| Product:          | <b>Digital Transmission Systems</b>  |
| Brand:            | <b>DynaScan</b>  |
| Main Model:       | <b>FBP206</b>  |
| Series Model:     | <b>N/A</b>   |
| Model Difference: | <b>N/A</b>   |
| FCC ID:           | <b>2AKWYFBP206</b>   |
| FCC Rule Part:    | <b>§15.247, Cat: DTS</b>   |
| Reference:        | <b>ANSI C63.10: 2013</b><br><b>KDB 558074 D01 v05r02</b>                       |
| Applicant:        | <b>Dynascan Technology Corp.</b>   |
| Address           | <b>6F., No. 88, Wenmao Rd., Guishan Dist., Taoyuan City<br/>333001, Taiwan</b> |

Test Performed by:

**International Standards Laboratory Corp. LT Lab.**

TEL: +886-3-263-8888 FAX: +886-3-263-8899

No. 120, Lane 180, Hsin Ho Rd., Lung-Tan Dist., Tao Yuan City 325,  
Taiwan

Report No.: ISL-23LR0131FCCTS

Issue Date : October 31, 2023

Test results given in this report apply only to the specific sample(s) tested and are traceable to national or international standard through calibration of the equipment and evaluating measurement uncertainty herein. The uncertainty of the measurement does not include in consideration of the test result unless the customer required the determination of uncertainty via the agreement, regulation or standard document specification. This test report shall not be reproduced except in full, without the written approval of International Standards Laboratory Corp.

## VERIFICATION OF COMPLIANCE

**Applicant:** Dynascan Technology Corp.  
**Equipment Under Test:** Digital Transmission Systems  
**Brand:** DynaScan  
**Main Model:** FBP206  
**Series Model:** N/A  
**Model Difference:** N/A  
**FCC ID:** 2AKWYFBP206  
**Date of Test:** September 18, 2023 ~ October 31, 2023  
**Date of EUT Received:** September 18, 2023

| APPLICABLE STANDARDS |             |
|----------------------|-------------|
| STANDARD             | TEST RESULT |
| FCC Part 15.247      | Complied    |

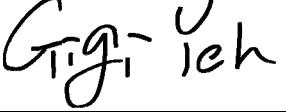

**We hereby certify that:**

All the tests in this report have been performed and recorded in accordance with the standards described above and performed by an independent electromagnetic compatibility consultant, International Standards Laboratory Corp.

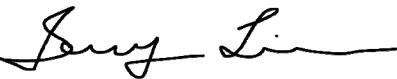

The test results contained in this report accurately represent the measurements of the characteristics and the energy generated by sample equipment under test at the time of the test. The sample equipment tested as described in this report is in compliance with the limits of above standards.

**Test By:**  **Date:** October 31, 2023

*Jason Chao / Senior Engineer*

**Prepared By:**  **Date:** October 31, 2023

*Gigi Yeh / Senior Engineer*

**Approved By:**  **Date:** October 31, 2023

*Jerry Liu / Manager*

## Version

| Version No. | Date             | Description  |
|-------------|------------------|--|
| 00          | October 31, 2023 | This report is a Class II change partial report. Therefore, only test item of Radiated Spurious Emissions tests and Effective Radiated Power and Conducted Emission tests and Band-edges tests were performed for this report. Other testing data please refer to Intertek report no.: 220500397THC-001 & 220500398THC-001 (Limited module, Brand: DynScan, Model: FBP206, FCC ID: 2AKWYFBP206). |
|             |                  |  |

|   |              |       |                    | -2.31 dB        | 5150-5850MHz    |                |

## 1.2 Special Accessories

Not available for this EUT intended for grant.

## 1.3 Equipment Modifications

Not available for this EUT intended for grant.

# 2. System Test Configuration

## 2.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner which intends to maximize its emission characteristics in a continuous normal application.

## 2.2 EUT Exercise

The EUT (Transmitter) was operated in the engineering mode to fix the Tx frequency that was for the purpose of the measurements.

## 2.3 Test Procedure

### 2.3.1 AC Line Conducted Emissions

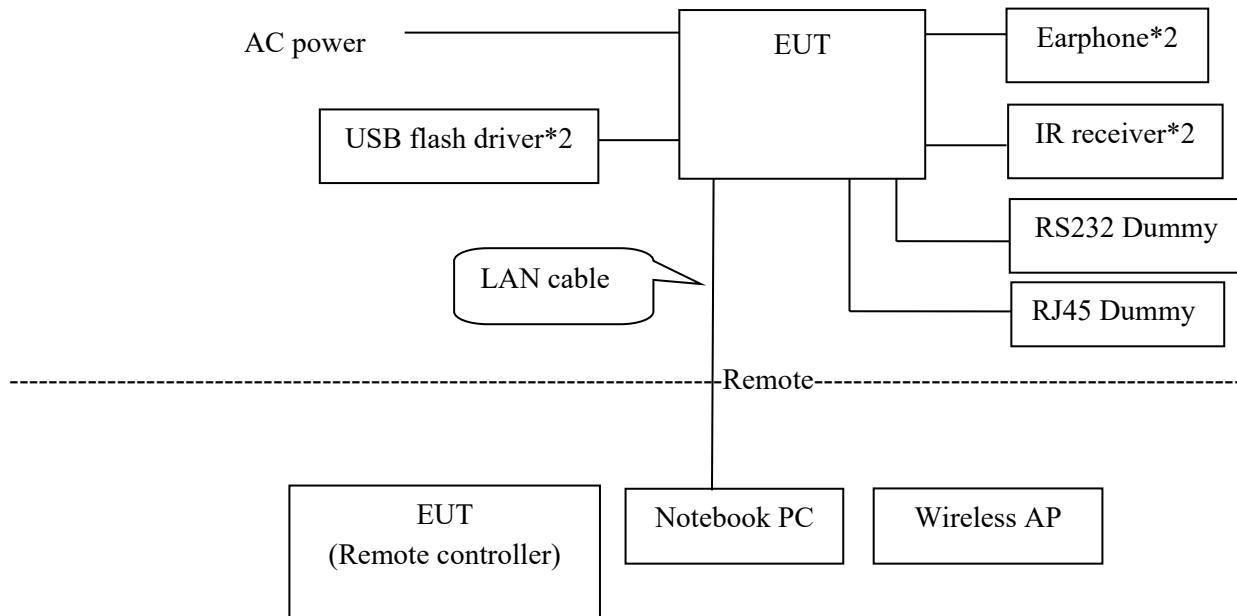

The EUT is placed on a turn table which is 0.8 m above ground plane. According to ANSI C63.10 and RSS-Gen. AC Line Conducted emissions from the EUT measured in the frequency range between 0.15 MHz and 30MHz using CISPR 16-1-1 Quasi-Peak and Average detector mode.

### 2.3.2 Radiated Emissions

The EUT is placed on a turn table which is 0.8 m/1.5m (Frequency above 1GHz) above ground plane. The turn table shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3m away from the receiving antenna which varied from 1m to 4m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the max. emission, the relative positions of this hand-held transmitter (EUT) was rotated through three orthogonal axes according to ANSI C63.10.

## 2.4 Configuration of Tested System

### Configuration of Tested System (Fixed channel)

### Equipment Used in Tested System

| Item | Equipment          | Mfr/Brand | Model/<br>Type No. | Series No. | Data Cable | Power Cord |

| 3    | Earphone*2         | HTC       | RC-E160            | NA         | 1.4m       | NA         |
| 4    | Wireless AP        | NETGEAR   | RAXE500            | NA         | NA         | 1.8m       |
| 5    | RS232 dummy        | NA        | NA                 | NA         | 1.5m       | NA         |
| 6    | RJ45 dummy         | NA        | NA                 | NA         | 1.5m       | NA         |
| 7    | IR receiver        | Dynascan  | NA                 | NA         | 2m         | NA         |
| 8    | Remote controller  | Dynascan  | NA                 | NA         | NA         | NA         |

## 2.5 Summary of Test Results

| FCC Rules           | Description Of Test                       | Result    |
|---------------------|---|-----------|
| §15.207(a)          | AC Power Line Conducted Emission          | Compliant |
| §15.247(b) (3), (4) | Peak Output Power/ EIRP                   | Compliant |
| §15.247(d)          | 100 kHz Bandwidth of Frequency Band Edges | Compliant |
| §15.247(d)          | Spurious Emission                         | Compliant |

## 3. Description of Test Modes

The EUT has been tested under engineering operating condition.

Test program used to control the EUT for staying in continuous transmitting mode is programmed.

Note: Test item list below has been re-verified:

1. AC Power Line Conducted Emission
2. RF Output power
3. Transmitter spurious emissions below 1GHz
4. Transmitter spurious emissions above 1GHz
5. 100 kHz Bandwidth of Frequency Band Edges

Radiated emission test was performed on EUT under continuously transmitting mode. The worst case occurred at 802.11b channel 11(2462MHz).

|               |         | Radiated emission |          |            |
|---------------|---------|-------------------|----------|------------|
| 2.4G Mode     | channel | 9k~30MHz          | 30M~1GHz | above 1GHz |
| 802.11b       | 1       |                   |          | V          |
|               | 6       |                   |          | V          |
|               | 11      | V                 | V        | V          |
| 802.11g       | 1       |                   |          | V          |
|               | 6       |                   |          | V          |
|               | 11      |                   |          | V          |
| 802.11n(HT20) | 1       |                   |          | V          |
|               | 6       |                   |          | V          |
|               | 11      |                   |          | V          |
| 802.11n(HT40) | 3       |                   |          | V          |
|               | 6       |                   |          | V          |
|               | 9       |                   |          | V          |

## 4. AC Line Conduced Emission Test

### 4.1 Standard Applicable

According to §15.207, frequency range within 150kHz to 30MHz shall not exceed the Limit table as below.

| Frequency range<br>MHz | Limits<br>dB(μV) |          |
|------------------------|------------------|----------|
|                        | Quasi-peak       | Average  |
| 0.15 to 0.50           | 66 to 56         | 56 to 46 |
| 0.50 to 5              | 56               | 46       |
| 5 to 30                | 60               | 50       |

Note

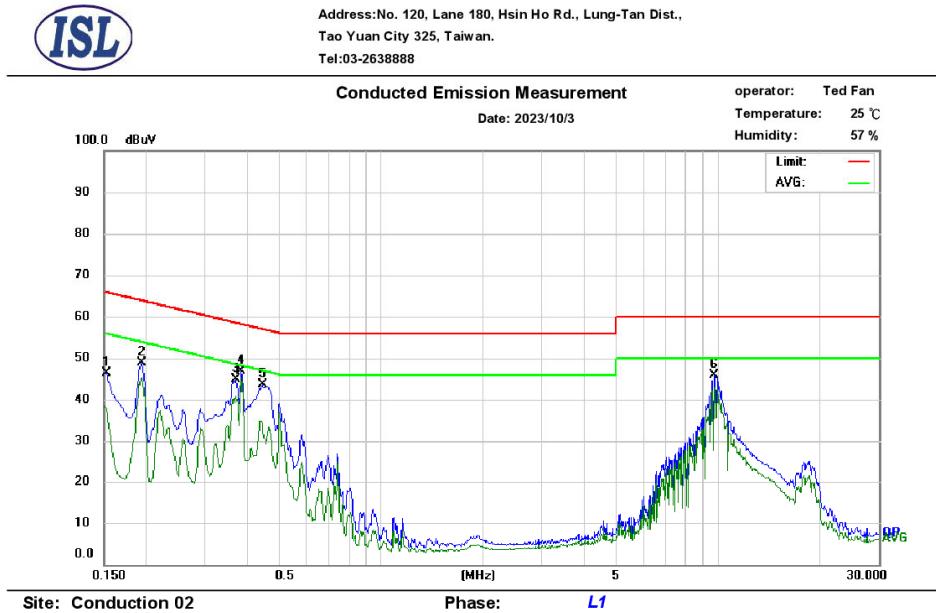

1. The lower limit shall apply at the transition frequencies
2. The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.50 MHz.

### 4.2 Measurement Procedure

1. The EUT was placed on a table which is 0.8m above ground plane.
2. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
3. Repeat above procedures until all frequency measured were complete.
4. Both 120V & 240V have been verified, and 120V/60Hz was defined as the worst-case and record in the report.

### 4.3 Measurement Result

- Line

 If peak data can pass, it will be shown in "QP/AVG Correct" column, if not, QP/AVG data will instead.

## 5. Peak Output Power Measurement

### 5.1 Standard Applicable

According to §15.247

(3) For systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power. Maximum Conducted Output Power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signaling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements. The average must not include any time intervals during which the transmitter is off or is transmitting at a reduced power level. If multiple modes of operation are possible (e.g., alternative modulation methods), the maximum conducted output power is the highest total transmit power occurring in any mode.

(4) The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

(c) Operation with directional antenna gains greater than 6 dBi.

(1) Fixed point-to-point operation:

(i) Systems operating in the 2400-2483.5 MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6 dBi.

(ii) Systems operating in the 5725-5850 MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter conducted output power.

### 5.2 Measurement Procedure

1. Place the EUT on the table and set it in transmitting mode.
2. Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the power meter or spectrum analyzer with proper instrument's parameters.
3. Record the max. reading.
4. Repeat above procedures until all frequency measured were complete.

### 5.3 Measurement Result

Peak Power

## 6. Radiated Spurious Emission Test

### 6.1 Standard Applicable

According to §15.247(d), all other emissions outside these bands shall not exceed the general radiated emission limits specified in §15.209(a). And according to §15.33(a)(1), for an intentional radiator operates below 10GHz, the frequency range of measurements: to the tenth harmonic of the highest fundamental frequency or to 40GHz, whichever is lower.

### 6.2 Measurement Procedure

1. The EUT was placed on a turn table which is 0.8m/1.5m above ground plane in 966 chamber.
2. The turn table shall rotate 360 degrees to determine the position of maximum emission level.
3. EUT is set 3m away from the receiving antenna which varied from 1m to 4m to find out the highest emissions.
4. When measurement procedures for electric field radiated emissions above 1 GHz the EUT measurement is to be made “while keeping the antenna in the ‘cone of radiation’ from that area and pointed at the area both in azimuth and elevation, with polarization oriented for maximum response.” is still within the 3dB illumination BW of the measurement antenna.
5. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
6. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
7. Repeat above procedures until all frequency measured were complete.

|                       |   |
|-----------------------|---|
| Test receiver setting | : Blew 1GHz   |
| Detector              | : Average (9kHz – 90kHz, 110kHz – 90kHz), Quasi-Peak  |
| Bandwidth             | : 200Hz, 120kHz                                       |
| Test spectrum setting | : Above 1GHz  |
| Peak                  | : RBW=1MHz, VBW $\geq$ 3*RBW, Sweep=auto              |
| Average               | : RBW=1MHz, VBW $\geq$ 1/T <sub>on</sub> , Sweep=auto |

### 6.3 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor (if any) from the measured reading. The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CL - AG$$

|       |                        |  |
|-------|------------------------|--|
| Where | FS = Field Strength    | CL = Cable Attenuation Factor (Cable Loss) |
|       | RA = Reading Amplitude | AG = Amplifier Gain                        |
|       | AF = Antenna Factor    |  |

Remark:

<1GHz

1. No further spurious emissions detected from the lowest internal frequency and 30MHz.
2. Measuring frequencies from the lowest internal frequency to the 1GHz.
3. Radiated emissions measured in frequency range from 9kHz to 1000MHz were made with an instrument detector setting 9-90kHz/110-490kHz using PK/AV and other Frequency Band using PK/QP
4. Measurement result within this frequency range shown “ - ” in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.

>1GHz

- 5 Measuring frequencies from the lowest internal frequency to the 10th of fundamental frequency
- 6 Field strength limits for frequency above 1000MHz are based on average limits. However, Peak mode field strength shall not exceed the average limits specified plus 20dB.
- 7 Measurement of data within this frequency range shown “ - ” in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.

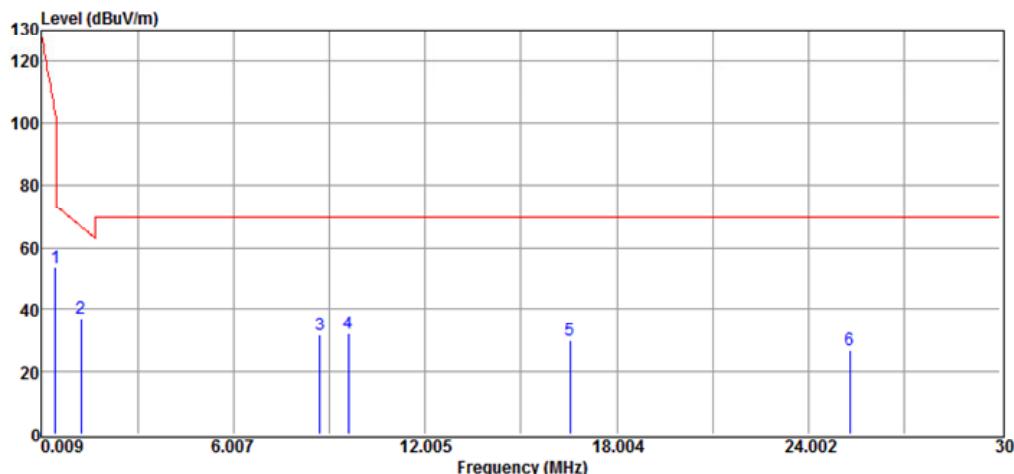

## 6.4 Measurement Result

### 6.4.1 Radiated Spurious Emission Measurement Result (below 1GHz)

## 7. 100kHz Bandwidth of Band Edges Measurement

### 7.1 Standard Applicable

According to §15.247(d), in any 100 kHz bandwidth outside the frequency bands in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in 15.209(a).

### 7.2 Measurement Procedure

1. Place the EUT on the table and set it in transmitting mode.
2. Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to the spectrum analyzer.
3. Set center frequency of spectrum analyzer = operating frequency.
4. Set the spectrum analyzer as  $RBW=1\text{MHz}$ ,  $VBW \geq 3 * RBW$  (for Peak);  $VBW \geq 1/T_{on}$  (for Average), Sweep = auto.
5. Mark Peak, 2.390GHz and 2.4835GHz and record the max. level.
6. Repeat above procedures until all frequency measured were complete.

### 7.3 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor (if any) from the measured reading. The basic equation with a sample calculation is as follows:

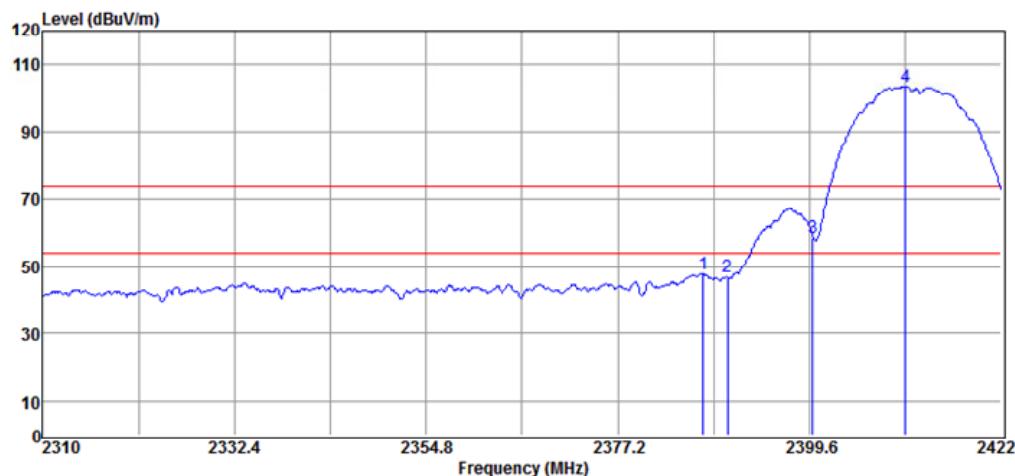

$$FS = RA + AF + CL - AG$$

|       |                        |  |
|-------|------------------------|--|
| Where | FS = Field Strength    | CL = Cable Attenuation Factor (Cable Loss) |
|       | RA = Reading Amplitude | AG = Amplifier Gain                        |
|       | AF = Antenna Factor    |  |

## 8.2 Appendix B: Uncertainty of Measurement

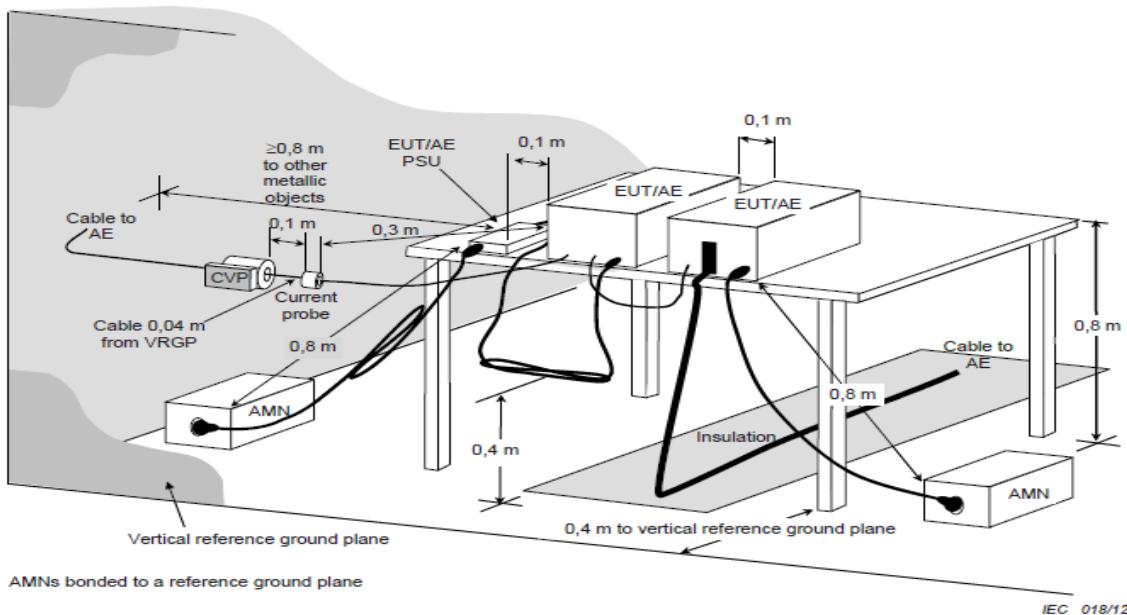

ISO/IEC 17025 requires that an estimate of measurement uncertainties associated with the emissions test results be included in the report. The measurement uncertainties given below are based on a 95% confidence level (based on a coverage factor ( $k=2$ )).

| Parameters                         | Uncertainty ( $k=2$ ) |
|------------------------------------|-----------------------|
| Conducted Emission (AC power line) | $\pm 0.64$ dB         |
| Spurious emissions, radiated       | $\pm 3.5$ dB          |
| RF power, conducted                | $\pm 1.6$ dB          |
| Power Density                      | $\pm 1.7$ dB          |
| RF Frequency                       | $\pm 0.0041\%$        |
| Time                               | $\pm 0.01\%$          |
| DC Voltage                         | $\pm 0.03\%$          |

### 8.3 Appendix C: Test Setup

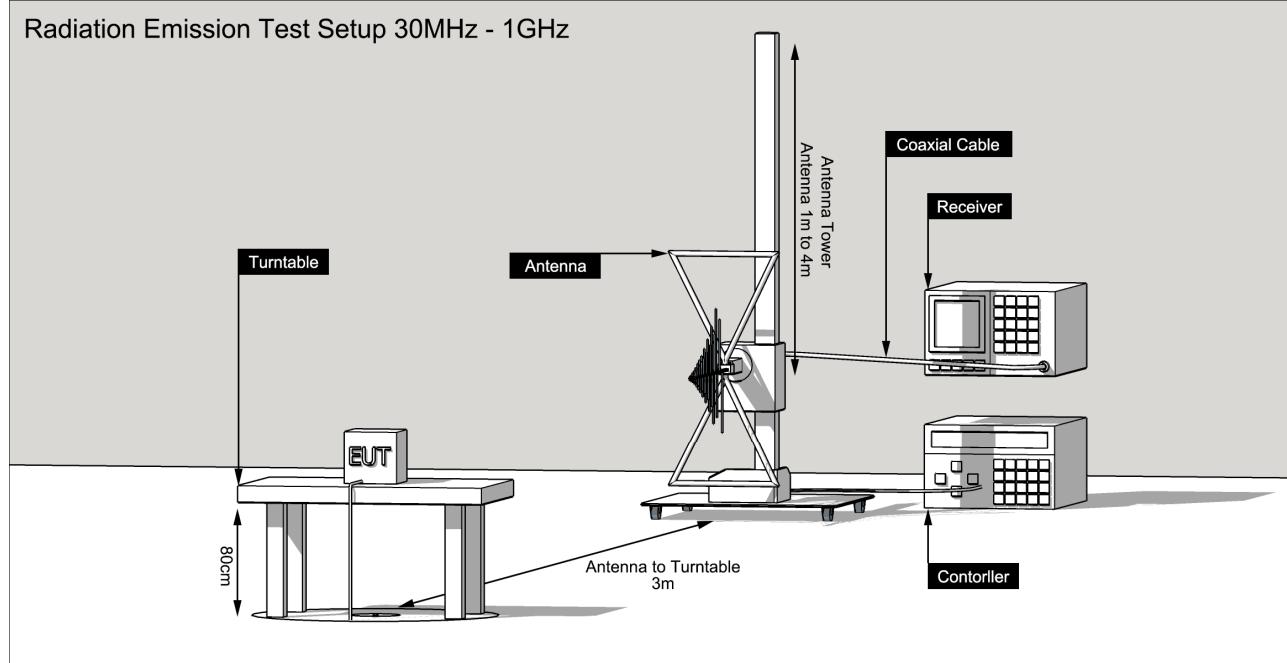

#### AC Line Conduced Emission Test Setup

1. The conducted emission tests were performed in the test site, using the setup in accordance with the ANSI C63.10-2013.
2. The AC/DC Power adaptor of EUT was plug-in LISN. The EUT was placed flushed with the rear of the table.
3. The LISN was connected with 120Vac/60Hz power source.

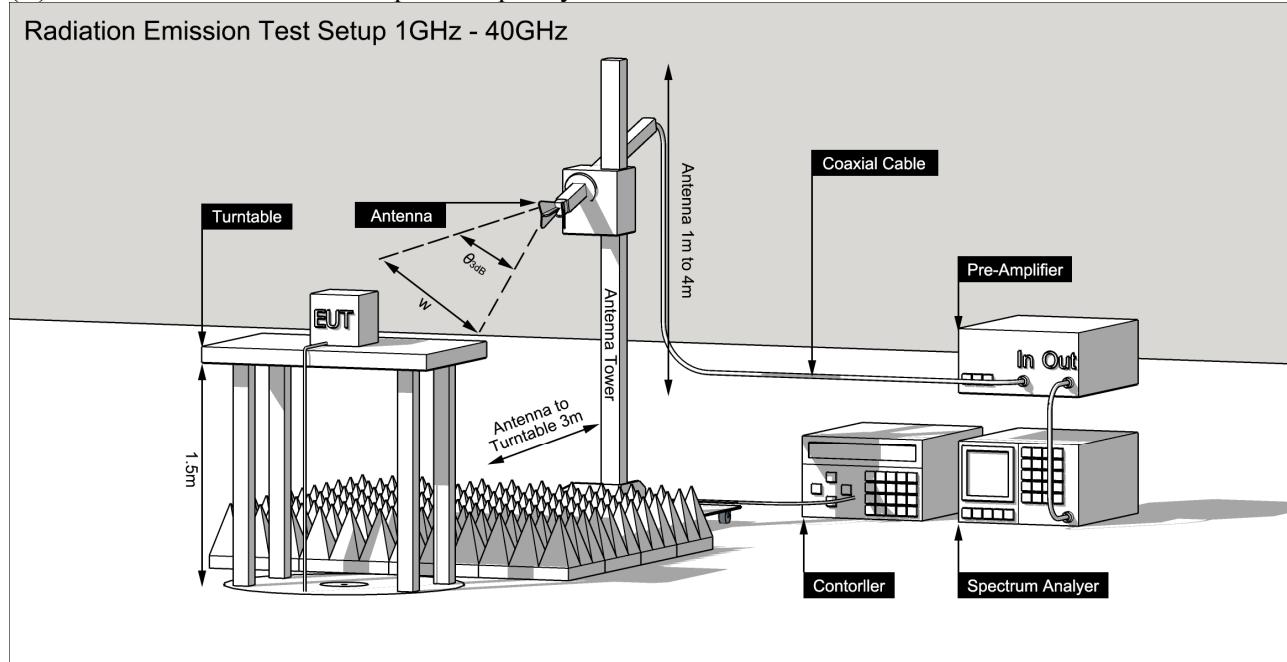

**Radiated Spurious Emission Test & 100kHz Bandwidth of Band Edges Measurement Test Setup**

(A) Radiated Emission Test Setup for frequency below 1000MHz

(B) Radiated Emission Test Setup for frequency above 1 GHz

**RF Conducted Measurement Test Setup**
