

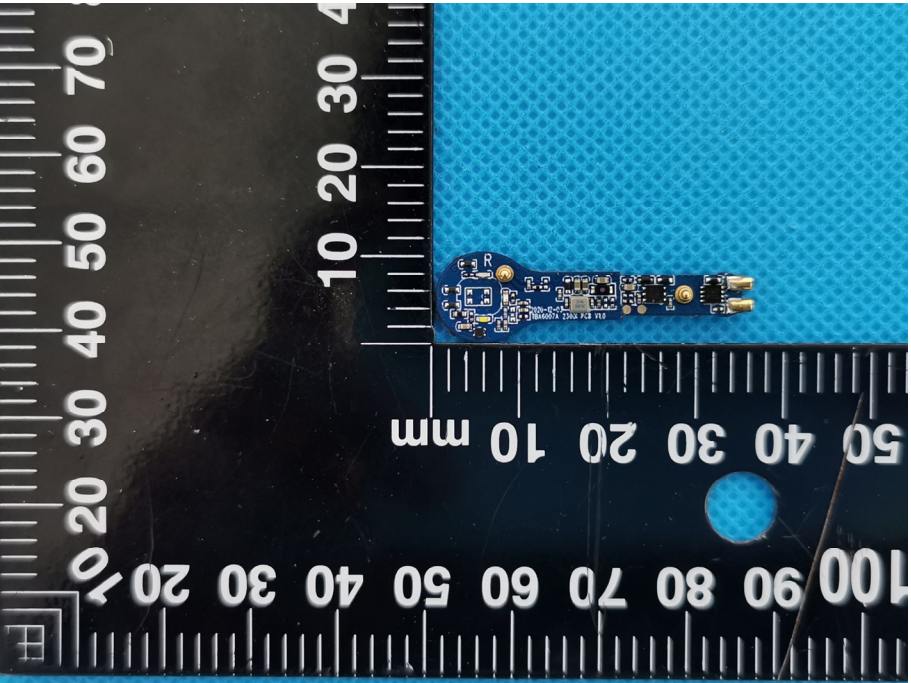

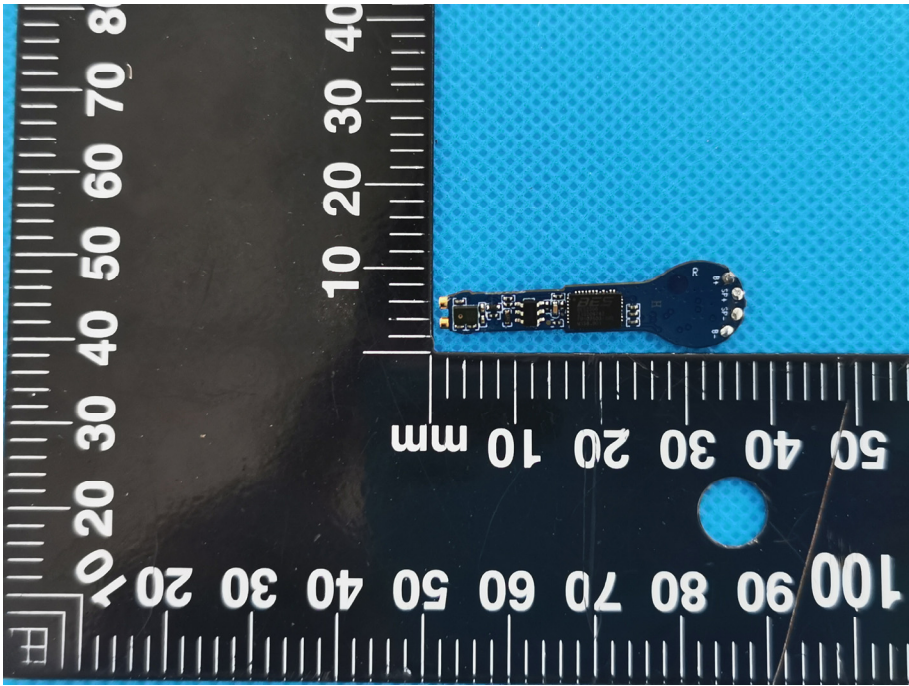

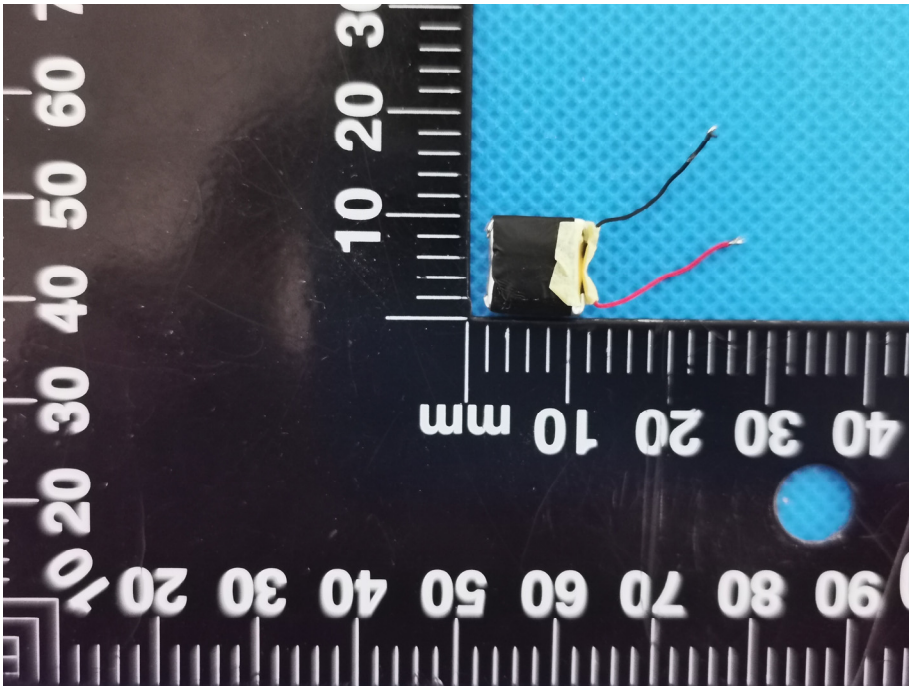

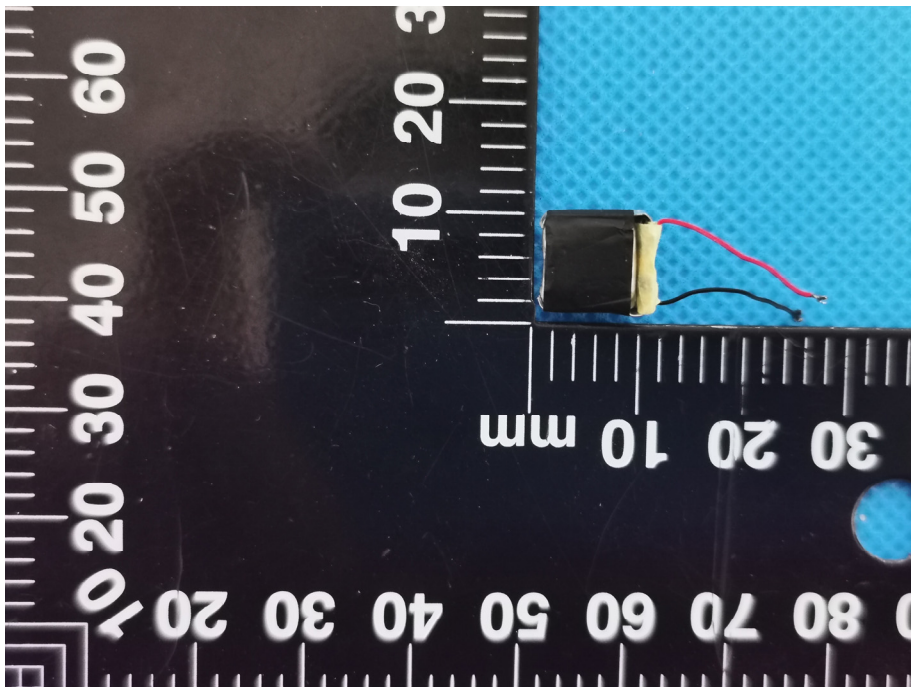

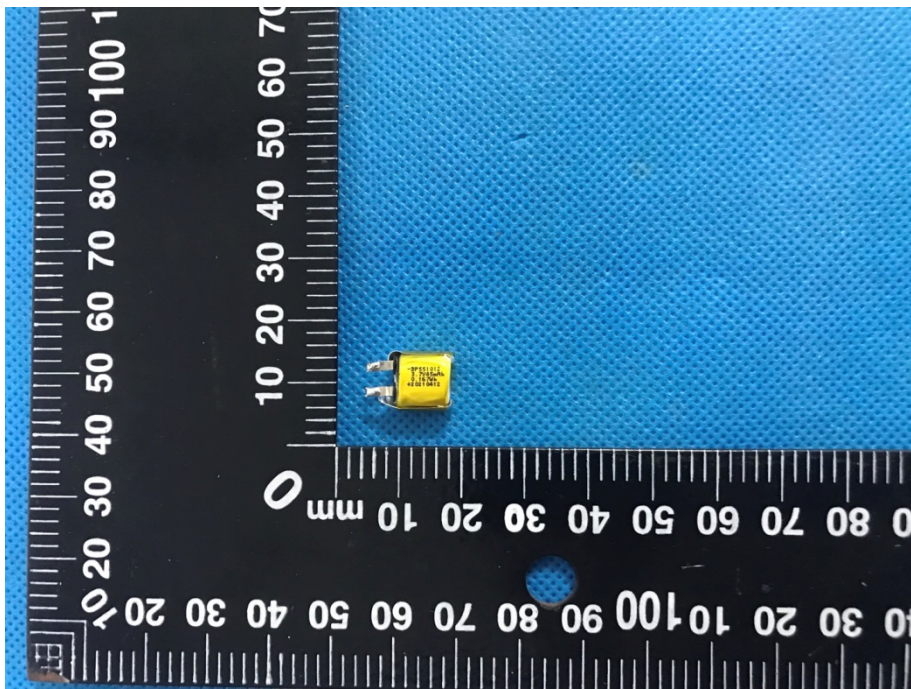

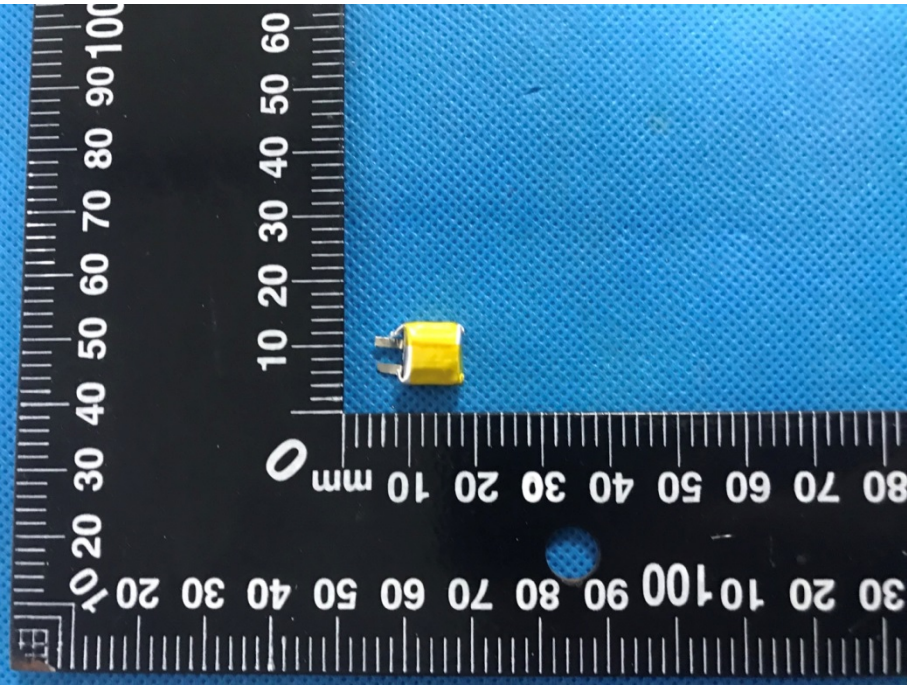

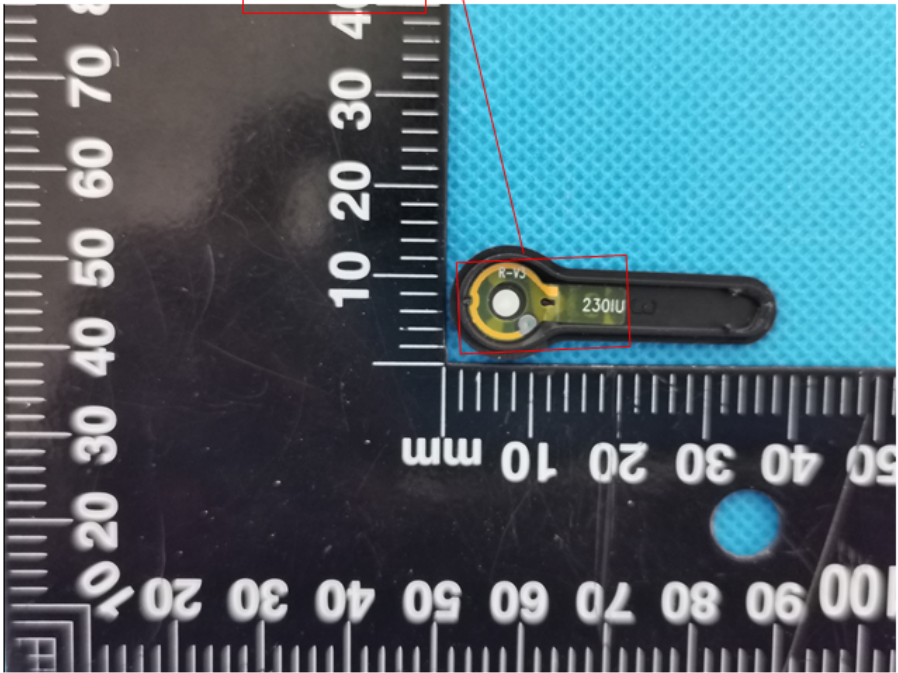

EXHIBIT 3 - EUT INTERNAL PHOTOGRAPHS

Right headset

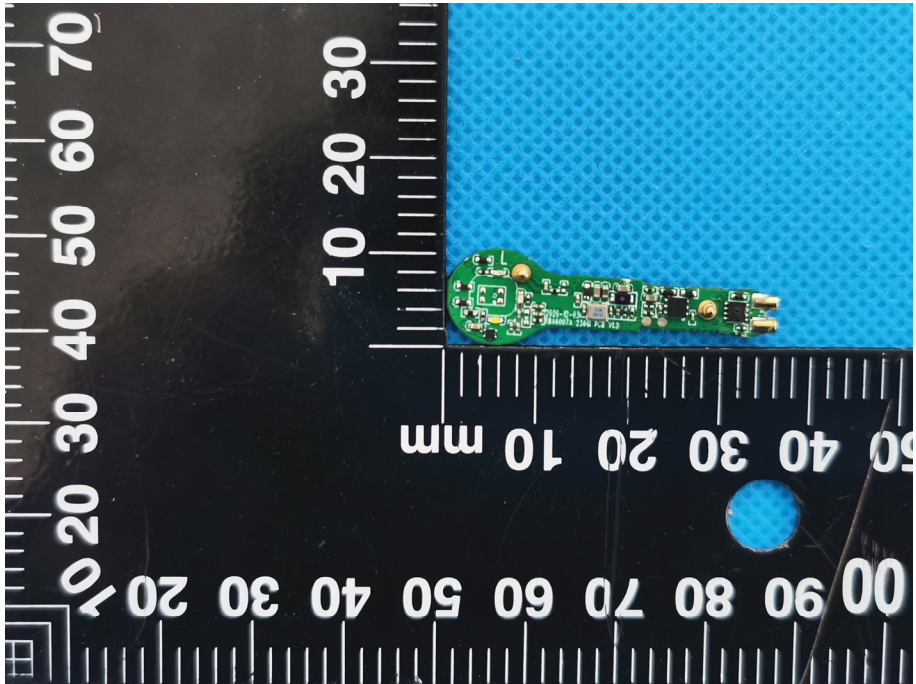

<p>EUT Housing and Board View 1</p>	 <p>This photograph shows the disassembled components of the right headset. On the left is a black plastic housing with a yellow circular component. To its right is a small blue printed circuit board (PCB) with various electronic components. Further right is a black plastic component with a lens. A black ruler with white markings is placed below the components for scale, showing measurements in millimeters. The background is a blue textured surface.</p>
<p>Solder Board-Component View 1</p>	 <p>This is a close-up photograph of the blue PCB component shown in the previous view. The board is populated with several surface-mount components, including resistors and capacitors. Two gold-plated connectors are visible on the right side of the board. A black ruler with white markings is placed below the board for scale, showing measurements in millimeters. The background is a blue textured surface.</p>

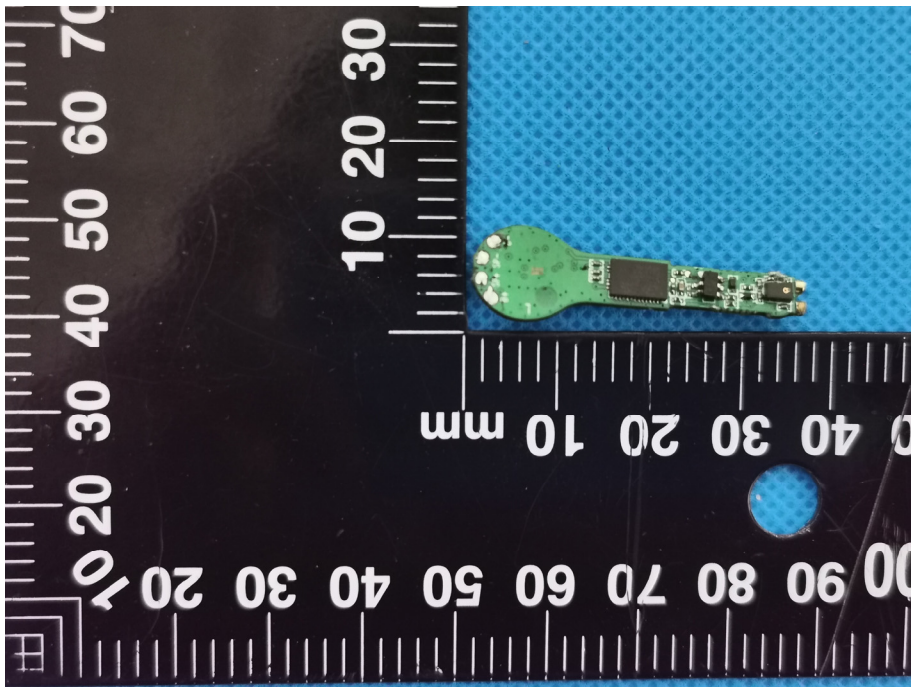

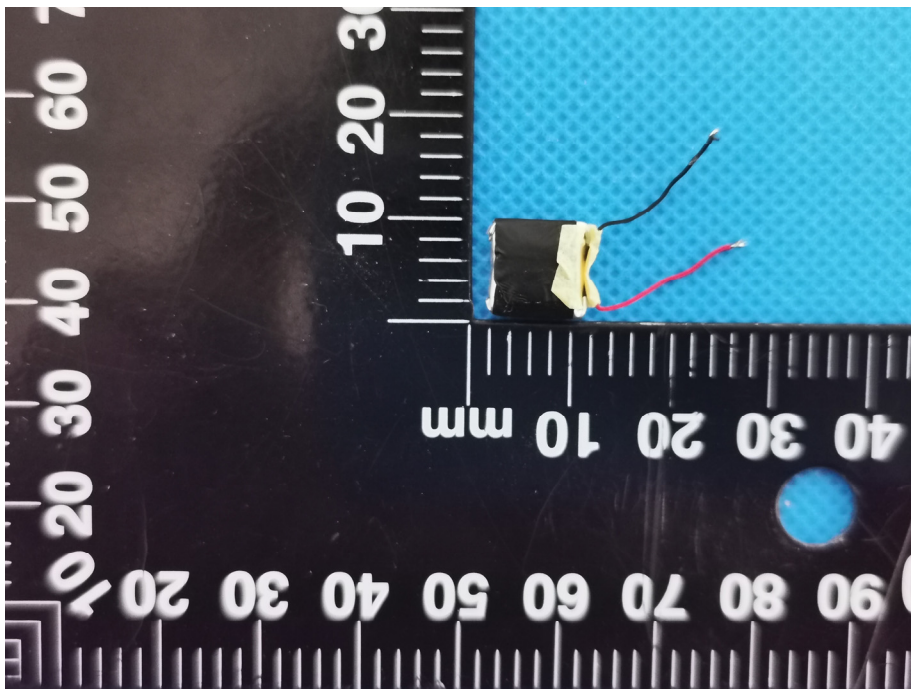

<p>Solder Board-Component View 2</p>	 A photograph showing a small electronic component, likely a microcontroller or sensor, mounted on a blue PCB. The component is positioned on a black surface with a white ruler for scale. The ruler shows markings from 0 to 100 mm. The component is oriented vertically, with its pins visible on the right side. The background is a blue textured surface.
<p>Solder Board-Component View 3</p>	 A photograph showing a small electronic component, likely a microcontroller or sensor, mounted on a blue PCB. The component is positioned on a black surface with a white ruler for scale. The ruler shows markings from 0 to 100 mm. The component is oriented vertically, with its pins visible on the right side. The background is a blue textured surface.

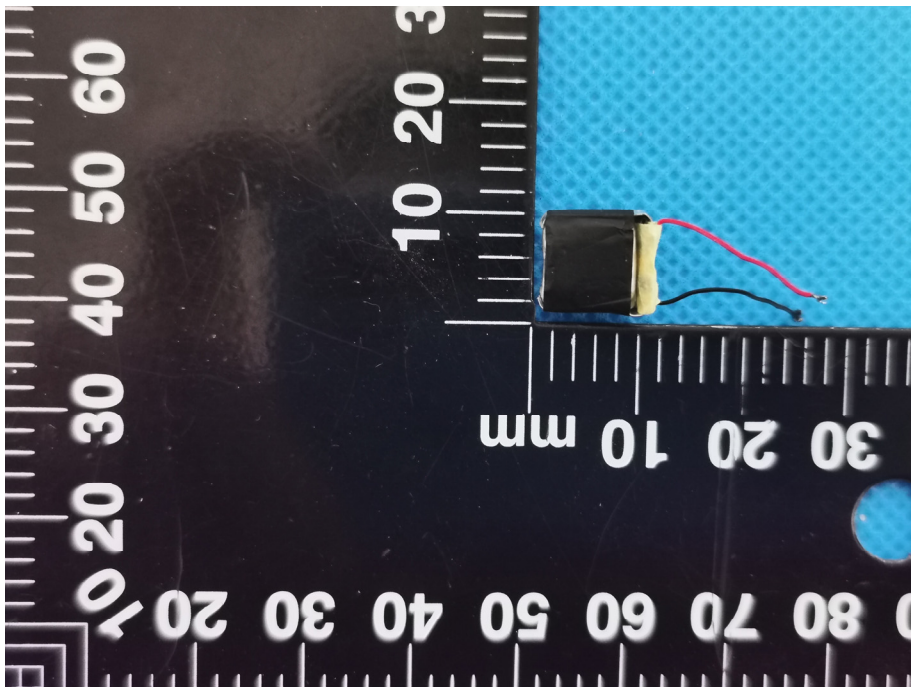

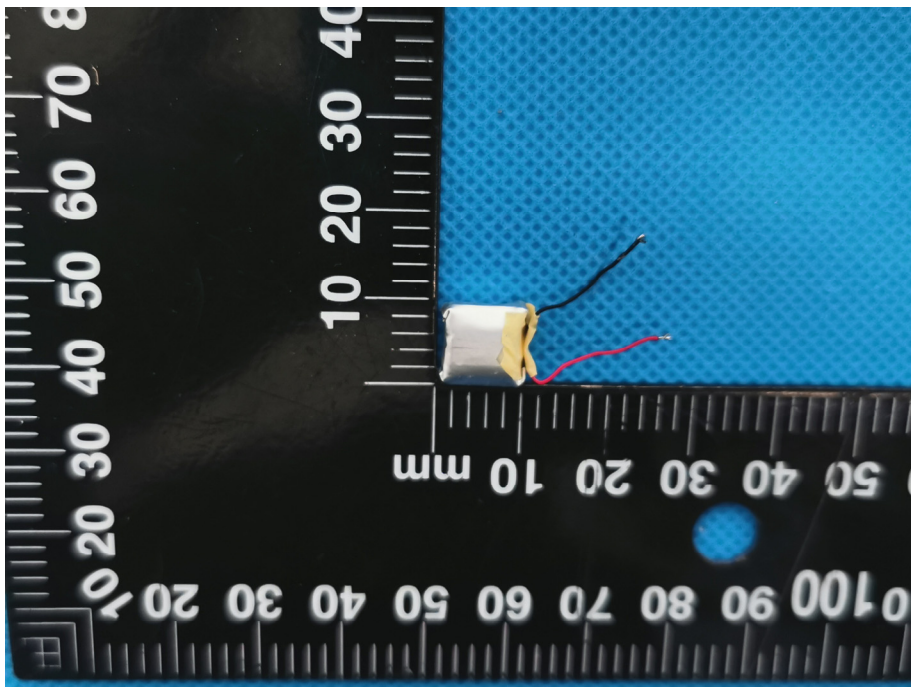

<p>Solder Board-Component View 4</p>	 A photograph showing a small, rectangular, black component with two thin wires (one red, one black) extending from it. The component is placed on a blue textured surface. A black ruler with white markings is visible in the background, showing measurements in millimeters. The ruler is oriented vertically, with markings from 0 to 100 mm visible.
<p>Solder Board-Component View 5</p>	 A photograph showing a small, rectangular, yellow component with two pins extending from it. The component is placed on a blue textured surface. A black ruler with white markings is visible in the background, showing measurements in millimeters. The ruler is oriented vertically, with markings from 0 to 100 mm visible.

<p style="text-align: center;">Solder Board-Component View 6</p>	 <p>A photograph showing a small yellow component with two pins, likely a capacitor, mounted on a blue textured surface. A black ruler with white markings is placed below the component for scale. The ruler shows measurements in millimeters, with the component positioned between the 10 mm and 20 mm marks.</p>
<p style="text-align: center;">Antenna View</p>	 <p>A photograph showing a black antenna component with a circular gold-colored pad. A red box highlights the circular pad, and a red line points to a label "BT Antenna" above it. The component is placed on a blue textured surface next to a black ruler with white markings. The ruler shows measurements in millimeters, with the antenna positioned between the 10 mm and 20 mm marks. The component has "230IU" printed on it.</p>

Left headset

<p>EUT Housing and Board View 1</p>	 A photograph showing the disassembled components of a left headset. On the left is a black plastic housing with a circular opening. In the center is a green printed circuit board (PCB) with various electronic components and a small red LED. To the right is a black microphone assembly with a silver mesh grille. The components are placed on a blue textured surface next to a black ruler with white markings in millimeters.
<p>Solder Board-Component View 1</p>	 A close-up photograph of a green PCB component, likely a microphone or sensor board, showing its solder joints. The board is positioned on a blue textured surface next to a black ruler with white markings in millimeters.

<p>Solder Board-Component View 2</p>	 A photograph showing a small green printed circuit board (PCB) component with several soldered connections. The component is placed on a blue textured surface. A black ruler with white markings is visible in the background, showing measurements in millimeters. The ruler is oriented vertically, with the 10 mm mark at the top and the 70 mm mark at the bottom. The component is positioned between the 10 mm and 30 mm marks.
<p>Solder Board-Component View 3</p>	 A photograph showing a small black component with two wires (one red, one black) attached. The component is placed on a blue textured surface. A black ruler with white markings is visible in the background, showing measurements in millimeters. The ruler is oriented vertically, with the 10 mm mark at the top and the 70 mm mark at the bottom. The component is positioned between the 10 mm and 30 mm marks.

<p>Solder Board-Component View 4</p>	 A photograph showing a small, rectangular component with a black top surface and a yellow bottom surface. Two thin wires, one red and one black, are attached to the component. The component is placed on a blue textured surface. A black ruler with white markings is visible in the background, showing measurements in millimeters. The ruler is oriented vertically, with the 10 mm mark at the top and the 30 mm mark at the bottom.
<p>Solder Board-Component View 5</p>	 A photograph showing a small, rectangular component with a white top surface and a yellow bottom surface. Two thin wires, one red and one black, are attached to the component. The component is placed on a blue textured surface. A black ruler with white markings is visible in the background, showing measurements in millimeters. The ruler is oriented vertically, with the 10 mm mark at the top and the 30 mm mark at the bottom.
