, hereinafter referred as EUT): INTEL FALCON 8+ UAS integrates

- Total 1 of VLMTX58G (FCC-ID:2AJ2A-VLMTX58G) & supports operating frequency range from 5150 5850 MHz with specified protocol implementation. Measurements only valid and pass result with power setting: +10 dBm
- Total 2 of RCM24G (FCC-ID: 2AJ2A-RCM24G)Proprietary 2.4 GHz RF Transceiver & supports operating frequency range from 2402.5 2471.5 MHz.

## 1.8 EUT Set-ups

EUT set- up no.*)	Combination of EUT and AE	Description
set. 1	EUT A + AE 1 (+ AE 3)  [AE 1 was connected to AE 3 :WLAN 2.4 GHz access point]  [AE 3 was only used to set test mode & kept outside test chamber]	9kHz – 30 MHz   30 MHz – 1GHz   18 GHz – 40 GHz Radiated Measurements Set-up : <b>EUT Laying Position</b>
set. 1	EUT B + AE 2 (+ AE 3)  [AE 2 was connected to AE 3 :WLAN 2.4 GHz access point]  [AE 3 was only used to set test mode & kept outside test chamber]	1 GHz – 7 GHz   7 GHz – 18 GHz Radiated Measurements Set-up : <b>EUT Laying Position</b>
set. 2	EUT A + AE 1 (+ AE 3)  [AE 1 was connected to AE 3: WLAN 2.4 GHz access point]  [AE 3 was only used to set test mode & kept outside test chamber]	9kHz – 30 MHz   30 MHz – 1GHz   18 GHz – 40 GHz Radiated Measurements Set-up : <b>EUT Standing Position</b>
560.2	EUT B + AE 2 (+ AE 3)  [AE 2 was connected to AE 3 :WLAN 2.4 GHz access point]  [AE 3 was only used to set test mode & kept outside test chamber]	1 GHz – 7 GHz   7 GHz – 18 GHz  Radiated Measurements Set-up : <b>EUT Standing Position</b>

<sup>\*)</sup> EUT set-up no. is used to simplify the identification of the EUT set-up in this test report.

## 1.9 Configuration of cables used for testing

Cable number	Item	Туре	S/N serial number	HW hardware status	Cable length
Cable 1					

## 2 Administrative Data

## 2.1 Identification of the testing laboratory

Company name: CETECOM GmbH

Address: Im Teelbruch 116

45219 Essen - Kettwig

Germany

Responsible for testing laboratory: Dipl.-Ing. Rachid Acharkaoui

Deputy: Dipl.-Ing. Niels Jeß

### 2.2 Test location

## 2.2.1Test laboratory "CTC"

Company name: see chapter 2.1 Identification of the testing laboratory

## 2.3 Organizational items

Responsible for test report: M.Sc. Ajit Phadtare

Project leader: M.Sc. Ajit Phadtare

Receipt of EUT: 2017-01-12

Date(s) of test: 2017-02-01 to 2017-02-28

Date of report: 2017-04-27

\_\_\_\_\_

Version of template: 13.02

Remark 1: based on applicants tune-up info

### 2.4 Applicant's details

Applicant's name: Intel Corporation

Address: 2200 Mission College Boulevard

Santa Clara, CA 95054

USA

Contact person: +1 408-765-8080

## 2.5 Manufacturer's details

Manufacturer's name: Intel Deutschland GmbH

Address: Konrad-Zuse-Bogen 4,

82152 Krailling, GERMANY

## 3 Measurements

#### 3.1.Test location

test location	☑ CETECOM Essen		
	For Evaluation instruments are not needed	d. Results are determined by calculation ba	sed on applicants delivered Tune-Up
	procedure.		

#### 3.2 Evaluation Rules

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is  $\leq 1.0$ . The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field planewave equivalent conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

#### 3.3 Limits

Table 1: LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

	(A) Limits for Occupational/Controlled Exposure									
Frequency range [MHz)	Electric field strength [V/m]	Magnetic field strength [A/m]	Power density [mW/cm <sup>2</sup> ]	Averaging time [minutes]						
0.3-3.0	614	1.63	(100)*	6						
3.0-30	1842/f	4.89/f	(900/f <sup>2</sup> )*	6						
30-300	61.4	0.163	1.0	6						
300-1500				6						
1500-100,000				6						
	(B) Limits for G	Seneral Population/Uncontr	olled Exposure							
Frequency range	Electric field strength	Magnetic field strength	Power density	Averaging time						
[MHz)	[V/m]	[A/m]	[mW/cm <sup>2</sup> ]	[minutes]						
0.3-3.0	614	1.63	*(100)	30						
3.0-30	824/f	2.19/f	*(180/f²)	30						
30-300	27.5	0.073	0.2	30						
300-1500	-	-	f/1500	30						
1500-100,000	-	-	1.0	30						

f=frequency in MHz

NOTE1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure. These limits apply to amateur station licensees and members of their immediate household as discussed in the text.

NOTE2: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure. As discussed in the text, these limits apply to neighbours living near amateur radio stations.

<sup>\*</sup>Plane-wave equivalent power density

## 3.4 MPE Calculation method

Predication of MPE limit at a given distance Equation from page 18 of OET Bulletin 65, Edition 97-01

$$S = \frac{EIRP}{4\pi R^2} = \frac{P * G}{4\pi R^2}$$

$$G_{NUMERIC} = \frac{S * 4\pi R^2}{P}$$

Where: S=power density

P=power input to antenna

G=power gain of the antenna in the direction of interest relative to an isotropic radiator

R=distance to the centre of radiation of the antenna

## 3.5 Conducted Output Power

Average Conducted Power (dBm)	10.26	19.92	9.42						

#### 3.6 Evaluation Method

#### 3.6.1 Standalone

#### Valid for GSM/GPRS/EDGE mode:

- The power was tested on 3 frequencies (lowest/middle/highest) within each operable bands and the results compared to applicant's declared power values (tune-up info).
- Average burst power (slot power) and burst average values were measured;
- Measured burst average power at all TX slots possible for this device and calculated as worst-case
- A duty-cycle correction factor of 10\*log10 (max. number of possible active slots / 8 slots) were applied

Please find in the following tables the calculations based on applicants tune-up information for the power values. Also the maximum admissible allowed antenna gain is calculated which is not exceeding the MPE limit for fixed and mobile operations.

#### Valid for W-CDMA/LTE Mode:

- The power was checked on 3 frequencies (lowest/middle/highest) within each operable FDD-band and the results compared to applicant's declared power values (tune-up info).
- No duty-cycle correction factor is applicable

Please find in the following tables the calculations based on applicants tune-up information for the power values. Also the maximum admissible allowed antenna gain is calculated which is not exceeding the MPE limit for fixed and mobile operations.

### Valid for WLAN/BT Mode:

- The average power was checked on 3 frequencies (lowest/middle/highest) within each operable WiFi band and the results compared to applicant's declared power values (tune-up info). A RMS detector was used.
- No duty-cycle correction factor is applicable

Please find in the following tables the calculations based on applicants tune-up information for the power values.

### **INTEL FALCON 8+ UAS: 5 GHz Transmitter Module**

The presented Equipment Under Test INTEL FALCON 8+ UAS integrates

- Total 1 of VLMTX58G (FCC-ID:2AJ2A-VLMTX58G) MIMO Module & supports operating frequency range from 5150 5850 MHz with specified protocol implementation.
- During the tests Antenna 0 & Antenna 1 were connected to the MIMO ports of VLMTX58G module.

## **INTEL FALCON 8+ UAS: 2.4 GHz Transmitter Modules**

The presented Equipment Under Test: INTEL FALCON 8+ UAS integrates

- Total 2 of RCM24G (FCC-ID: 2AJ2A-RCM24G)Proprietary 2.4 GHz RF Transceiver & supports operating frequency range from 2402.5 2471.5 MHz.
- RCM24G (FCC-ID: 2AJ2A-RCM24G) Module has only one RF Output Port & does not support MIMO operations.
- During tests Antenna 2 was connected to RCM24G Module 1 & Antenna 3 was connected to RCM24G Module 2.

	INTEL FALCON 8+ UAS: 2.4 GHz Transmitter Modules RCM24G Module 1+ Antenna 2 & RCM24G Module 2+ Antenna 3										
Wireless Technologies	Output dBm	power* mW	Antenna Gain (dBi)	Duty Cycle	MPE (mW/cm <sup>2</sup> )	MPE Limits (mW/cm <sup>2</sup> )	Verdict				
Modulation: MSK / Data Rate: 50 Kbps	20.93	123.8797	2.5	100%	0.0438	1.0000	Pass				
Modulation: MSK / Data Rate: 100 Kbps	20.89	122.7439	2.5	100%	0.0434	1.0000	Pass				
Modulation: MSK / Data Rate: 250 Kbps	20.78	119.6741	2.5	100%	0.0423	1.0000	Pass				
Modulation: MSK / Data Rate: 500 Kbps	20.92	123.5947	2.5	100%	0.0437	1.0000	Pass				

#### Remark:

- 1. Output power (Average) including turn-up tolerance;
- 2. Output power was adjust to duty cycle at 100% if measured duty cycle less than 98%;
- 3. MPE evaluate distance is 20cm from user manual provide by manufacturer;

### 3.6.2 Simultaneous Transmission MPE

According to KDB447498 for Transmitters used in mobile exposure conditions for simultaneous transmission operations;  $\sum$  of MPE ratios  $\leq$  1.0

### 3.1.6.2.1 Summary simultaneous transmission information

Wireless	Work			Synchronization		
Technologies	Frequency Band	Antenna 0	Antenna 1	Antenna 2	Antenna 3	transmit
BPSK, OFDM, MSK	5 GHz 2.4 GHz	$\boxtimes$	$\boxtimes$	$\boxtimes$	$\boxtimes$	

## 3.6.2.2 Summary simultaneous transmission results

	Simultaneous transmission results at Antenna 0, Antenna 1, Antenna 2 and Antenna 3									
$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$										
BPSK, OFDM, MSK	0.0148	0.0151	0.0438	0.0438	0.1175	1.0	PASS			

Remark: Depending on output power only the worst case is reported;

### 3.7 Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.

## 4 Measurement uncertainties

The reported uncertainties are calculated based on the standard uncertainty multiplied with the appropriate coverage factor  $\mathbf{k}$ , such that a confidence level of approximately 95% is achieved.

For uncertainty determination, each component used in the concrete measurement set-up was taken in account and it's contribution to the overall uncertainty according it's statistical distribution calculated.

Following table shows expectable uncertainties for each measurement type performed.

RF-Measurement	Reference	Frequency range	Calculated uncertainty based on a confidence level of 95%			Remarks			
Conducted emissions (U CISPR)	CISPR 16-2-1	9 kHz - 150 kHz 150 kHz - 30 MHz	4.0 dB 3.6 dB			-			
Radiated emissions Enclosure	CISPR 16-2-3	30 MHz - 1 GHz 1 GHz - 18 GHz	4.2 dB 5.1 dB				E-Field		
Disturbance power	CISPR 16-2-2	30 MHz - 300 MHz	-				-		
Power Output radiated	-	30 MHz - 4 GHz	3.17 dB				Substitution method		
De la Original de la		Set-up No.	Cel- C1	Cel- C2	BT1	W1	W2		
Power Output conducted	-	9 kHz - 12.75 GHz	N/A	0.60					-
		12.75 - 26.5GHz	N/A	0.82					
Conducted emissions	-	9 kHz - 2.8 GHz	0.70	N/A		-			N/A - not
on RF-port		2.8 GHz - 12.75GHz	1.48	N/A					applicable
		12.75 GHz - 18GHz	1.81	N/A					
		18 GHz - 26.5GHz	1.83	N/A					
			0.1272 ppm (Delta Marker)				Frequency		
Occupied bandwidth	-	9 kHz - 4 GHz	1.0.10				error		
			1.0 dB			Power			
Emission bandwidth	- 0.1272 ppm (Delta Marker) 9 kHz - 4 GHz				)		Frequency		
Emission bandwidth	-	9 KHZ - 4 GHZ	See above: 0.70 dB					error Power	
Frequency stability	-	9 kHz - 20 GHz	0.0636 ppm				-		
Radiated emissions Enclosure	-	150 kHz - 30 MHz 30 MHz - 1 GHz 1 GHz - 20 GHz	5.0 dB 4.2 dB 3.17 dB				Magnetic field E-field Substitution		

Table: measurement uncertainties, valid for conducted/radiated measurements

# **5** Abbreviations used in this report

The abbreviations				
ANSI	American National Standards Institute			
AV, AVG, CAV	Average detector			
EIRP	Equivalent isotropically radiated power, determined within a separate measurement			
EUT	Equipment Under Test			
FCC	Federal Communications Commission, USA			
n.a.	not applicable			
Op-Mode	Operating mode of the equipment			
PK	Peak			
RBW	resolution bandwidth			
RF	Radio frequency			
RSS	Radio Standards Specification, Documents from Industry Canada			
Rx	Receiver			
TCH	Traffic channel			
Tx	Transmitter			
QP	Quasi peak detector			
VBW	Video bandwidth			
ERP	Effective radiated power
