Exhibit 12: Additional Information in
Response to FCC part 97.13(c)(1)

**External Radio Frequency
Power Amplifier ACOM 700S**

Model 700S

Additional Information in Response to FCC part 97.13(c) (1)

This product designated ACOM700S HF+6m linear amplifier, hereafter ACOM700S, is an external radio frequency power amplifier that is designed to be a part of an amateur radio station. The equipment is capable to provide 700W output power that exceeds the limits given in part 97.13(c)(1), therefore the licensee of the amateur radio station, the ACOM 700S is part of, must perform the routine RF environmental evaluation prescribed by §1.1307(b).

If the routine environmental evaluation indicates that the RF electromagnetic fields could exceed the limits contained in §1.1310 in accessible areas, the licensee must take action to prevent human exposure to such RF electromagnetic fields.

Besides the other measures that normally concern the station antennas, the ACOM 700S can be operated at any lower power level that may also reduce the effective radiated power and RF electromagnetic fields strength..
