| Address:              | RM1002.A.Haisong BLD.RDTairan.FuTian District Shenzhen, China   |
| Date of Test:         | July 05, 2017 – July 09, 2017   |
| Applicable Standards: | FCC CFR Title 47 Part 2 FCC CFR Title 47 Part22 FCC CFR Title 47 Part24                                 |

The above equipment has been tested by Shenzhen Tongce Testing Lab. and found compliance with the requirements set forth in the technical standards mentioned above. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

4. Genera Information

## 4.1. Test environment and mode

the EUT battery was fully-charged.

| Temperature:          | 25.0 °C   |  |  |
|-----------------------|-----------|--|--|
| Humidity:             | 56 % RH   |  |  |
| Atmospheric Pressure: | 1010 mbar |  |  |
| est Mode:             |           |  |  |
| est Mode.             |           |  |  |

The sample was placed (0.8m below 1GHz, 0.8m above 1GHz) above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

Page 6 of 43

## **Description Operation Frequency**

|          | GSM 850         | PCS1900                                 |                 |  |
|----------|-----------------|---|-----------------|--|
| Channel: | Frequency (MHz) | Channel:                                | Frequency (MHz) |  |
| 128      | 824.20          | 512                                     | 1850.20         |  |
| 129      | 824.40          | 513                                     | 1850.40         |  |
|          |                 | (.,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,, | .,              |  |
| 189      | 836.40          | 660                                     | 1879.80         |  |
| 190      | 836.60          | 661                                     | 1880.00         |  |
| 191      | 836.80          | 662                                     | 1880.20         |  |
|          |                 |   |                 |  |
| 250      | 848.60          | 809                                     | 1909.60         |  |
| 251      | 848.80          | 810                                     | 1909.80         |  |

4.2. Test Mode

Antenna port conducted and radiated test items were performed according to KDB 971168 D01 Power Meas. License Digital Systems v02r02 with maximum output power. Radiated measurements were performed with rotating EUT in different three orthogonal test planes to find the maximum emission.

Radiated emissions were investigated as following frequency range:

- 1. 30 MHz to 10000 MHz for GSM850
- 2. 30 MHz to 20000 MHz for PCS1900

All modes and data rates and positions were investigated.

Test modes are chosen to be reported as the worst case configuration below:

| Test Mode |                                |                                |  |  |
|-----------|--------------------------------|--------------------------------|--|--|
| Band      | Radiated TCs                   | Conducted TCs                  |  |  |
| GSM 850   | GSM Link<br>GPRS class 12 Link | GSM Link<br>GPRS class 12 Link |  |  |
| PCS 1900  | GSM Link<br>GPRS class 12 Link | GSM Link<br>GPRS class 12 Link |  |  |

Note: The maximum power levels are chosen to test as the worst case configuration as follows:

GPRS multi-slot class 8 mode for GMSK modulation, EDGE multi-slot class 8 mode for 8PSK modulation.

RMC 12.2Kbps mode for WCDMA band V and WCDMA band II, only these modes were used for all tests. In addition to above worst-case test, below investigating on all data rates and all modes are compliance with each FCC test case which has specific test limits. For spurious emissions at antenna port, the EUT was investigated the band edges on low and high channels, and the unwanted spurious emissions on middle channel for all modes, the results are PASS, then only the worst-results were reported in the test report. The Radiated Spurious emissions for GPRS and EDGE modes were investigated on the middle channel and the PASS results were not worst than those data tested from the highest power channels.

Report No.: TCT170705E060

## 4.3. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Equipment | Model No. | Serial No. | FCC ID | Trade Name |
|-----------|-----------|------------|--------|------------|
| 1         | 1         | 1          | 1      | I          |

#### Note:

- 1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
- 2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended

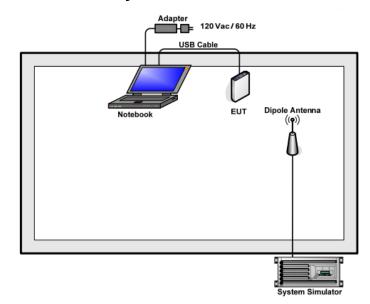

Page 9 of 43

Hotline: 400-6611-140 Tel: 86-755-27673339 Fax: 86-755-27673332 http://www.tct-lab.com

4.4. Configuration of Tested System

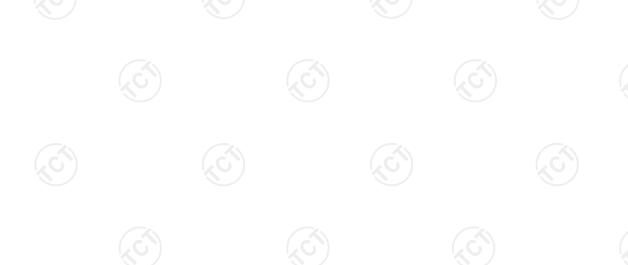

## 4.5. Measurement Results Explanation Example

#### For all conducted test items:

The offset level is set in the spectrum analyzer to compensate the RF cable loss and attenuator factor between RF conducted output port and spectrum analyzer. With the offset compensation, the spectrum analyzer reading level will be exactly the RF output level. The spectrum analyzer offset is derived from RF cable loss and attenuator factor. Offset = RF cable loss + attenuator factor.

The following shows an offset computation example with RF cable loss 3 dB and a 5dB attenuator.

Example: Offset (dB) = RF cable loss (dB) + attenuator factor (dB). = 8(dB)

Page 10 of 43

5. Facilities and Accreditations

## 5.1. Facilities

The test facility is recognized, certified, or accredited by the following organizations:

• FCC - Registration No.: 572331

Shenzhen Tongce Testing Lab

The 3m Semi-anechoic chamber has been registered and fully described in a report with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files.

IC - Registration No.: 10668A-1

The 3m Semi-anechoic chamber of Shenzhen TCT Testing Technology Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing

## 5.2. Location

Shenzhen Tongce Testing Lab

Address: 1B/F., Building 1, Yibaolai Industrial Park, Qiaotou, Fuyong, Baoan District,

Shenzhen, Guangdong, China

TEL: +86-755-27673339

## 5.3. Measurement Uncertainty

The reported uncertainty of measurement  $y \pm U$ , where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95 %.

| No. | Item                          | MU      |
|-----|-------------------------------|---------|
| 1   | Conducted Emission            | ±2.56dB |
| 2   | RF power, conducted           | ±0.12dB |
| 3   | Spurious emissions, conducted | ±0.11dB |
| 4   | All emissions, radiated(<1G)  | ±3.92dB |
| 5   | All emissions, radiated(>1G)  | ±4.28dB |
| 6   | Temperature                   | ±0.1°C  |
| 7   | Humidity                      | ±1.0%   |

Report No.: TCT170705E060

## 6. Test Results and Measurement Data

## 6.2.1. Test Specification

| Test Requirement: | FCC part 24.232(d) ; FCC part 22.913;   |  |  |  |  |
|-------------------|---|--|--|--|--|
| Test Method:      | FCC KDB 971168 v02r02 Section 5.7.1   |  |  |  |  |
| Operation mode:   | Refer to item 4.1   |  |  |  |  |
| Limit:            | The peak-to-average ratio (PAR) of the transmission may not exceed 13 dB.   |  |  |  |  |
| Test Setup:       | System Simulator  EUT  Spectrum Analyzer  |  |  |  |  |
| Test Procedure:   | <ol> <li>The testing follows FCC KDB 971168 v02r02 Section 5.7.1.</li> <li>The EUT was connected to spectrum analyzer and system simulator via a power divider.</li> <li>Set EUT to transmit at maximum output power.</li> <li>For GSM/EGPRS operating modes, signal gating is implemented on the spectrum analyzer by triggering from the system simulator.</li> <li>Set the CCDF (Complementary Cumulative Distribution Function) option of the spectrum analyzer.         Record the maximum PAPR level associated with a probability of 0.1%.     </li> </ol> |  |  |  |  |
| Test Result:      | PASS  |  |  |  |  |

## 6.2.2. Test Instruments

| Equipment                | Manufacturer | Model  | Serial Number | Calibration Due |
|--------------------------|--------------|--------|---------------|-----------------|
| System simulator         | R&S          | CMU200 | 111382        | Oct. 13, 2017   |
| Spectrum Analyzer        | Agilent      | N9020A | MY49100060    | Oct. 13, 2017   |
| RF cable<br>(9kHz-40GHz) | тст          | RE-05  | N/A           | Oct. 13, 2017   |
| Antenna Connector        | TCT          | RFC-02 | N/A           | Oct. 13, 2017   |

**Note:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to international system unit (SI).

6.2.3. Test Data

| Cellular Band                     |                  |             |       |        |      |        |
|-----------------------------------|------------------|-------------|-------|--------|------|--------|
| Mode                              | GSM 850 PCS 1900 |             |       |        |      | 0      |
| Channel                           | 128              | 128 189 251 |       |        | 661  | 810    |
| Frequency (MHz)                   | 824.2            | 836.4       | 848.8 | 1850.2 | 1880 | 1909.8 |
| Peak-to-<br>Average<br>Ratio (dB) | 2.65             | 2.65        | 2.64  | 2.66   | 2.66 | 2.66   |

Test plots as follows:

| TCT通测检测                   |   |
|---------------------------|---|
| TESTING CENTRE TECHNOLOGY | Report No.: TCT170705E060   |
|                           | frequency was measured at 3 m with a test antenna and a spectrum analyzer with RMS detector per section 5. of KDB 971168 D01.  3. Key the transmitter, then rotate the EUT 360° azimuthally and record spectrum analyzer power level (LVL) measurements at angular increments that are sufficiently small to permit resolution of all peaks. If a |
|                           | standard radiation test site is used, raise and lower the test antenna to obtain a maximum reading at each angular increment.  4. Replace the transmitter under test with a substitution  |
|                           | <ul> <li>antenna. The center of the antenna should be at the same location as the center of the antenna under test.</li> <li>5. Connect the antenna to a signal generator with a known output power and record the path loss (in dB) as LOSS. If a standard radiation test site is used,</li> </ul>   |
|                           | raise and lower the test antenna to obtain a maximum reading.  LOSS = Generator Output Power (dBm) - Analyzer reading (dBm)  6. Determine the effective radiated output power at each   |
|                           | angular position from the readings in steps 3) and 5) using the following equation: ERP (dBm) = LVL (dBm) + LOSS (dB) 7. The maximum ERP is the maximum value determined in the preceding step. 8. Calculating ERP:   |
|                           | ERP (dBm) = Output Power (dBm) - Losses (dB) + Antenna Gain (dBd) Antenna Gain (dBd) = Antenna Gain (dBi) - 2.15 EIRP = ERP – 2.15  |
| Test results:             | PASS  |

**Note:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to international system unit (SI).

## 6.6.3. Test Data

## Frequency Range (9 kHz-30MHz)

| Frequency (MHz) | Level@3m (dBµV/m) | Limit@3m (dBµV/m) |  |
|-----------------|-------------------|-------------------|--|
|                 |                   |                   |  |
|                 |                   |                   |  |
| (c)             | (2)               | (6)               |  |
|                 |                   | (3)               |  |

Note: 1. Emission Level=Reading+ Cable loss-Antenna factor-Amp factor

2. The emission levels are 20 dB below the limit value, which are not reported. It is deemed to comply with the requirement

# 6.7. Frequency Stability Measurement

## 6.7.1. Test Specification

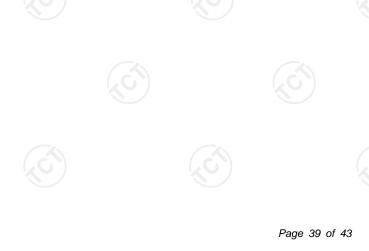

| Test Requirement: | FCC Part 2.1055 ; FCC Part 22.355 ; FCC Part 24.235  |  |  |
|-------------------|--|--|--|
| Test Method:      | FCC Part 2.1055(a)(1)(b)   |  |  |
| Operation mode:   | Refer to item 4.1  |  |  |
| Limit:            | $\pm$ 2.5 ppm  |  |  |
| Test Setup:       | System Simulator EUT  Thermal Chamber  |  |  |
| Test Procedure:   | Test Procedures for Temperature Variation  1. The testing follows FCC KDB 971168 v02r02 Section 9.0.  2. The EUT was set up in the thermal chamber and connected with the system simulator.  3. With power OFF, the temperature was decreased to -30°C and the EUT was stabilized before testing. Power was applied and the maximum change in frequency was recorded within one minute.  4. With power OFF, the temperature was raised in 10° steps up to 50°C. The EUT was stabilized at each step for at least half an hour. Power was applied and the maximum frequency change was recorded with one minute.  Test Procedures for Voltage Variation  1. The testing follows FCC KDB 971168 v02r02 Section 9.0.  2. The EUT was placed in a temperature chamber at 25±5°C and connected with the system simulator.  3. The power supply voltage to the EUT was varied from BEP to 115% of the nominal value measured at the input to the EUT.  4. The variation in frequency was measured for the wood of the supplementation in the follows measured for the wood of the supplementation in frequency was measured for the wood of the follows measured for the wood of the supplementation in frequency was measured for the wood of the follows measured for the follows measured for the follows measured for t |  |  |
| Test Result:      | PASS   |  |  |
| Remark:           | All three channels of all modulations have been tested, but only the worst channel and the worst modulation show in this test item.  |  |  |

## 6.7.2. Test Instruments

| Equipment                                   | Manufacturer | Model             | Serial Number | Calibration Due |
|---|--------------|-------------------|---------------|-----------------|
| System simulator                            | R&S          | CMU200            | 111382        | Oct. 13, 2017   |
| Programable tempratuce and humidity chamber | JQ           | JQ-2000           | N/A           | Oct. 13, 2017   |
| DC power supply                             | Kingrang     | KR3005K<br>30V/5A | N/A           | Oct. 13, 2017   |
| RF cable<br>(9kHz-40GHz)                    | тст          | RE-04             | N/A           | Oct. 13, 2017   |
| Antenna Connector                           | TCT          | RFC-03            | N/A           | Oct. 13, 2017   |

**Note:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to international system unit (SI).

6.7.3. Test Data

## **Test Result of Temperature Variation**
