**Maximum Permissible Exposure to RF (MPE) CFR 15.247 (i), CFR 1.1310 (e)**

The maximum exposure level to the public from the RF power of the EUT shall not exceed a power density, **S** as per the respective limits in Table 1 below, at a distance, **d**, of 20 cm (Mobile condition) from the EUT.

**Table 1. Limits for Maximum Permissible Exposure (MPE)**

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm <sup>2</sup> )	Averaging time (minutes)
<b>Limits for General Population/Uncontrolled Exposure</b>				
0.3-1.34	614	1.63	*100	30
1.34-30	824/f	2.19/f	*180/f <sup>2</sup>	30
30-300	27.5	0.073	0.2	30
300-1,500			f/1500	30
1,500-100,000			1.0	30

f = frequency in MHz \* = Plane-wave equivalent power density

**MPE for 2400 MHz – 2483.5 MHz for the Cognosos, Inc RB-300 radio device:**

Limit: 1.0 mW/cm<sup>2</sup>  
 Peak Power (dBm) = 2.28 dBm  
 Peak Power (Watts) = 0.017 W  
 Gain of Transmit Antenna = 3.3 dB<sub>i</sub> = 2.14 numeric

d = Distance = 20 cm = 0.2 m

$$\begin{aligned}
 S &= (PG/4\pi d^2) = \text{EIRP}/4A = 0.017(2.14)/4*\pi*0.2*0.2 \\
 &= 0.0364/0.5030 = 0.0724 \text{ W/m}^2 \\
 &= (0.0724 \text{ W/m}^2) (1\text{m}^2/\text{W}) (0.1 \text{ mW/cm}^2) \\
 &= 0.00724 \text{ mW/cm}^2
 \end{aligned}$$

which is << less than S = 1.0 mW/cm<sup>2</sup>

RB-300

---

**RSS-102, 2.5.2 compliance for 2400 MHz – 2483.5 MHz for the Cognosos, Inc  
RB-300 radio device:**

At or above 300 MHz and below 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than  $1.31 \times 10^{-2} f^{0.6834}$  W (adjusted for tune-up tolerance), where  $f$  is in MHz;

In this case  $f = 2440$  MHz

$$1.31 * 10^{-2} * 2440^{0.6834} = 2.7 \text{ W}$$

$$\text{EUT max EIRP} = 2.28 \text{ dBm} + (3.3 \text{ dBi}) = 5.6 \text{ dBm EIRP} = 0.036 \text{ W}$$

Which is << than 2.7 W
