## RF EXPOSURE EVULATION

### 1.1 Limit

According to $\S 1.1310$ and $\S 2.1091$ RF exposure is calculated.
(B) Limits for General Population/Uncontrolled Exposures

| Frequency range (MHz) | Electric field <br> Strength | Magnetic field <br> Strength | Power density | Averaging <br> time |
| :---: | :---: | :---: | :---: | :---: |
| 1.34-30.............................. | 824/f | 2.19/f | *(180/ f²) | 30 |
| 30-300............................... | 27.5 | 0.073 | 0.2 | 30 |
| 300-1500............................. | ........... | ............ | f/1500 | 30 |
| 1500-100.000........................... | ...... | - $\quad$.... | 1.0 | 30 |

F = frequency in MHz

* = Plane-wave equivalent power density

### 1.2 MAXIMUM PERMISSIBLE EXPOSURE Prediction

Prediction of MPE limit at a given distance
Power density at the specific separation:

| $\mathrm{S}=\mathrm{PG} /\left(4 \mathrm{R}^{2} \pi\right)$ | Where, |
| :--- | :--- |
| $\mathrm{S}=(0.07 * 0.09) /\left(4 * 5^{2} * \pi\right)$ | $\mathrm{S}=$ Maximum power density $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ |
| $\mathrm{S}=0.03 \mathrm{~mW} / \mathrm{cm}^{2}$ | $\mathrm{G}=$ Power input to the antenna $(\mathrm{mW})$ |
|  | $\mathrm{R}=$ Distance to the center of the radiation of the antenna |
|  | $(20 \mathrm{~cm}=$ limit for MPE $)$ |

FCC ID: 2AJ6BBHTV16D000 ATTACHMENT

### 1.3 MAXIMUM PERMISSIBLE EXPOSURE Prediction

- Calculated under the worst-case conditions of each mode.
(Measured power - $\mathbf{1 1 ~ d B m} \pm 0.5 \mathrm{~dB}$ )

## 3-1. 2.4 GHz Mode

| Max Peak output Power at antenna input terminal | -11.32 | dBm |
| :--- | :---: | :---: |
| Max Peak output Power at antenna input terminal | 0.07 | mW |
| Prediction distance | 5 | mm |
| Prediction frequency | 2,402 | MHz |
| Antenna Gain(typical) | 1.3 | dBi |
| Antenna Gain(numeric) | 1.35 | - |
| Power density at prediction frequency( S) | 0.03 | $\mathrm{~mW} / \mathrm{cm}^{2}$ |
| MPE limit for uncontrolled exposure at prediction frequency | 0.005 | $\mathrm{~mW} / \mathrm{cm}^{2}$ |

SAR Test exclusion thresholds for 100 MHz to 6 GHz at test separation distance $\leq 50 \mathrm{~mm}=$ Used [(max.power of channel, including tune-up torelance, mW$) /($ min. test separation distance, mm$)]$ * $[\mathrm{Vf}(\mathrm{GHz})]$ $=[0.07 / 5] *[\sqrt{ } 2.402]=0.02 \leq 3.0$, for 1 g SAR
Thus, SAR for this device is not required.
