3 General Product Information

3.1 Product Function and Intended Use

The LTTH CPE outdoor unit (ODU) includes high-gain beam forming antenna and LTE modem providing the LTE broadband access to the network. ODU is connected to the indoor unit (IDU) through 10/100/100Mbps tri-speed ethernet PHY that provides power from the IDU to the ODU as well as the high speed data connection. ODU is LTE CAT4 capable and supports non-CA LTE band 41.

3.2 Ratings and System Details

Table 3: Ratings and System Details

Operating Frequency	Refer page 6 of 56
Power Class	3 (23dBm)
Release	10
Modulation Type	QPSK , 16-QAM
Number of Antenna – Two	Primary Antenna – One Diversity Antenna - One
Antenna Gain	14.5dBi
Antenna type	High gain cross polarized antenna PCBA mounted internal to enclosure with co-axial cable connection to the main board
Supply Voltage to Product	54V DC via PoE from IDU (Indoor Unit)
Environmental	Operating Temperature: -20 °C to +65 °C (Normal) -30 °C to +65 °C (Arctic) Storage Temperature : -40 °C to +85 °C

Test Conditions:

Supply Voltage: PoE Adaptor

Environmental conditions:

Temperature: +24.7 °C RH: 57.2 %

NTC	Normal Voltage (from POE), Normal Temperature(+25°C)
HT	High Temperature (+65 °C)
LT	Low Temperature (-30 °C)

Equipment used for testing

Table 4: Equipment used for Testing

Equipment Used for	S/N Number	IMEI No & ISMI No.	Hardware Version	Software version
Conducted Measurement on Antenna Port	LC173300112	359020070001388 & 001010123456063	02	1.4.47
Radiated Mode Test	LC173300127	359020070003160 & 001010123456063	02	1.4.47

Summary of Measured Power & Emission Designator:

Table 5: Summary of Measured Power & Emission Designator

TDD Band	Bandwidth	Maximum Power - Conducted Mode - QPSK (Pk)		Maximum Power - Conducted Mode - 16-QAM (Pk)		Output Power (dBm) - Radiated Mode -QPSK
		dBm	Watt	dBm	Watt	
41	5	26.95	0.50	26.97	0.50	35.97
	10	26.87	0.49	26.91	0.49	36.32
	15	26.49	0.45	26.95	0.50	35.98
	20	26.36	0.43	26.75	0.47	35.42

Emission Designator Details

Table 6: Emission Designator Details

TDD Band	Bandwidth	Emission Designator (QPSK)	Emission Designator (16-QAM)
41	5	4M51G7W	4M51D7W
	10	8M91G7W	8M91D7W
	15	13M4G7W	13M4D7W
	20	17M8G7W	17M8D7W

TDD bands Frequency Details:

Table 7: Operating frequency details

TDD Band	Transmitter Frequency (Uplink) (MHz)	Receiver Frequency (Downlink) (MHz)
41	2496 - 2690	2496 - 2690

Frequency List of Low/Mid/High channel

Table 8: Frequency List of Low/Mid/High channel

LTE TDD Band 41				
Bandwidth	Channel/Frequency (MHz)	Low	Mid	High
5	Channel No.	39675	40620	41565
	Frequency	2498.5	2593	2687.5
10	Channel No.	39700	40620	41540
	Frequency	2501	2593	2685
15	Channel No.	39725	40620	41515
	Frequency	2503.5	2593	2682.5
20	Channel No.	39750	40620	41490
	Frequency	2506	2593	2680

3.3 Measurement Uncertainty:

Table 9: Measurement Uncertainty

Parameter	Uncertainty
Occupied Channel Bandwidth	±5 %
RF output power, conducted	±1.5 dB
Power Spectral Density, conducted	±3 dB
Unwanted Emissions, conducted	±3 dB
All emissions, radiated	±6 dB
Temperature	±3 °C
Supply Voltages	±3 %
Time	±5 %

4 Operational Description

The ODU is installed on the wall/pole outside the house and is connected to the IDU through PoE+ interface. The ODU is connected to a eNodeB that has pre-allocated capacity to the CPE. The end user devices in the house are connected to the IDU over Wi-Fi or Ethernet. The LTE CPE supports max throughput of DL / UL speeds of 150/50 Mbps. It supports bandwidths of 5/10/15/20 MHz.

ODU has only LTE Feature.

5 Test Set-up and Operation Mode

5.1 Principle of Configuration Selection

Transmission was enabled with help of CMW500 on low, mid and high channel

5.2 Test Operation and Test Software

No Special Test software used for enabling the Transmission, SIM inserted in EUT to communicate with CMW500 simulator

Special Accessories and Auxiliary Equipment

- None

Countermeasures to achieve EMC Compliance

- None

5.3 Test Modes – Data Rates and Modulations

For Radiated spurious emissions, the tests were performed for all RB's & 2 modulations on Low, Mid & High channels and only worst case results are reported in this report.

6 Test Methodology

Radiated Emission Test

Frequency Range 9 kHz - 30 MHz

Test performed as per ANSI C63.4-2014 section 8.3

The loop Antenna was placed at 1m above the ground plane & EUT is 3 meters far from the measuring antenna. With 3m measurement distance, correction data were applied to the measured results. The test arrangement, measuring antenna guidelines and operational configurations in 8.2.1 and 8.2.2, shall be followed. The measurement antenna shall be positioned with its plane perpendicular to the ground at the Specified distance, when perpendicular to the ground plane, the lowest height of the magnetic antenna shall be 1 m above the ground and shall be positioned at the specified distance from the EUT. EUT & its associates are placed on non-conducting table of 0.8m height which is placed on the turn table, For each measurement antenna alignment, the EUT shall be rotated through 0° to 360° on a turntable. The report shall list worst case emission results, for each of the parallel & perpendicular orientations.

Frequency Range 30MHz to 10th harmonics of the highest fundamental frequency

Test performed as per ANSI C63.26-2015

ERP/EIRP Radiated Power & Radiated spurious emission test are performed as below.

The equipment under test is placed on non-conductive table at 3m away from the receive antenna in accordance with above mentioned standard. Turn table is rotated through 360 degree, and receiver antenna height is varied in order to determine the level of maximum emission. The maximum emission level and position of the maximized emission is recorded with use of spectrum analyzer.

The EUT is substituted by a substitution antenna. The substitute antenna is connected to a signal generator. Adjust the output level of the signal generator to get the same power recorded in with EUT and record the power level of Signal Generator. The cable loss at the test frequency should be compensated

The Power is calculated by the following formula

$$Pe = Ps(\text{dBm}) - \text{cable loss (dB)} + \text{antenna gain (dBd)}$$

Where

Pe = equivalent emission power in dBm

Ps = source (signal generator) power in dBm

These steps are repeated with the receiving antenna in the both vertical & horizontal polarization

Measurement Method

Substitute measurement method

7 Test Results

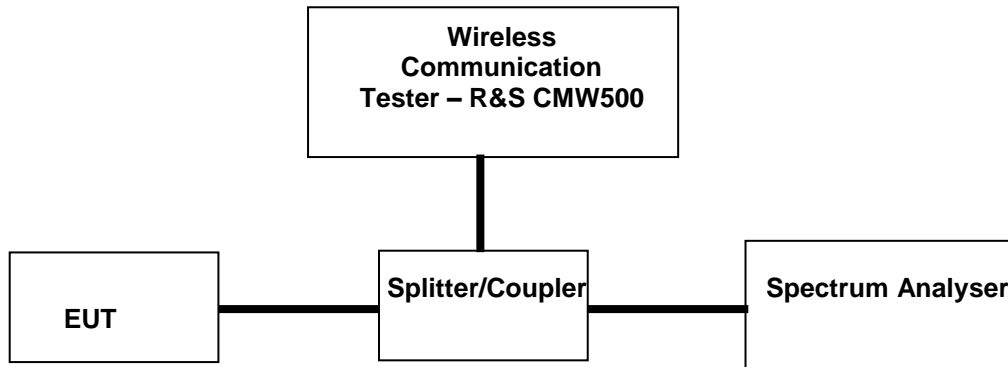

7.1 RF Output Power – Conducted Mode

Result

Pass

Specification FCC Part §2.1046, §27.50 (h)(2)
 Measurement Bandwidth (RBW) ≥ OBW
 Detector Function Peak/Average

Test Setup:

Note: For measurement of RF Output Power, sub clause 5.1.2 & 5.2.3.2 & Measurement of Peak to Average Power Ratio (PAPR), sub clause 5.7.3 of “971168 D01 Power Meas License Digital Systems v03” was used. Attenuator & Cable loss is included in the test results

PAPR – Peak to Average Power Ratio
 1RBL – 1 RB Low
 1RBH – 1RB High

Test Results

8.2 Frequency Stability

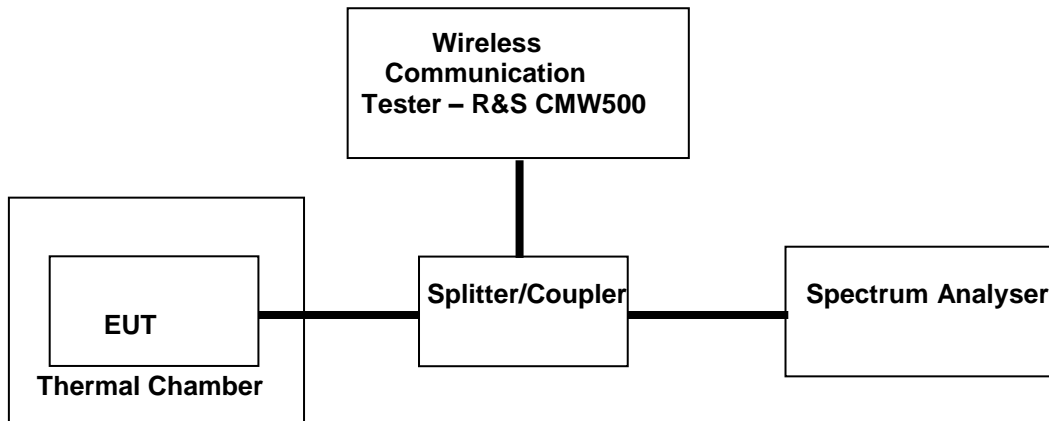

Result

Pass

Specification FCC Part §2.1055 & §27.54

Requirement Frequency Stability shall be sufficient to ensure that the fundamental emission stay within the authorised frequency block.

Test Setup:

Note: For measurement of Frequency Stability, sub clause 9.0 of “971168 D01 Power Meas License Digital Systems v03” was used. Attenuator & Cable loss included in the test results.

Test Results

Table 14: Frequency Stability on Temperature variation Test results

TDD Band	Bandwidth (MHz)	Channel Frequency (MHz)	Temperature (°C)	Maximum Frequency Error		Limit
				(Hz)	(ppm)	
41	5	2593	-30	21.51	0.008295	Fundamental emissions stay within the authorized bands of operation

8.4 Field Strength of Spurious Radiation

Result

Pass

Specification	FCC Part §2.1053, §27.53(m)(2)(V)
Measurement Bandwidth (RBW)	100 kHz (for frequency ≤1GHz) & 1 MHz (for Frequency ≥ 1GHz)
Detector Function	Peak
Requirement	Attenuation below transmitter power shall not be more than -13 dBm

Test Setup:

Refer section 6 of the test report.

Note: For measurement of Field strength spurious radiation, test procedure as per “ANSI C63.26-2015, sub clause 5.2.7” and KDB “971168 D02 Misc Rev Approv License Devices v02r01, sub clause IV” was used.

Test Results:

No Emission found in the frequency range from 9kHz to 30 MHz

Table 16: Field strength of spurious radiation below 1 GHz

Antenna Polarization	Measured Frequency (MHz)	Field strength of Spurious Emission (dBm)	Limit (dBm)	Margin (dB)
Vertical	37.42	-74.64	-13.00	-61.64
	56.24	-78.78	-13.00	-65.78
	71.99	-66.71	-13.00	-53.71
