## RF Exposure Compliance Requirement

1 Standard requirement
Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess limit for maximum permissible exposure. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as a mobile device whereby a distance of 0.2 m normally can be maintained between the user and the device.
(a) Limits for Occupational / Controlled Exposure

| Frequency Range (MHz) | Electric Field <br> Strength (E) (V/m) | Magnetic Field <br> Strength (H) <br> (A/m) | Power Density $(\mathrm{S})\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Averaging Times $\|E\|^{2},\|H\|^{2}$ or $S$ (minutes) |
| :---: | :---: | :---: | :---: | :---: |
| 0.3-3.0 | 614 | 1.63 | (100)* | 6 |
| 3.0-30 | 1842/f | 4.89/f | (900/f)* | 6 |
| 30-300 | 61.4 | 0.163 | 1.0 | 6 |
| 300-1500 | -- | -- | F/300 | 6 |
| 1500-100000 | -- | -- | 5 | 6 |

(b) Limits for General Population / Uncontrolled Exposure

| Frequency Range (MHz) | Electric Field <br> Strength (E) (V/m) | Magnetic Field <br> Strength (H) <br> (A/m) | Power Density (S)(mW/cm ${ }^{2}$ ) | Averaging Times <br> $\|E\|^{2},\|H\|^{2}$ or $S$ <br> (minutes) |
| :---: | :---: | :---: | :---: | :---: |
| 0.3-1.34 | 614 | 1.63 | (100)* | 30 |
| 1.34-30 | 824/f | 2.19/f | (180/f)* | 30 |
| 30-300 | 27.5 | 0.073 | 0.2 | 30 |
| 300-1500 | -- | -- | F/1500 | 30 |
| 1500-100000 | -- | -- | 1.0 | 30 |

Note: f=frequency in MHz; *Plane-wave equivalent power density

2 MPE Calculation Method
$E(V / m)=\left(30^{*} P^{*} G\right)^{0.5} / d \quad$ Power Density: $P d\left(W / m^{2}\right)=E^{2} / 377$
$\mathrm{E}=$ Electric Field (V/m)
P=Peak RF output Power (W)
G=EUT Antenna numeric gain (numeric)
$\mathrm{d}=$ Separation distance between radiator and human body (m)
The formula can be changed to
$P d=\left(30^{*} P^{*} G\right) /\left(377^{*} d^{2}\right)$
From the peak EUT RF output power, the minimum mobile separation distance, $\mathrm{d}=0.2 \mathrm{~m}$, as well as the gain of the used antenna, the RF power density can be obtained.

## 3 Calculated Result and Limit

| (1) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency (MHz) | Antenna Gain <br> (Numeric) | Peak Output Power (dBm) | Peak Output <br> Power (mW) | Power Density <br> (S) (mW/cm ${ }^{2}$ ) | Limit of Power Density (S) ( $\mathrm{mW} / \mathrm{cm}^{2}$ ) | Test Result |
| 433.92 | 0 | -19.38 | 0.0115 | 0.0000023 | 0.29 | Complies |
