Please kindly see the frequency hopping description as below:

Hopping pattern of 902MHz-926MHz, to the frequency hopping sequence 914MHz as the center, go to both sides, each frequency + 400KHz and -400KHz (First decrease, then add); When reaching both sides 902MHZ and 926MHz，914MHZ frequency hopping and then to the center on both sides to the center jump，Each frequency hopping + 400KHz and -400KHz (Add first and then subtract)；Frequency range during frequency hopping remains unchanged。

Such as: F0=913.8MHz±n*0.40MHz n=1, 2.....29

Example: Just started the center frequency 913.8MHz, then jump to 913.4MHz (-0.40MHz), 914.2MHz (+ 0.40MHz), 913.0MHz, 914.6MHz ....., finally jump to 902MHZ and 926MHz

Then again from 902MHz and 926MHz to start frequency hopping again, then jumps 902.6MHz (+ 0.40MHz), 925.4MHz (-0.40MHz), 903.0MHz, 925.00MHz ....., Finally, jump back to 914MHz. This completes a cycle frequency hopping
