## **FCC TEST REPORT**

For

Shenzhen Kean Digital Co., Ltd.

## NETWORK VIDEO RECORDER

Test Model: N44WEC

Additional Model No.: Please refer to page 6

Prepared for : Shenzhen Kean Digital Co., Ltd.

Address : Rujun Building, Floor 4, No.105, the Center Road, Bantian

Street, Longgang Zone, Shenzhen, China

Prepared by : Shenzhen LCS Compliance Testing Laboratory Ltd.

Address : 1/F., Xingyuan Industrial Park, Tongda Road, Bao'an Avenue, Bao'an

District, Shenzhen, Guangdong, China

Tel : (+86)755-82591330 Fax : (+86)755-82591332 Web : www.LCS-cert.com

Mail : webmaster@LCS-cert.com

Date of receipt of test sample : September 11, 2017

Number of tested samples : 1

Serial number : Prototype

Date of Test : September 11, 2017~November 03, 2017

Date of Report : November 03, 2017

## **FCC TEST REPORT** FCC CFR 47 PART 15 C(15.247): 2016

Report Reference No. .....: : LCS170911108AE1

Date of Issue ..... : November 03, 2017

Testing Laboratory Name.....: Shenzhen LCS Compliance Testing Laboratory Ltd.

Address ...... : 1/F., Xingyuan Industrial Park, Tongda Road, Bao'an Avenue,

Bao'an District, Shenzhen, Guangdong, China

Testing Location/ Procedure ......: Full application of Harmonised standards ■

Partial application of Harmonised standards

Other standard testing method

Applicant's Name .....: Shenzhen Kean Digital Co., Ltd.

Address ...... : Rujun Building, Floor 4, No.105, the Center Road, Bantian

Street, Longgang Zone, Shenzhen, China

**Test Specification** 

Standard.....: FCC CFR 47 PART 15 C(15.247): 2016

Test Report Form No. .....: LCSEMC-1.0

TRF Originator.....: Shenzhen LCS Compliance Testing Laboratory Ltd.

Master TRF ..... : Dated 2011-03

## 1. GENERAL INFORMATION

## 1.1. Description of Device (EUT)

**EUT** : NETWORK VIDEO RECORDER

Additional Model No. : N24WDD, N24WDE, N24WDL, N24WDM, N24WDN, N24WDP,

> N24WDQ, N24WDR, N28WEF, N28WEG, N28WEH, N28WEJ, N28WEK, N28WEL, N28WEM, N28WEN, N34WDD, N34WDE, N34WDF, N34WDG, N34WDH, N34WDJ, N34WDK, N34WDL, N34WDM, N34WDN, N38WEE, N38WEF, N44WED, N44WEE, N44WEF, N44WEG, N44WEH, N44WEJ, N44WEK, N44WEL, N44WEM, N44WEN, N44WEP, N44WEQ, N44WER, N44WES, N44WET, N44WEU, N44WEV, N44WEW, N44WEX, N44WEY, N44WEZ, N44WDP, N44WDQ, N44WDR, N44WDS, N44WDT, N44WDU, N44WDV, N44WDW, N44WDX, N44WDY, N44WDZ, N44WBB, N48WHE, N48WHF, N48WHG, N48WHH, N48WHJ, N48WHK, N48WHL, N48WHM, N48WHN, N48WHP, N48WHQ,

N48WHR, N48WHS, N48WHT, N48WHU, N48WHV, N48WHW,

N48WHX, N48WHY, N48WHZ

Model Declaration : PCB board, structure and internal of these model(s) are the same,

Only models name is different for these models.

Test Model : N44WEC

**Power Supply** : INPUT: 100-240V~, 50/60Hz, 1.5A Max.

OUTPUT: 12Vdc, 2A

: 2.1.0 Hardware version

Software version : 2.7.2.9 223222

WLAN : Supported 802.11b/802.11g/802.11n

WLAN FCC Operation : IEEE 802.11b:2412-2462MHz IEEE 802.11g:2412-2462MHz Frequency

IEEE 802.11n HT20:2412-2462MHz

WLAN Channel Number : 11 Channels for WIFI 20MHz Bandwidth(802.11b/g/n-HT20)

WLAN Modulation Technology IEEE 802.11b: DSSS(CCK,DQPSK,DBPSK)

> IEEE 802.11g: OFDM(64QAM, 16QAM, QPSK, BPSK) IEEE 802.11n: OFDM (64QAM, 16QAM,QPSK,BPSK)

Antenna Type And Gain : External Antenna 0, 0.0dBi(Max.)

External Antenna 1, 0.0dBi(Max.)

## 1.2. Host System Configuration List and Details

| Manufacturer            | Description             | Model      | Serial<br>Number | Certificate |
|-------------------------|-------------------------|------------|------------------|-------------|
| C.SA Electrical Factory | AC/DC Charger<br>of EUT | CS-1202000 |                  | FCC         |

SHENZHEN LCS COMPLIANCE TESTING LABORATORY LTD. FCC ID:2AKL2-N44WEC Report No.: LCS170911108AE1

## 1.3. External I/O Cable

| I/O Port Description | Quantity | Cable |
|----------------------|----------|-------|
| Interface charge     | 1        | 0.8m  |
| HDMI                 | 1        | N/A   |
| USB                  | 1        | N/A   |
| LAN                  | 1        | N/A   |

## 1.4. Description of Test Facility

CNAS Registration Number. is L4595. FCC Registration Number. is 254912.

Industry Canada Registration Number. is 9642A-1.

ESMD Registration Number. is ARCB0108. UL Registration Number. is 100571-492. TUV SUD Registration Number. is SCN1081.

TUV RH Registration Number. is UA 50296516-001

NVLAP Registration Code is 600167-0

The 3m-Semi anechoic test site fulfils CISPR 16-1-4 according to ANSI C63.10 and CISPR 16-1-4:2010 SVSWR requirement for radiated emission above 1GHz.

### 1.5. Statement of the Measurement Uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. To CISPR 16 – 4 "Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements" and is documented in the LCS quality system acc. To DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

### 1.6. Measurement Uncertainty

| Test Item              |   | Frequency Range | Uncertainty | Note |
|------------------------|---|-----------------|-------------|------|
| Radiation Uncertainty  |   | 9KHz~30MHz      | ±3.10dB     | (1)  |
|                        |   | 30MHz~200MHz    | ±2.96dB     | (1)  |
|                        |   | 200MHz~1000MHz  | ±3.10dB     | (1)  |
|                        |   | 1GHz~26.5GHz    | ±3.80dB     | (1)  |
|                        |   | 26.5GHz~40GHz   | ±3.90dB     | (1)  |
| Conduction Uncertainty | : | 150kHz~30MHz    | ±1.63dB     | (1)  |
| Power disturbance      | : | 30MHz~300MHz    | ±1.60dB     | (1)  |

(1). This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

## 1.7. Description of Test Modes

The EUT has been tested under operating condition.

This test was performed with EUT in X, Y, Z position and the worse case was found when EUT in X position.

Worst-case mode and channel used for 150kHz-30 MHz power line conducted emissions was the mode and channel with the highest output power, that was determined to be 802.11b mode(High Channel). Worst-case mode and channel used for 9kHz-1000 MHz radiated emissions was the mode and channel with the highest output power, that was determined to be 802.11b mode(High Channel).

Worst-Case data rates were utilized from preliminary testing of the Chipset, worst-case data rates used during the testing are as follows:

802.11b Mode: 1 Mbps, DSSS. 802.11g Mode: 6 Mbps, OFDM. 802.11n Mode HT20: MCS0, OFDM.

Channel List & Frequency

#### 802.11b/g/n(HT20)

| Frequency Band | Channel No. | Frequency(MHz) | Channel No. | Frequency(MHz) |
|----------------|-------------|----------------|-------------|----------------|
|                | 1           | 2412           | 7           | 2442           |
|                | 2           | 2417           | 8           | 2447           |
| 2412~2462MHz   | 3           | 2422           | 9           | 2452           |
| 2412~2402IVITZ | 4           | 2427           | 10          | 2457           |
|                | 5           | 2432           | 11          | 2462           |
|                | 6           | 2437           |             |                |

### 2. TEST METHODOLOGY

All measurements contained in this report were conducted with ANSI C63.10-2013, American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices.

The radiated testing was performed at an antenna-to-EUT distance of 3 meters. All radiated and conducted emissions measurement was performed at Shenzhen LCS Compliance Testing Laboratory Ltd..

## 2.1. EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner that intends to maximize its emission characteristics in a continuous normal application.

#### 2.2. EUT Exercise

The EUT was operated in the engineering mode to fix the TX frequency that was for the purpose of the measurements.

According to FCC's request, Test Procedure KDB558074 D01 DTS Meas. Guidance v04 are required to be used for this kind of FCC 15.247 digital modulation device.

According to its specifications, the EUT must comply with the requirements of the Section 15.203, 15.205, 15.207, 15.209 and 15.247 under the FCC Rules Part 15 Subpart C.

#### 2.3. General Test Procedures

#### 2.3.1 Conducted Emissions

The EUT is placed on the turntable, which is 0.8 m above ground plane. According to the requirements in Section 6.2.1 of ANSI C63.10-2013 Conducted emissions from the EUT measured in the frequency range between 0.15 MHz and 30MHz using Quasi-peak and average detector modes.

#### 2.3.2 Radiated Emissions

The EUT is placed on a turn table, which is 0.8 m above ground plane. The turntable shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3m away from the receiving antenna, which varied from 1m to 4m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the maximum emissions, exploratory radiated emission measurements were made according to the requirements in Section 6.3 of ANSI C63.10-2013

## 3. SYSTEM TEST CONFIGURATION

#### 3.1. Justification

The system was configured for testing in a continuous transmits condition.

### 3.2. EUT Exercise Software

The system was configured for testing in a continuous transmits condition and change test channels by software (Telnet 192.168.168.168) provided by application.

## 3.3. Special Accessories

| No. | Equipment     | Manufacturer | Model No. | Serial No. | Length | shielded/<br>unshielded | Notes |
|-----|---------------|--------------|-----------|------------|--------|-------------------------|-------|
| 1   | PC            | Lenovo       | Ideapad   | A131101550 | /      | /                       | DOC   |
| 2   | Power adapter | Lenovo       | CPA-A090  | 36200414   | 1.00m  | unshielded              | DOC   |

## 3.4. Block Diagram/Schematics

Please refer to the related document

### 3.5. Equipment Modifications

Shenzhen LCS Compliance Testing Laboratory Ltd. has not done any modification on the EUT.

## 3.6. Test Setup

Please refer to the test setup photo.

## 4. SUMMARY OF TEST RESULTS

| Applied Standard: FCC Part 15 Subpart C |   |           |  |  |  |  |
|---|---|-----------|--|--|--|--|
| FCC Rules                               | FCC Rules Description of Test             |           |  |  |  |  |
| §15.247(b)                              | Maximum Conducted Output Power            | Compliant |  |  |  |  |
| §15.247(e)                              | Power Spectral Density                    | Compliant |  |  |  |  |
| §15.247(a)(2)                           | 6dB Bandwidth                             | Compliant |  |  |  |  |
| §15.247(a)                              | Occupied Bandwidth                        | Compliant |  |  |  |  |
| §15.209, §15.247(d)                     | Radiated and Conducted Spurious Emissions | Compliant |  |  |  |  |
| §15.205                                 | Emissions at Restricted Band              | Compliant |  |  |  |  |
| §15.207(a)                              | Conducted Emissions                       | Compliant |  |  |  |  |
| §15.203                                 | Antenna Requirements                      | Compliant |  |  |  |  |
| §15.247(i)§2.1093                       | RF Exposure                               | Compliant |  |  |  |  |

## 5. TEST RESULT

## 5.1. On Time and Duty Cycle

### 5.1.1. Standard Applicable

None; for reporting purpose only.

### 5.1.2. Measuring Instruments and Setting

Please refer to section 6 of equipments list in this report. The following table is the setting of the spectrum analyser.

#### 5.1.3. Test Procedures

- 1. Set the centre frequency of the spectrum analyser to the transmitting frequency;
- 2. Set the span=0MHz, RBW=8MHz, VBW=50MHz, Sweep time=5ms;
- 3. Detector = peak;
- 4. Trace mode = Single hold.

### 5.1.4. Test Setup Layout

### 5.1.5. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

### 5.1.6. Test result

|         | On Time | Period | Duty Cycle | Duty  | Duty Cycle  | 1/B      |
|---------|---------|--------|------------|-------|-------------|----------|
| Mode    | В       |        | x          | Cycle | Correction  | Minimum  |
|         | (ms)    | (ms)   | (Linear)   | (%)   | Factor (dB) | VBW(KHz) |
| 802.11b | 5       | 5      | 1          | 100   | 0           | 0.010    |
| 802.11g | 5       | 5      | 1          | 100   | 0           | 0.010    |
| 802.11n | 5       | 5      | 1          | 100   | 0           | 0.010    |
| -HT20   | 3       | ,      | ı          | 100   |             | 0.010    |

### 5.2. Maximum Conducted Output Power Measurement

#### 5.2.1. Standard Applicable

According to §15.247(b): For systems using digital modulation in the 2400-2483.5 MHz and 5725-5850 MHz band, the limit for maximum peak conducted output power is 30dBm. The limited has to be reduced by the amount in dB that the gain of the antenna exceed 6dBi. In case of point-to-point operation, the limit has to be reduced by 1dB for every 3dB that the directional gain of the antenna exceeds 6dBi.

Systems operating in the 5725-5850 MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi without any corresponding reduction in transmitter peak output power.

#### 5.2.2. Measuring Instruments and Setting

Please refer to section 6 of equipments list in this report. The following table is the setting of the power meter.

#### 5.2.3. Test Procedures

The transmitter output (antenna port) was connected to the power meter.

#### 5.2.4. Test Setup Layout

#### 5.2.5. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

## 5.2.6. Test Result of Maximum Conducted Output Power

| Temperature   | 25.1℃       | Humidity       | 52.4%       |

#### Remark:

- 1. Measured output power at difference data rate for each mode and recorded worst case for each mode.
- 2. Test results including cable loss; Worst case data at 1Mbps at IEEE 802.11b; 6Mbps at IEEE 802.11g; 6.5Mbps at IEEE 802.11n HT20;

### 5.3. Power Spectral Density Measurement

#### 5.3.1. Standard Applicable

According to §15.247(e): For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

#### 5.3.2. Measuring Instruments and Setting

Please refer to section 6 of equipments list in this report. The following table is the setting of Spectrum Analyzer.

#### 5.3.3. Test Procedures

- 1. The transmitter was connected directly to a Spectrum Analyzer through a directional couple.
- 2. The power was monitored at the coupler port with a Spectrum Analyzer. The power level was set to the maximum level.
- 3. Set the RBW =  $3 \text{ kHz} \sim 100 \text{ kHz}$ .
- 4. Set the VBW ≥ 3\*RBW
- 5. Set the span to 1.5 times the DTS channel bandwidth.
- 6. Detector = peak.
- 7. Sweep time = auto couple.
- 8. Trace mode = max hold.
- 9. Allow trace to fully stabilize.
- 10. Use the peak marker function to determine the maximum power level in any 3 kHz band segment within the fundamental EBW.

### 5.3.4. Test Setup Layout

### 5.3.5. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

### 5.3.6. Test Result of Power Spectral Density

## 5.4. 6 dB Spectrum Bandwidth Measurement

### 5.4.1. Standard Applicable

According to §15.247(a)(2): For digital modulation systems, the minimum 6 dB bandwidth shall be at least 500 kHz.

## 5.4.2. Measuring Instruments and Setting

Please refer to section 6 of equipments list in this report. The following table is the setting of the Spectrum Analyzer.

| <u>,                                      </u> |          |
|--|----------|
| Spectrum Parameter                             | Setting  |
| Attenuation                                    | Auto     |
| Span Frequency                                 | > RBW    |
| Detector                                       | Peak     |
| Trace  | Max Hold |
| Sweep Time                                     | 100ms    |

#### 5.4.3. Test Procedures

- 1. The transmitter output (antenna port) was connected to the spectrum analyser in peak hold mode.
- 2. The resolution bandwidth and the video bandwidth were set according to KDB558074.
- 3. Measured the spectrum width with power higher than 6dB below carrier.

### 5.4.4. Test Setup Layout

### 5.4.5. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

## 5.4.6. Test Result of 6dB Spectrum Bandwidth

#### 5.5.2. Measuring Instruments and Setting

Please refer to section 6 of equipments list in this report. The following table is the setting of spectrum analyzer and receiver.

| Spectrum Parameter                        | Setting  |
|---|--|
| Attenuation                               | Auto   |
| Start Frequency                           | 1000 MHz                                       |
| Stop Frequency                            | 10th carrier harmonic                          |
| RB / VB (Emission in restricted band)     | 1MHz / 1MHz for Peak, 1 MHz / 10Hz for Average |
| RB / VB (Emission in non-restricted band) | 1MHz / 1MHz for Peak, 1 MHz / 10Hz for Average |

| Receiver Parameter     | Setting                              |
|------------------------|--------------------------------------|
| Attenuation            | Auto                                 |
| Start ~ Stop Frequency | 9kHz~150kHz / RB 200Hz for QP/AVG    |
| Start ~ Stop Frequency | 150kHz~30MHz / RB 9kHz for QP/AVG    |
| Start ~ Stop Frequency | 30MHz~1000MHz / RB 100kHz for QP/AVG |

#### 5.5.3. Test Procedures

#### 1) Sequence of testing 9 kHz to 30 MHz

#### Setup:

- --- The equipment was set up to simulate a typical usage like described in the user manual or described by manufacturer.
- --- If the EUT is a tabletop system, a rotatable table with 0.8 m height is used.
- --- If the EUT is a floor standing device, it is placed on the ground.
- --- Auxiliary equipment and cables were positioned to simulate normal operation conditions.
- --- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- --- The measurement distance is 3 meter.
- --- The EUT was set into operation.

## **Premeasurement:**

- --- The turntable rotates from 0° to 315° using 45° steps.
- --- The antenna height is 1.5 meter.
- --- At each turntable position the analyzer sweeps with peak detection to find the maximum of all emissions

#### Final measurement:

- --- Identified emissions during the premeasurement the software maximizes by rotating the turntable position (0° to 360°) and by rotating the elevation axes (0° to 360°).
- --- The final measurement will be done in the position (turntable and elevation) causing the highest emissions with QPK detector.
- --- The final levels, frequency, measuring time, bandwidth, turntable position, correction factor, margin to the limit and limit will be recorded. Also a plot with the graph of the premeasurement and the limit will be stored.

#### 2) Sequence of testing 30 MHz to 1 GHz

#### Setup:

- --- The equipment was set up to simulate a typical usage like described in the user manual or described by manufacturer.
- --- If the EUT is a tabletop system, a table with 0.8 m height is used, which is placed on the ground plane.
- --- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- --- Auxiliary equipment and cables were positioned to simulate normal operation conditions
- --- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- --- The measurement distance is 3 meter.
- --- The EUT was set into operation.

#### **Premeasurement:**

- --- The turntable rotates from 0° to 315° using 45° steps.
- --- The antenna is polarized vertical and horizontal.
- --- The antenna height changes from 1 to 3 meter.
- --- At each turntable position, antenna polarization and height the analyzer sweeps three times in peak to find the maximum of all emissions.

#### **Final measurement:**

- --- The final measurement will be performed with minimum the six highest peaks.
- --- According to the maximum antenna and turntable positions of premeasurement the software maximize the peaks by changing turntable position ( $\pm$  45°) and antenna movement between 1 and 4 meter.
- --- The final measurement will be done with QP detector with an EMI receiver.
- --- The final levels, frequency, measuring time, bandwidth, antenna height, antenna polarization, turntable angle, correction factor, margin to the limit and limit will be recorded. Also a plot with the graph of the premeasurement with marked maximum final measurements and the limit will be stored.

#### 3) Sequence of testing 1 GHz to 18 GHz

#### Setup:

- --- The equipment was set up to simulate a typical usage like described in the user manual or described by manufacturer.
- --- If the EUT is a tabletop system, a rotatable table with 1.5 m height is used.
- --- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- --- Auxiliary equipment and cables were positioned to simulate normal operation conditions
- --- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- --- The measurement distance is 3 meter.
- --- The EUT was set into operation.

#### **Premeasurement:**

- --- The turntable rotates from 0° to 315° using 45° steps.
- --- The antenna is polarized vertical and horizontal.
- --- The antenna height scan range is 1 meter to 2.5 meter.

--- At each turntable position and antenna polarization the analyzer sweeps with peak detection to find the maximum of all emissions.

#### **Final measurement:**

- --- The final measurement will be performed with minimum the six highest peaks.
- --- According to the maximum antenna and turntable positions of premeasurement the software maximize the peaks by changing turntable position (± 45°) and antenna movement between 1 and 4 meter. This procedure is repeated for both antenna polarizations.
- --- The final measurement will be done in the position (turntable, EUT-table and antenna polarization) causing the highest emissions with Peak and Average detector.
- --- The final levels, frequency, measuring time, bandwidth, turntable position, EUT-table position, antenna polarization, correction factor, margin to the limit and limit will be recorded. Also a plot with the graph of the premeasurement with marked maximum final measurements and the limit will be stored.

### 4) Sequence of testing above 18 GHz

#### Setup:

- --- The equipment was set up to simulate a typical usage like described in the user manual or described by manufacturer.
- --- If the EUT is a tabletop system, a rotatable table with 1.5 m height is used.
- --- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- --- Auxiliary equipment and cables were positioned to simulate normal operation conditions
- --- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- --- The measurement distance is 1 meter.
- --- The EUT was set into operation.

#### **Premeasurement:**

--- The antenna is moved spherical over the EUT in different polarisations of the antenna.

#### **Final measurement:**

- --- The final measurement will be performed at the position and antenna orientation for all detected emissions that were found during the premeasurements with Peak and Average detector.
- --- The final levels, frequency, measuring time, bandwidth, correction factor, margin to the limit and limit will be recorded. Also a plot with the graph of the premeasurement and the limit will be stored.

### 5.5.4. Test Setup Layout

For radiated emissions below 30MHz

Below 30MHz

**Below 1GHz** 

Above 1GHz

Above 10 GHz shall be extrapolated to the specified distance using an extrapolation factor of 20 dB/decade form 3m to 1.5m.

Distance extrapolation factor = 20 log (specific distance [3m] / test distance [1.5m]) (dB);

Limit line = specific limits (dBuV) + distance extrapolation factor [6 dB].

### 5.5.5. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

### 5.5.6. Results of Radiated Emissions (9kHz~30MHz)

| Temperature   | 24.5℃       | Humidity       | 56.2%       |
|---------------|-------------|----------------|-------------|
| Test Engineer | Jayden Zhuo | Configurations | 802.11b/g/n |

| Freq. | Level  | Over Limit | Over Limit | Remark   |
|-------|--------|------------|------------|----------|
| (MHz) | (dBuV) | (dB)       | (dBuV)     |          |
| -     | -      | -          | -          | See Note |

#### Note:

The amplitude of spurious emissions which are attenuated by more than 20 dB below the permissible value has no need to be reported.

Distance extrapolation factor = 40 log (specific distance / test distance) (dB);

Limit line = specific limits (dBuV) + distance extrapolation factor.

#### 5.5.7. Results of Radiated Emissions (30MHz~1GHz)

| Temperature 24.5℃ |             | Humidity       | 56.2%             |  |
|-------------------|-------------|----------------|-------------------|--|

### Notes:

- 1. Measuring frequencies from 9 KHz 10<sup>th</sup> harmonic or 26.5GHz (which is less), No emission found between lowest internal used/generated frequency to 30MHz.
- 2. Radiated emissions measured in frequency range from 9k~10th harmonic or 26.5GHz (which is less) were made with an instrument using Peak detector mode.
- 3. Data of measurement within this frequency range shown "---" in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.
- 4. Worst case data at 1Mbps at IEEE 802.11b; 6Mbps at IEEE 802.11g; 6.5Mbps at IEEE 802.11n HT20;

### 5.6. Conducted Spurious Emissions and Band Edges Test

### 5.6.1. Standard Applicable

According to §15.247 (d): In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).

### 5.6.2. Measuring Instruments and Setting

Please refer to section 6 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameter                        | Setting       |
|---|---------------|
| Detector                                  | Peak          |
| Attenuation                               | Auto          |
| RB / VB (Emission in restricted band)     | 100KHz/300KHz |
| RB / VB (Emission in non-restricted band) | 100KHz/300KHz |

#### 5.6.3. Test Procedures

The transmitter output is connected to a spectrum analyzer. The resolution bandwidth is set to 100 kHz. The video bandwidth is set to 300 kHz

The spectrum from 9 kHz to 26.5GHz is investigated with the transmitter set to the lowest, middle, and highest channels.

### 5.6.4. Test Setup Layout

This test setup layout is the same as that shown in section 5.4.4.

#### 5.6.5. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

## 5.6.6. Test Results of Conducted Spurious Emissions
