1. RF Exposure Requirements

1.1 General Information

Client Information

Antenna Gain:

Applicant:	Controlid Industria e Comercio de Hardware e Servicos De Tecnologia Ltda
Address of applicant:	Rua Hungria 888, 8th floor, São Paulo 01455-000, Brazil
Manufacturer:	Controlid Industria e Comercio de Hardware e Servicos De Tecnologia Ltda
Address of manufacturer:	Rua Hungria 888, 8th floor, São Paulo 01455-000, Brazil
General Description of EUT:	
Product Name:	iDUHF
Trade Name:	1
Model No.:	IDUHF LITE
Adding Model(s):	1
Rated Voltage:	DC12V
Battery Capacity:	1
FCC ID:	2AKJ4-IDUHFLITE
Equipment Type:	Mobile device
Technical Characteristics of EUT:	
Frequency Range:	902.25-927.75MHz
RF Output Power:	25.10dBm (Conducted)
Modulation:	FHSS
Quantity of Channels:	52
Channel Separation:	500kHz

Type of Antenna: **External Antenna** 8.06dBi

1.2 RF Exposure Exemption

According to §1.1307(b)(3) and KDB 447498 D04 Interim General RF Exposure Guidance v01, system operating under the provisions of this section shall be operating in a manner that the public is not exposed to radio frequency energy level in excess limit for maximum permissible exposure.

Option A: FCC Rule Part 1.1307 (b)(3)(i)(A):The available maximum time-averaged power is no more than 1mW, regardless of separation distance.

Option B: FCC Rule Part 1.1307 (b)(3)(i)(B): The available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold P_{th} (mW) described in the following formula. P_{th} is given by:

$$P_{th} (mW) = \begin{cases} ERP_{20 \ cm} (d/20 \ cm)^x & d \le 20 \ cm \\ ERP_{20 \ cm} & 20 \ cm < d \le 40 \ cm \end{cases}$$

 $x = -\log_{10}\left(\frac{60}{ERP_{20\ cm}\sqrt{f}}\right) \text{ and } f \text{ is in GHz;}$

Where

and

$$(2040f \quad 0.3 \text{ GHz} \le f < 1.5 \text{ GHz})$$

 $ERP_{20\ cm}\ (mW) = \begin{cases} \\ 3060 & 1.5\ GHz \le f \le 6\ GHz \end{cases}$

d = the separation distance (cm);

Option C: FCC Rule Part 1.1307 (b)(3)(i)(C): The minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. R must be at least $\lambda/2\pi$, where λ is the free-space operating wavelength in meters.

Single RF Sources Subject to Routine Environmental Evaluation					
RF Source frequency (MHz)	Threshold ERP (watts)				
0.3-1.34	1,920 R ²				
1.34-30	3,450 R ² /f ²				
30-300	3.83 R ²				
300-1,500	0.0128 R ² f				
1,500-100,000	19.2R ²				

For Multiple RF sources: FCC Rule Part 1.1307(b)(3)(ii):

- (A) The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required).
- (B) In the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^{a} \frac{P_i}{P_{th,i}} + \sum_{j=1}^{b} \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

1.3 Calculated Result

Radio Access	Prediction Frequency	Output Power	Antenna Gain	Duty Cycle	Tune-Up Time-Averaged Power	ERP	
Technology	(MHz)	(dBm)	(dBi)	(%)	(dBm)	(dBm)	
SRD	902.25	25.10	8.06	100	26.00	31.91	

Frequency	Option	Min. Distance	Max. Power		Exposure Limit	Ratio	Result
(MHz)		(cm)	(dBm)	(mW)	(mW)	Ralio	Pass/Fail
902.25	В	20	31.91	1552.39	1840.59	0.84	Pass

Note: 1. Time-Averaged Power=Output Power * Duty Cycle; ERP= Time-Averaged Power+ Antenna gain-2.15dB

2. Option A, B and C refers as clause 1.2.

3. For option B, Max (time-averaged power, effective radiated power (ERP)) converts to Max. Power. For option C, ERP converts to Max. Power;

4. For option B, P_{th} (mW) converts to Exposure Limit (mW); For option C, ERP (W) converts to Exposure Limit (mW).

5. Ratio= Tune-Up ERP (mW)/ Exposure Limit (mW)

Result: Pass
