

FCC Test Report

Report No.: RWAY202300069C

Applicant: Cognosos, Inc.

Address: 1100 Spring St. NW, Suite 300A, Atlanta Georgia 30309 United

States

Product Name: Digital Broadcasting Device

Product Model: RB301

Multiple Models: N/A

Trade Mark: Cognosos

FCC ID: 2AKFQRB301

Standards: FCC CFR Title 47 Part 15C (§15.247)

Test Date: 2023/11/07-2023/11/29

Test Result: Complied

Report Date: 2024/01/29

Announcement

- 1. This test report shall not be reproduced except in full, without the written approval of World Alliance Testing & Certification (Shenzhen) Co., Ltd
- 2. The results in this report apply only to the sample tested.
- 3. This sample tested is in compliance with the limits of the above regulation.
- 4. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the U.S. Government.
- 5. The information marked "#" is provided by the applicant, the laboratory is not responsible for its authenticity and this information can affect the validity of the result in the test report. Customer model name, addresses, names, trademarks etc. are included.

1 General Information

1.1 Client Information

| Applicant: | Cognosos, Inc. |
|---------------|--|
| Address: | 1100 Spring St. NW, Suite 300A Atlanta GA 30309 United States Of America (Excluding The States Of Alaska |
| Manufacturer: | Shenzhen Minew Technologies Co., Ltd. |
| Address: | Building 3, Instrument World Industrial Park, No. 306, GuanlanGuiyue Road, Longhua District, Shenzhen |

1.2 Product Description of EUT

The EUT is Digital Broadcasting Device that contains BLE radio, this report covers the full testing of the BLE radio.

| Sample Serial Number | 33-2for CE&RE test, 33-1 for RF test conducted test (assigned by WATC) |
|--|--|
| Sample Received Date | 2023-11-10 |
| Sample Status | Good Condition |
| Frequency Range | 2402MHz - 2480MHz(BLE1M/2M) |
| Maximum Conducted Peak Output Power | 4.23dBm |
| Modulation Technology | GFSK |
| Spatial Streams | SISO (1TX, 1RX) |
| Antenna Gain# | -0.62dBi |
| Power Supply | DC 3.0V from battery |
| Adapter Information | N/A |
| Modification | Sample No Modification by the test lab |

1.3 Antenna information

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

Device Antenna information:

The BLE antenna is an internal antenna which cannot replace by end-user, please see product internal photos for details.

1.5 Measurement Uncertainty

| Para | meter | Expanded Uncertainty (Confidence of 95%(U = 2Uc(y))) | |
|------------------------|----------------|--|--|
| AC Power Lines Condu | cted Emissions | ±3.14dB | |
| | Below 30MHz | ±2.78dB | |
| Emissions, Radiated | Below 1GHz | ±4.84dB | |
| | Above 1GHz | ±5.44dB | |
| Emissions, Conducted | | 1.75dB | |
| Conducted Power | | 0.74dB | |
| Frequency Error | | 150Hz | |
| Bandwidth | | 0.34% | |
| Power Spectral Density | | 0.74dB | |

Note: The extended uncertainty given in this report is obtained by combining the standard uncertainty times the coverage factor K with the 95% confidence interval. Otherwise required by the applicant or Product Regulations, Decision Rule in this report did not consider the uncertainty.

1.6 Laboratory Location

World Alliance Testing & Certification (Shenzhen) Co., Ltd

No. 1002, East Block, Laobing Building, Xingye Road 3012, Xixiang street, Bao'an District, Shenzhen, Guangdong, People's Republic of China

Tel: +86-755-29691511, Email: qa@watc.com.cn

The lab has been recognized as the FCC accredited lab under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database, FCC Registration No. : 463912, the FCC Designation No. : CN5040.

The lab has been recognized by Innovation, Science and Economic Development Canada to test to Canadian radio equipment requirements, the CAB identifier: CN0160.

1.7 Test Methodology

FCC CFR 47 Part 2

FCC CFR 47 Part 15

KDB 558074 D01 DTS Meas Guidance v05r02

ANSI C63.10-2013

Report Template: TR-4-E-008/V1 Page 5 of 30

2 Description of Measurement

2.1 Test Configuration

| Operating channels: | | | | | | | |
|---------------------|--------------------|-------------|--------------------|-------------|--------------------|--|--|
| Channel No. | Frequency (MHz) | Channel No. | Frequency (MHz) | Channel No. | Frequency (MHz) | | |
| 0 | 2402 | 19 | 2440 | 38 | 2478 | | |
| 1 | 2404 | 20 | 2442 | 39 | 2480 | | |
| | | | | / | / | | |
| 18 | 2438 | | | / | / | | |

According to ANSI C63.10-2013 chapter 5.6.1 Table 11 requirement, select lowest channel, middle channel, and highest channel in the frequency range in which device operates for testing. The detailed frequency points are as follows:

| Lowest channel | | Middle channel | | Highest channel | |
|-----------------------------|------|-----------------------------|------|-----------------|--------------------|
| Channel No. Frequency (MHz) | | Channel No. Frequency (MHz) | | Channel No. | Frequency (MHz) |
| 0 | 2402 | 19 | 2440 | 39 | 2480 |

| Test Mode: | | | | | | |
|--|---|-------------|---------------------------------|--------------|--|--|
| Transmitting mode: | nitting mode: Keep the EUT in continuous transmitting with modulation | | | | | |
| Exercise software#: | Exercise software [#] : Engineering model | | | | | |
| | | P | ower Level Setting [#] | | | |
| Mode | Data rate | Low Channel | Middle Channel | High Channel | | |
| BLE 1M | 1Mbps | 3 | 3 | 3 | | |
| BLE 2M | 2Mbps | 3 3 3 | | | | |
| The exercise software and the maximum power setting that provided by manufacturer. | | | | | | |

Worst-Case Configuration:

For radiated emissions, EUT was investigated in three orthogonal orientation, the worst-case orientation was recorded in report

For radiated emission 9kHz-1GHz and above 18GHz were performed with the EUT transmits at the channel with highest output power as worst-case scenario.

2.2 Test Auxiliary Equipment

| Manufacturer Description | | Model | Serial Number |
|--------------------------|---|-------|---------------|
| 1 | 1 | 1 | / |

Report Template: TR-4-E-008/V1 Page 6 of 30

2.3 Test Setup

1) Conducted emission measurement:

Note: The 0.8 m distance specified between EUT/AE/PSU and AMN/AAN, is applicable only to the EUT being measured. If the device is AE then it shall be >0.8 m.

2) Radiated emission measurement:

Below 30MHz (3m SAC)

2.4 Test Procedure

Conducted emission:

- 1. The E.U.T is placed on a non-conducting table 40cm from the vertical ground plane and 80cm above the horizontal ground plane (Please refer to the block diagram of the test setup and photographs).
- Both sides of A.C. line are checked for maximum conducted interference. In order to find the
 maximum emission, the relative positions of equipment and all of the interface cables must be
 changed according to ANSI C63.10 on conducted measurement.
- 3. Line conducted data is recorded for both Line and Neutral

Radiated Emission Procedure:

a) For below 30MHz

- 1. All measurements were made at a test distance of 3 m. The measured data was extrapolated from the test distance (3m) to the specification distance (300 m from 9-490 kHz and 30 m from 490 kHz- 30 MHz) to clearly show the relative levels of fundamental and spurious emissions and demonstrate compliance with the requirement that the level of any spurious emissions be below the level of the intentionally transmitted signal. The extrapolation factor for the limits were 40*Log (test distance / specification distance).
- 2. Loop antenna use, investigation was done on the three antenna orientations (parallel, perpendicular, gound-parallel)

b) For 30MHz-1GHz:

- 1. The EUT was placed on the tabletop of a rotating table 0.8 m the ground at a 3 m semi anechoic chamber. The measurement distance from the EUT to the receiving antenna is 3 m.
- 2. EUT works in each mode of operation that needs to be tested. The highest signal levels relative to the limit shall be determined by rotating the EUT from 0° to 360° and with varying the measurement antenna height between 1 m and 4 m in vertical and horizontal polarizations.

c) For above 1GHz:

- 1. The EUT was placed on the tabletop of a rotating table 1.5 m the ground at a 3 m fully anechoic room. The measurement distance from the EUT to the receiving antenna is 3 m (1-18GHz) and 1.5 m (above 18GHz).
- 2. EUT works in each mode of operation that needs to be tested, and having the EUT continuously working. The highest signal levels relative to the limit shall be determined by rotating the EUT from 0° to 360° and with varying the measurement antenna height between 1 m and 4 m in vertical and horizontal polarizations.
- 3. Open the test software to control the test antenna and test turntable. Perform the test, save the test results, and export the test data.
- 4. Base on FCC 15.31 (f) (2): measurements may be performed at a distance closer than that specified in the regulations; however, an attempt should be made to avoid making measurements in the near field.

RF Conducted Test:

1. The antenna port of EUT was connected to the RF port of the test equipment (Power Meter or

Report Template: TR-4-E-008/V1 Page 9 of 30

Spectrum analyzer) through Attenuator and RF cable.

- 2. The cable assembly insertion loss of 11.5dB (including 10.0dB Attenuator and 1.5dB cable) was entered as an offset in the power meter. Note: Actual cable loss was unavailable at the time of testing, therefore a loss of 1.5dB was assumed as worst case. This was later verified to be true by laboratory. (if the RF cable provided by client, the cable loss declared by client)
- 3. The EUT is keeping in continuous transmission mode and tested in all modulation modes.

2.5 Measurement Method

| Description of Test | Measurement Method | |
|---|--|--|
| AC Line Conducted Emissions | ANSI C63.10-2013 Section 6.2 | |
| Maximum Conducted Output Power | ANSI C63.10-2013 Section 11.9.1.1 | |
| Power Spectral Density | ANSI C63.10-2013 Section 11.10.2 | |

3 Test Results

3.1 Test Summary

| FCC Rules | Description of Test | Result |
|------------------------------|---|----------------|
| §15.203 | Antenna Requirement | Compliance |
| §15.207 (a) | AC Line Conducted Emissions | Not Applicable |
| §15.247(b)(3) | Maximum Conducted Output Power | Compliance |
| §15.247(e) | Power Spectral Density | Compliance |
| §15.247 (a)(2) | 6 dB Emission Bandwidth | Compliance |
| - | 99% Occupied Bandwidth | Report only |
| §15.247(d) | 100kHz Bandwidth of Frequency Band Edge | Compliance |
| §15.205, §15.209, §15.247(d) | Radiated emission | Compliance |
| - | Duty Cycle | Report only |

3.2 Limit

| Test items | Limit |
|---|--|
| AC Line Conducted Emissions | See details §15.207 (a) |
| Conducted Output Power | For systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt. |
| 6dB Emission Bandwidth | The minimum 6 dB bandwidth shall be at least 500 kHz. |
| Power Spectral Density | For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission. |
| Spurious Emissions, 100kHz Bandwidth of Frequency Band Edge | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.205(c)). |

3.3 AC Line Conducted Emissions Test Data

Not Applicable, the device only powered by battery.

3.4 Radiated emission Test Data

9 kHz-30MHz:

| | | | | | | | | | |

Remark:

Corrected Amplitude= Reading level + corrected Factor

Corrected Factor = Antenna factor + Cable loss - Amplifier gain

Margin = Corrected Amplitude - Limit

For the test result of Peak below the Peak limit more than 20dB, which can compliance with the average limit, just the Peak level was recorded.

The emission levels of other frequencies that were lower than the limit 20dB, not show in test report.

For emissions in 18GHz-25GHz range, all emissions were investigated and in the noise floor level.

Test plot for example as below:

Project No. : RWAY202300069
Test Mode : Transmitting
Test Voltage : Power By Battery

Environment : 24.6℃/45%R.H./101.4kPa

Tested by : Bard Huang Polarization : horizontal

Remark : BLE 1M high channel

| No. | Frequency (MHz) | Reading (dBμV) | Factor (dB/m) | Result (dBµV/m) | Limit (dBµV/m) | Over Limit (dB) | Detector |
|-----|--------------------|-------------------|------------------|--------------------|-------------------|--------------------|----------|
| 1 | 4804.000 | 48.95 | 0.21 | 49.16 | 54.00 | -4.84 | Average |
| 2 | 4804.000 | 53.32 | 0.21 | 53.53 | 74.00 | -20.47 | Peak |
| 3 | 15601.800 | 36.25 | 8.09 | 44.34 | 54.00 | -9.66 | Average |
| 4 | 15601.800 | 49.09 | 8.09 | 57.18 | 74.00 | -16.82 | Peak |

Remarks: Factor = Antenna factor + Cable loss - Preamp gain

2480MHz
