# Project antenna report

Antenna Engineer: Wu Jiaxiang

Report Edition: 20241009 V1.0

- Introduction to project development
- Report version feed
- NTN antenna matching circuit
- NTN antenna passive debugging S-parameters
- GPS antenna matching circuit
- GPS antenna passive debugging S-parameters
- BT antenna matching circuit
- BT antenna passive debugging S-parameters
- Antenna isolation parameters
- NTN antenna parameter prediction
- Environmental treatment
- Summary

# Introduction to project development

Main antenna	Band		Antenna status	Antenna form	Design area	Match the changes
	NTN	23/255/256	FPC	PIFA	Bottom of the mockup	not
Other antennas	GPS, Glonass, Galileo, Beidou	1575.42MHz~1602MHz	FPC	PIFA	Mockup top	not
	BT	2.4GHz~2.48GHz	FPC	PIFA	The upper right of the prototype	not
Mockup status	Prototype for trial production		Environmental treatment	There are multiple environmental treatments		

# Report version feed

version	date	Content overview
V1.0	20241009	Passive verification of the antenna of the trial production prototype.

The whole machine EMC processing OK without interference, the average OTA performance of each frequency band is expected to be compared as follows (antenna OTA performance reaches the test standard Class B):

Band	Channel	TX	Rx	Ant Efficiency		OTA Estimation		Loss	Gap	
				TX	RX	TRP	TIS		TRP	TIS
B23 (S band)	7501	22.6	-115	-3.51	-3.43	19.09	-111.57	1.5	1.59	2.07
	7600			-3.26	-3.50	19.34	-111.5	1.5	1.84	2
	7699			-3.19	-3.57	19.41	-111.43	1.5	1.91	1.93
B255 (L band)	228737	22.6	-115	-4.16	-2.62	18.44	-112.38	1.5	0.94	2.88
	228096			-3.39	-3.59	19.21	-111.41	1.5	1.71	1.91
	229075			-3.36	-3.04	19.24	-111.96	1.5	1.74	2.46
B256 (S band)	229077	22.6	-115	-3.83	-3.42	18.77	-111.58	1.5	1.27	2.08
	229226			-3.73	-3.50	18.87	-111.5	1.5	1.37	2
	229375			-3.26	-3.57	19.34	-111.43	1.5	1.84	1.93

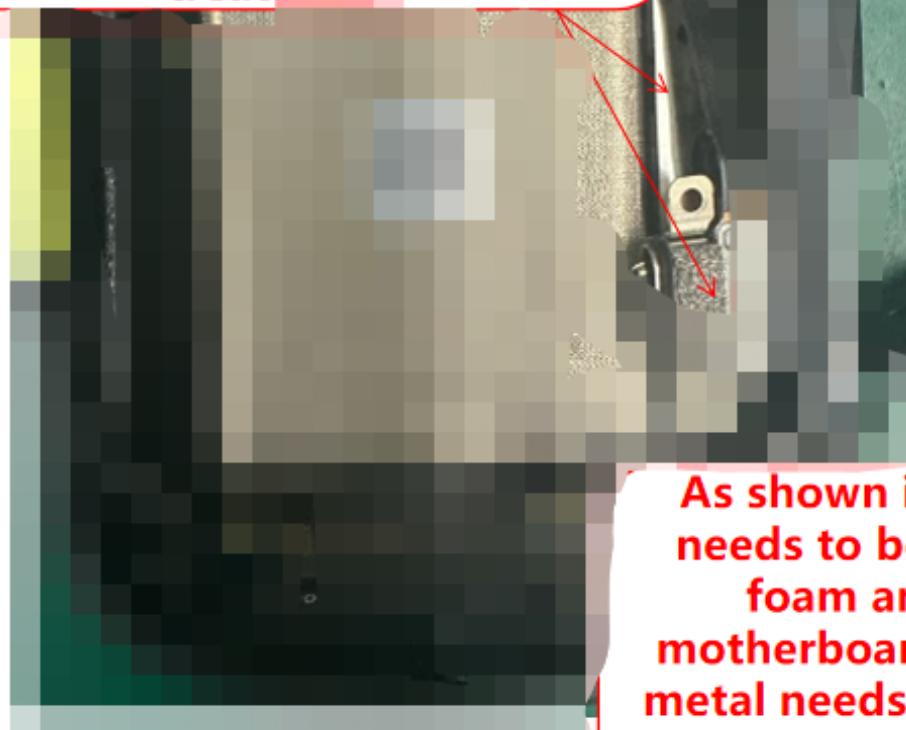

## Environmental treatment

As shown in the figure, the button position needs to be grounded with conductive cloth, which is used for the grounding environment treatment between the key FPC metal reinforcement board and the motherboard.

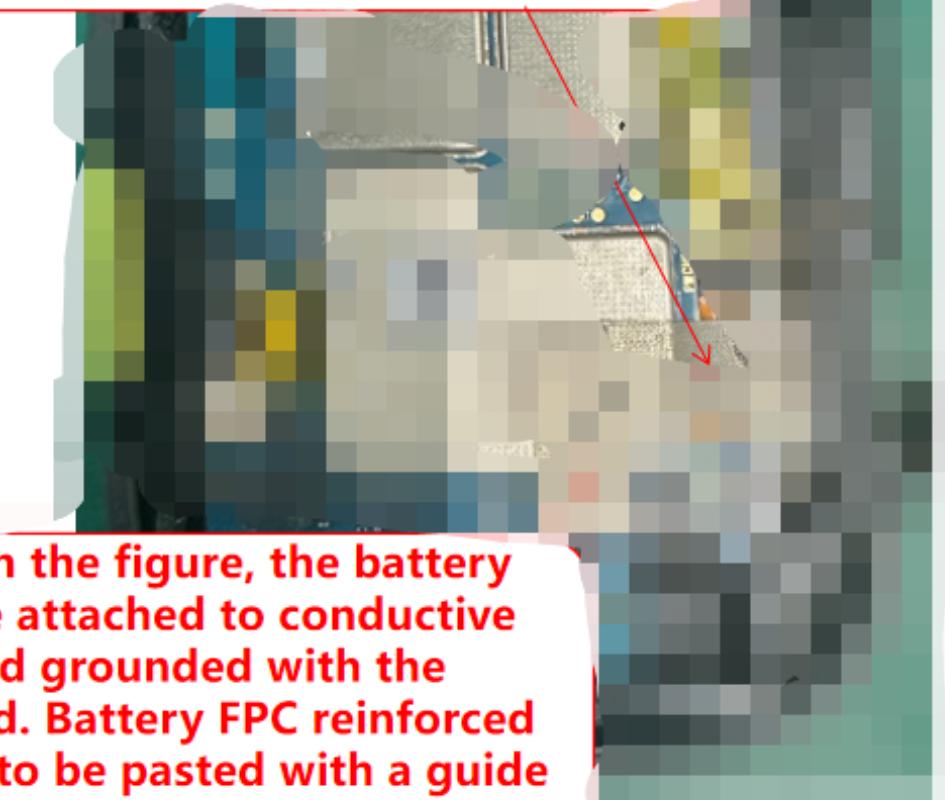

# Environmental treatment

As shown in the figure, TYPE C needs to be pasted with conductive foam and LED lamp metal reinforcement board to do grounding environment treatment.

As shown in the figure, TYPE C needs to be treated with a grounding environment with a guide cloth and the motherboard.

As shown in the figure, the battery needs to be attached to conductive foam and grounded with the motherboard. Battery FPC reinforced metal needs to be pasted with a guide cloth and the motherboard for grounding environment treatment.

# Summary

1. The passive efficiency of the NTN antenna of the trial production prototype  $\geq 30\%$ . The passive efficiency of the GPS antenna  $\geq 30\%$ . BT antenna passive efficiency  $\geq 30\%$ .
2. Passive verification of the antenna of the trial prototype, the isolation degree of NTN and GPS antennas is -12.05dB, the isolation degree of NTN and BT antennas is -23.4dB, and the isolation degree of GPS and BT antennas is -13.86dB.
