## Maximum Permissible Exposure Evaluation FCC ID: 2AKBP-Q10CW

## 1. Client Information

| Applicant | $:$ | Shenzhen Hysiry Technology Co., Ltd. |
| :--- | :--- | :--- |
| Address | $:$ | 2403D, 24th Floor, Coast Huanqing Building, No.24 Futian Road, Xu <br> Town Community, Futian Street, Futian District, Shenzhen |
| Manufacturer | $:$ | Shenzhen Hysiry Technology Co., Ltd. |
| Address | $:$ | 2403D, 24th Floor, Coast Huanqing Building, No.24 Futian Road, Xu <br> Town Community, Futian Street, Futian District, Shenzhen |

## 2. General Description of EUT

| EUT Name | $:$ | Smart bulb |  |
| :--- | :--- | :--- | :--- |
| Models No. | $:$ | Q10CW |  |
| Model Different | $:$ | N/A |  |
| Product <br> Description |  | Operation |  |
|  |  |  |  |$\quad$| $802.11 \mathrm{~b} / \mathrm{g} / \mathrm{n}(\mathrm{HT} 20): 2412 \mathrm{MHz} \sim 2462 \mathrm{MHz}$ |
| :--- |
|  |

## MPE Calculations for WIFI

## 1. Antenna Gain:

PCB Antenna: 1.7 dBi .
2. EUT Operation Condition:

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.
3. Exposure Evaluation:

Equation from page 18 of OET Bulletin 65, Edition 97-01
$S=(P G) / 4 \pi R^{2}$
Where
S: power density
P: power input to the antenna
G: power gain of the antenna in the direction of interest relative to an isotropic radiator.
$\mathbf{R}$ : distance to the center of radiation of the antenna
4. Test Result:

| Mode | Conducted <br> Power(max) <br> $(\mathrm{dBm})$ | Turn-up <br> Power <br> $(\mathrm{dB})$ | Max tune up <br> power <br> $(\mathrm{dBm})$ <br> $[\mathrm{P}]$ | ANT Gain <br> $(\mathrm{dBi})$ <br> $[\mathrm{G}]$ | Distance <br> $(\mathrm{cm})$ <br> $[\mathrm{R}]$ | Power <br> Density <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ <br> $[\mathrm{S}]$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 802.11 b | 1.697 | $2 \pm 1$ | 3 | 1.7 | 20 | 0.00058 |
| 802.11 g | 0.968 | $1 \pm 1$ | 2 | 1.7 | 20 | 0.00047 |
| 802.11 n <br> $(H T 20)$ | 0.888 | $1 \pm 1$ | 2 | 1.7 | 20 | 0.00047 |

5. Conclusion:

As specified in Table 1B of 47 CFR 1.1310- Limits for Maximum Permissible Exposure (MPE),
Limits for General Population/ Uncontrolled Exposure

| Frequency Range <br> $(\mathrm{MHz})$ | Power density <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ |
| :---: | :---: |
| $300-1,500$ | $\mathrm{~F} / 1500$ |
| $1,500-100,000$ | 1.0 |

For 802.11b/g/n:2412~2462 MHz
MPE limit $\mathrm{S}: 1 \mathrm{~mW} / \mathrm{cm}^{2}$
The MPE is calculated as $0.00058 \mathrm{~mW} / \mathrm{cm}^{2}<$ limit $1 \mathrm{~mW} / \mathrm{cm}^{2}$. So, RF exposure limit warning or SAR test are not required.

The EUT will only be used with a separation of 20 cm or greater between the antenna and nearby persons and can therefore be considered a mobile transmitter per 47 CFR2.1091
(b).

The RF Exposure Information page from the manual is included here for reference.

## Note

For a more detailed features description, please refer to the RF Test Report.
