Applicable Standards:	FCC CFR Title 47 Part 2 FCC CFR Title 47 Part22 FCC CFR Title 47 Part24 FCC CFR Title 47 Part27	

The above equipment has been tested by Shenzhen Tongce Testing Lab. and found compliance with the requirements set forth in the technical standards mentioned above. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

#### 4.2. Test Mode

All modes and data rates and positions were investigated. Test modes are chosen to be reported as the worst case configuration below:

	Test Mode	
Band	Radiated TCs	Conducted TCs
LTE Band 2	QPSK Link (1.4MHz / 3MHz / 5MHz / 10MHz / 15MHz / 20MHz)	16QAM Link (1.4MHz / 3MHz / 5MHz / 10MHz / 15MHz / 20MHz)
LTE Band 4	QPSK Link (1.4MHz / 3MHz / 5MHz / 10MHz / 15MHz / 20MHz)	16QAM Link (1.4MHz / 3MHz / 5MHz / 10MHz / 15MHz / 20MHz)
LTE Band 7	QPSK Link (5MHz / 10MHz / 15MHz / 20MHz)	16QAM Link (5MHz / 10MHz / 15MHz / 20MHz)

Antenna port conducted and radiated test items were performed according to KDB 971168 D01 Power Meas License Digital Systems v03 with maximum output power. Radiated measurements were performed with rotating EUT in different three orthogonal test planes to find the maximum emission.

## 4.3. Description of Support Units

CT 通测检测 TESTING CENTRE TECHNOLOGY

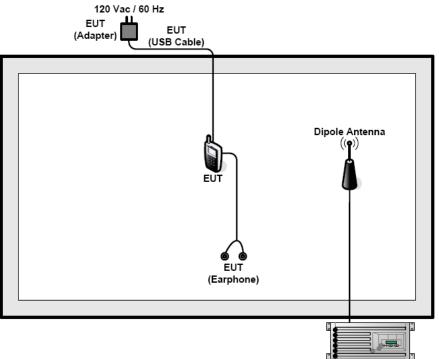

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

Equipment	Model No.	Serial No.	FCC ID	Trade Name
/	1	/	1	1

#### Note:

- 1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
- 2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.

## 4.4. Configuration of Tested System

System Simulator

## 4.5. Measurement Results Explanation Example

#### For all conducted test items:

The offset level is set in the spectrum analyzer to compensate the RF cable loss and attenuator factor between RF conducted output port and spectrum analyzer. With the offset compensation, the spectrum analyzer reading level will be exactly the RF output level. The spectrum analyzer offset is derived from RF cable loss and attenuator factor. Offset = RF cable loss + attenuator factor.

#### Report No.: TCT200907E069

## 5. Facilities and Accreditations

#### 5.1. Facilities

The test facility is recognized, certified, or accredited by the following organizations:

• FCC - Registration No.: 645098

Shenzhen Tongce Testing Lab.

The 3m Semi-anechoic chamber has been registered and fully described in a report with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files.

 IC - Registration No.: 10668A-1 The 3m Semi-anechoic chamber of Shenzhen TCT Testing Technology Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing

## 5.2. Location

Shenzhen Tongce Testing Lab.

Address: 1B/F., Building 1, Yibaolai Industrial Park, Qiaotou, Fuyong, Baoan District, Shenzhen, Guangdong, China

TEL: +86-755-27673339

## 5.3. Measurement Uncertainty

The reported uncertainty of measurement  $y \pm U$ , where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95 %.

No.	Item	MU	
1	Conducted Emission	<b>±</b> 2.56dB	
2	RF power, conducted	±0.12dB	
3	Spurious emissions, conducted	±0.11dB	
4	All emissions, radiated(<1G)	±3.92dB	
5	All emissions, radiated(>1G)	±4.28dB	
6	Temperature	±0.1°C

**FCT**通测检测 TESTING CENTRE TECHNOLOGY Report No.: TCT200907E069 Test Results and Measurement Data 6. 6.1. Effective Radiated Power and Effective Isotropic Radiated Power Measurement 6.1.1. Test Specification FCC part 27.50(c), FCC part 27.50(d) and FCC part **Test Requirement:** 27.50(h), FCC part 24.232(c), FCC part 22.913: FCC part 2.1046 Test Method: LTE Band 2: 2W LTE Band 4: 1W Limit: LTE Band 7: 2W **Test Setup:** 0.0FUT System Simulator 1. The transmitter output port was connected to the system simulator. 2. Set EUT at maximum power through system simulator. 3. Select lowest, middle, highest channels for each band and different modulation. 4. Measure and record the power level from the system simulator. 5. Calculate the ERP and EIRP The relevant equation for determining the ERP or EIRP from the conducted RF output power measured using the guidance provided above is: ERP or EIRP =  $P_{Meas} + G_T - L_C$ Test Procedure: where: ERP or EIRP = effective radiated power or equivalent isotropically radiated power, respectively (expressed in the same units as P Meas, typically dBW or dBm); P<sub>Meas</sub> = measured transmitter output power or PSD, in dBm or dBW;  $G_T$  = gain of the transmitting antenna, in dBd (ERP) or dBi (EIRP);  $L_{C}$  = signal attenuation in the connecting cable between the transmitter and antenna, in dB. Note: For personal/portable radios utilizing an integral antenna, the factor L C is typically negligible. However, in a

Page 14 of 32

Т	CT通测检测 TESTING CENTRE TECHNOLOGY	Report No.: TCT200907E069	9
		fixed station transmit system that utilizes a long cable run between the transmitter and the transmitting antenna, this factor can be significant.	
	Test Result:	PASS

# TCT 通测检测 6.4. Band Edge and Conducted Spurious Emission Measurement

.1. Test Specification	$(\mathcal{O})$			
Test Requirement:	FCC part 27.53(h), FCC FCC part 27.53(m)(4), FC	part 27.53(g) , CC part 24.238(a), 22.917(a)		
Test Method:	FCC part2.1051	S) (S)		
Limit:	-13dBm			
Гest Setup:	System Simulator	wer Divider		
Test Procedure:	<ol> <li>The testing follows FCC KDB 971168 D01v03 Set 6.0.</li> <li>The EUT was connected to the spectrum analyzer system simulator via a power divider.</li> <li>The RF output of EUT was connected to the spect analyzer by an RF cable and attenuator. The path loss was compensated to the results for each measurement.</li> <li>The band edges of low and high channels for the highest RF powers were measured.</li> <li>The conducted spurious emission for the whole frequency range was taken.</li> <li>The RF fundamental frequency should be exclude against the limit line in the operating frequency b</li> <li>The limit line is derived from 43 + 10log(P) dB bel the transmitter power P(Watts) = P(W) - [43 + 10log(P) ] (dB) = [30 + 10log(P)] (dBm) - [43 + 10log(P) ] (dB) = -13dBm For Band 17, he limit line is derived from 55 +</li> </ol>			
Test Result:	PASS

Report No.: TCT200907E069 6.6. Frequency Stability Measurement 6.6.1. Test Specification **Test Requirement:** FCC part 27.54, FCC part 22.355, 24.235 Test Method: FCC Part 2.1055 Limit: ±2.5 ppm Test Setup: m Simulate Thermal Chamber Test Procedures for Temperature Variation 1. The testing follows FCC KDB 971168 D01v03 Section 9.0. 2. The EUT was set up in the thermal chamber and connected with the system simulator. 3. With power OFF, the temperature was decreased to -30°C and the EUT was stabilized before testing. Power was applied and the maximum change in frequency was recorded within one minute. 4. With power OFF, the temperature was raised in 10°C steps up to 50°C. The EUT was stabilized at each step for at least half an hour. Power was applied and the maximum frequency change was recorded within one minute. **Test Procedure:** Test Procedures for Voltage Variation 1. The testing follows FCC KDB 971168 D01v03 Section 9.0. 2. The EUT was placed in a temperature chamber at 25±5° C and connected with the system simulator. 3. The power supply voltage to the EUT was varied from BEP to 115% of the nominal value measured at the input to the EUT. 4. The variation in frequency was measured for the worst case. 5. The worst case(worst bandwidth) for frequency stability reported in the Test Data. The worst bandwidth is as follow: 1.4M is for LTE Band 2, 1.4M is for LTE Band 4 PASS Test Result:
