## FCC §15.247 (i), §2.1091 - RF Exposure

## FCC ID: 2AL65-SLD001

## Applied procedures / limit

According to FCC $\S 15.247$ (i) and $\S 1.1307$ (b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

## MPE PREDICTION

Predication of MPE limit at a given distance, Equation from OET Bulletin 65, Edition 97-01

$$
\mathrm{S}=\mathrm{PG} / 4 \pi \mathrm{R}^{2}
$$

Where: $\mathrm{S}=$ power density
$\mathrm{P}=$ power input to antenna
$\mathrm{G}=$ power gain of the antenna in the direction of interest relative to an isotropic radiator $R=$ distance to the center of radiation of the antenna, $R=0.2 m$
