

# TEST REPORT

**Product Name** : Smart Body Fat Scale  
**Brand Mark** : PICOOC  
**Model No.** : S3 lite V2.0, Mini Plus 2  
**FCC ID** : 2ALE7-S3LITE  
**Report Number** : BLA-EMC-202007-A4401  
**Date of Sample Receipt** : 2020/7/17  
**Date of Test** : 2020/7/17 to 2020/7/30  
**Date of Issue** : 2020/8/1  
**Test Standard** : 47 CFR Part 15, Subpart C 15.247  
**Test Result** : Pass

Prepared for:

**PICOOC Technology Co.,Ltd**

**Room 507, F/5, Wanwei Building, No.5 Industrial Road, NanShan District  
Shenzhen, China**

## 1 TEST SUMMARY

| Test item   | Test Requirement                 | Test Method                            | Class/Severity                               | Result |
|---|----------------------------------|--|--|--------|
| Conducted Spurious Emissions                          | 47 CFR Part 15, Subpart C 15.247 | ANSI C63.10 (2013) Section 7.8.8       | 47 CFR Part 15, Subpart C 15.247(d)          | Pass   |
| Conducted Band Edges Measurement                      | 47 CFR Part 15, Subpart C 15.247 | ANSI C63.10 (2013) Section 7.8.6       | 47 CFR Part 15, Subpart C 15.247(d)          | Pass   |
| Power Spectrum Density                                | 47 CFR Part 15, Subpart C 15.247 | ANSI C63.10 (2013) Section 11.10.2     | 47 CFR Part 15, Subpart C 15.247(e)          | Pass   |
| Conducted Peak Output Power                           | 47 CFR Part 15, Subpart C 15.247 | ANSI C63.10 (2013) Section 7.8.5       | 47 CFR Part 15, Subpart C 15.247(b)(1)       | Pass   |
| Minimum 6dB Bandwidth                                 | 47 CFR Part 15, Subpart C 15.247 | ANSI C63.10 (2013) Section 11.8.1      | 47 CFR Part 15, Subpart C 15.247a(2)         | Pass   |
| Conducted Emissions at AC Power Line (150kHz-30MHz)   | 47 CFR Part 15, Subpart C 15.247 | ANSI C63.10 (2013) Section 6.2         | 47 CFR Part 15, Subpart C 15.207             | N/A    |
| Antenna Requirement                                   | 47 CFR Part 15, Subpart C 15.247 | N/A                                    | 47 CFR Part 15, Subpart C 15.203 & 15.247(c) | Pass   |
| Radiated Spurious Emissions                           | 47 CFR Part 15, Subpart C 15.247 | ANSI C63.10 (2013) Section 6.4,6.5,6.6 | 47 CFR Part 15, Subpart C 15.209 & 15.247(d) | Pass   |
| Radiated Emissions which fall in the restricted bands | 47 CFR Part 15, Subpart C 15.247 | ANSI C63.10 (2013) Section 6.10.5      | 47 CFR Part 15, Subpart C 15.209 & 15.247(d) | Pass   |

## 2 GENERAL INFORMATION

|                       |   |
|-----------------------|---|
| <b>Applicant</b>      | PICOOC Technology Co.,Ltd   |
| <b>Address</b>        | Room 507, F/5, Wanwei Building, No.5 Industrial Road, NanShan District, shenzhen, China |
| <b>Manufacturer</b>   | PICOOC Technology Co.,Ltd   |
| <b>Address</b>        | Room 507, F/5, Wanwei Building, No.5 Industrial Road, NanShan District, shenzhen, China |
| <b>Factory</b>        | PICOOC Technology Co.,Ltd   |
| <b>Address</b>        | Room 507, F/5, Wanwei Building, No.5 Industrial Road, NanShan District, shenzhen, China |
| <b>Product Name</b>   | Smart Body Fat Scale  |
| <b>Test Model No.</b> | S3 lite V2.0  |

## 3 GENERAL DESCRIPTION OF E.U.T.

|                             |   |
|-----------------------------|---|
| <b>Hardware Version</b>     | V1.0  |
| <b>Software Version</b>     | A1.0  |
| <b>Operation Frequency:</b> | 802.11b/g/n(HT20): 2412MHz to 2462MHz<br>802.11n(HT40): 2422MHz to 2452MHz      |
| <b>Modulation Type:</b>     | 802.11b: DSSS (CCK, DQPSK, DBPSK)<br>802.11g/n: OFDM (64QAM, 16QAM, QPSK, BPSK) |
| <b>Channel Spacing:</b>     | 5MHz  |
| <b>Number of Channels:</b>  | 802.11b/g/n(HT20): 11<br>802.11n(HT40): 7                                       |
| <b>Antenna Type:</b>        | PCB antenna   |
| <b>Antenna Gain:</b>        | -4.5dBi (declared by the manufacturer)  |

#### 4 TEST ENVIRONMENT

| Environment | Temperature | Voltage |
|-------------|-------------|---------|
| Normal      | +25°C       | 3.3Vdc  |

#### 5 TEST MODE

| TEST MODE               | TEST MODE DESCRIPTION   |
|-------------------------|---|
| TX mode with modulation | Keep the EUT in continuously transmitting with modulation mode. (Dutycycle>98%) |

Remark: Only the data of the worst mode would be recorded in this report. New battery is used during all test.

#### 6 MEASUREMENT UNCERTAINTY

| Parameter                        | Expanded Uncertainty (Confidence of 95%) |
|----------------------------------|--|
| Radiated Emission                | ±4.34dB                                  |
| Radiated Emission                | ±4.24dB                                  |
| Radiated Emission                | ±4.68dB                                  |
| AC Power Line Conducted Emission | ±3.45dB                                  |

| Parameter                           | Expanded Uncertainty (Confidence of 95%) |
|-------------------------------------|--|
| Occupied Channel Bandwidth          | ±5 %                                     |
| RF output power, conducted          | ±1.5 dB                                  |
| Power Spectral Density, conducted   | ±3.0 dB                                  |
| Unwanted Emissions, conducted       | ±3.0 dB                                  |
| Temperature                         | ±3 °C                                    |
| Supply voltages                     | ±3 %                                     |
| Time                                | ±5 %                                     |
| Radiated Emission (30MHz ~ 1000MHz) | ±4.35 dB                                 |
| Radiated Emission (1GHz ~ 18GHz)    | ±4.44 dB                                 |

## 7 DESCRIPTION OF SUPPORT UNIT

| Device Type | Manufacturer | Model Name | Serial No. | Remark |
|-------------|--------------|------------|------------|--------|
| PC          | HASEE        | K610D      | N/A        | N/A    |
| AC Adapter  | PISEN        | TS-C051    | N/A        | N/A    |

## 8 LABORATORY LOCATION

All tests were performed at:  
BlueAsia of Technical Services(Shenzhen) Co., Ltd.  
IOT Test Centre of BlueAsia  
No. 448 Bulong Road, Bantian Street, Longgang District, Shenzhen, China  
Telephone: TEL: +86-755-28682673 FAX: +86-755-28682673  
No tests were sub-contracted.

## 9 TEST INSTRUMENTS LIST

| Test Equipment Of Conducted Spurious Emissions |              |        |            |            |            |
|--|--------------|--------|------------|------------|------------|
| Equipment                                      | Manufacturer | Model  | S/N        | Cal.Date   | Cal.Due    |

## CONDUCTED SPURIOUS EMISSIONS

|                               |                                  |
|-------------------------------|----------------------------------|
| <b>Test Standard</b>          | 47 CFR Part 15, Subpart C 15.247 |
| <b>Test Method</b>            | ANSI C63.10 (2013) Section 7.8.8 |
| <b>Test Mode (Pre-Scan)</b>   | TX mode with modulation          |
| <b>Test Mode (Final Test)</b> | TX mode with modulation          |
| <b>Tester</b>                 | Eason                            |
| <b>Temperature</b>            | 24°C                             |
| <b>Humidity</b>               | 25%                              |

### LIMITS

|               |  |
|---------------|--|
| <b>Limit:</b> | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)). |

## ANTENNA REQUIREMENT

|                      |                                  |
|----------------------|----------------------------------|
| <b>Test Standard</b> | 47 CFR Part 15, Subpart C 15.247 |
| <b>Test Method</b>   | N/A                              |

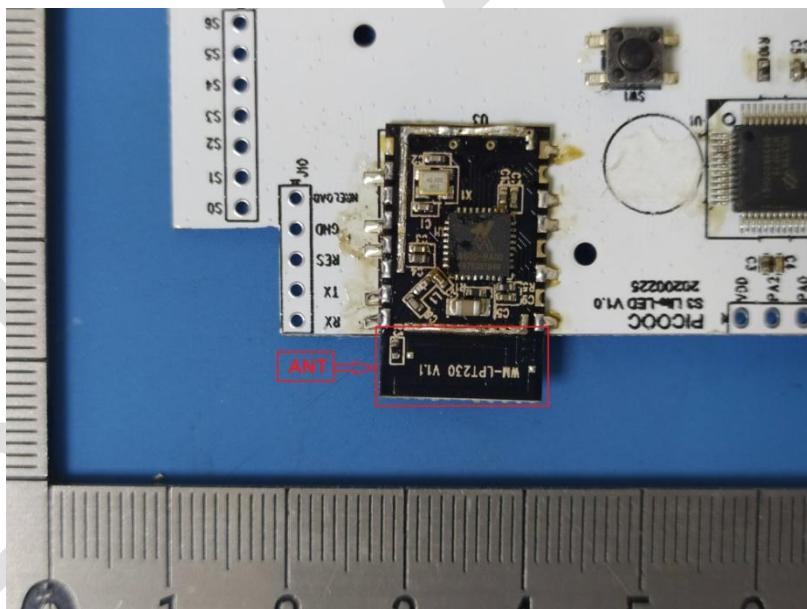

## CONCLUSION

Standard Requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit permanently attached antenna or of an so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

EUT Antenna:

The antenna is integrated on the main PCB and no consideration of replacement. The best case gain of the antenna is -4.5dBi.

## RADIATED SPURIOUS EMISSIONS

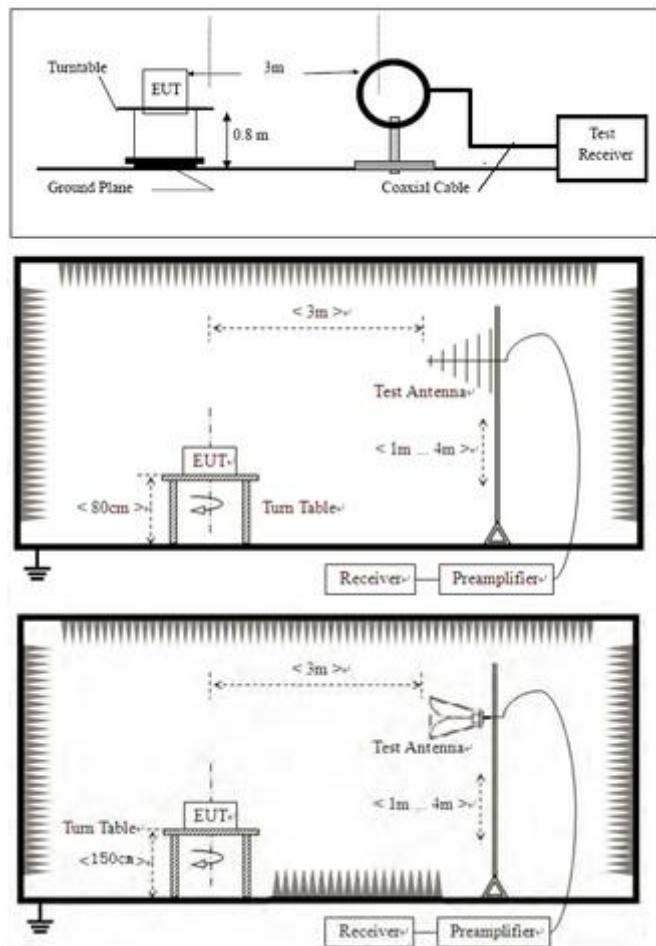

|                               |   |
|-------------------------------|---|

### LIMITS

| <b>Frequency(MHz)</b> | <b>Field strength(microvolts/meter)</b> | <b>Measurement distance(meters)</b> |
|-----------------------|---|-------------------------------------|
| 0.009-0.490           | 2400/F(kHz)                             | 300                                 |
| 0.490-1.705           | 24000/F(kHz)                            | 30                                  |
| 1.705-30.0            | 30                                      | 30                                  |
| 30-88                 | 100                                     | 3                                   |
| 88-216                | 150                                     | 3                                   |
| 216-960               | 200                                     | 3                                   |
| Above 960             | 500                                     | 3                                   |

Remark: The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90kHz, 110-490kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.

## BLOCK DIAGRAM OF TEST SETUP

## PROCEDURE

- For below 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 or 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- For above 1GHz, the EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter fully-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- The EUT was set 3 or 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

- h. Test the EUT in the lowest channel, the middle channel, the Highest channel.
- i. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.
- j. Repeat above procedures until all frequencies measured was complete.

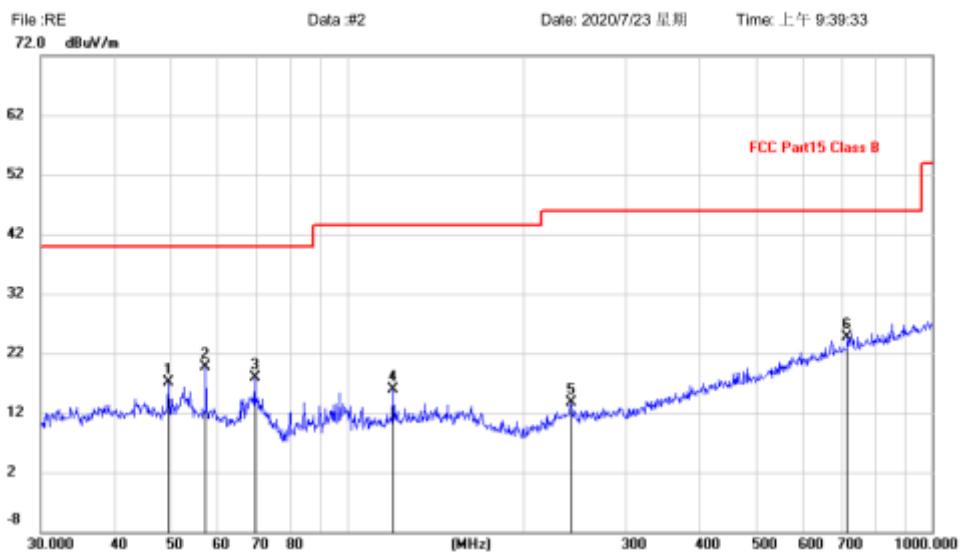

Remark:

- 1) For emission below 1GHz, through pre-scan found the worst case is the lowest channel. Only the worst case is recorded in the report.
- 2) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:  
Final Test Level = Receiver Reading + Antenna Factor + Cable Factor "C Preamplifier Factor
- 3) Scan from 9kHz to 25GHz, the disturbance above 13GHz and below 30MHz was very low. The points marked on above plots are the highest emissions could be found when testing, so only above points had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported.
- 4) For frequencies above 1GHz, the field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation. For the emissions whose peak level is lower than the average limit, only the peak measurement is shown in the report.

| 30-88                 | 100                                     | 3                                   |
| 88-216                | 150                                     | 3                                   |
| 216-960               | 200                                     | 3                                   |
| Above 960             | 500                                     | 3                                   |

Remark: The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90kHz, 110-490kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.

## BLOCK DIAGRAM OF TEST SETUP

## PROCEDURE

- For below 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 or 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- For above 1GHz, the EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter fully-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- The EUT was set 3 or 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

- h. Test the EUT in the lowest channel, the middle channel, the Highest channel.
- i. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.
- j. Repeat above procedures until all frequencies measured was complete.

Remark 1: Level= Read Level+ Cable Loss+ Antenna Factor- Preamp Factor

Remark 2: For frequencies above 1GHz, the field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation. For the emissions whose peak level is lower than the average limit, only the peak measurement is shown in the report.
