

# FCC PART 15 SUBPART C TEST REPORT

# FCC PART 15.247

	1001 AIII 13.247					
Report Reference No: FCC ID	GTSR17060126-01 2ALNA-EB06					
Compiled by ( position+printed name+signature):	File administrators Jimmy Wang	Jon Mer				
Supervised by ( position+printed name+signature):	Test Engineer Peter Xiao					
Approved by ( position+printed name+signature):	Manager Sam Wang	Son Wong				
Date of issue:	Jun. 27, 2017	_				
Representative Laboratory Name .:	Shenzhen Global Test Service C	Co.,Ltd.				
Address:	1F, Building No. 13A, Zhonghaixir No.12,6 Road, Ganli Industrial Pa Shenzhen, Guangdong					
Applicant's name:	Shenzhen Thousandshores Tec	hnology Co., Ltd.				
Address:	5th Floor, Chuangxin Building, Se North Alley,Chuangye 2nd Road,					
Test specification:						
Standard:	FCC Part 15.247: Operation with 2400-2483.5 MHz and 5725-5850					
TRF Originator	Shenzhen Global Test Service Co	.,Ltd.				
Master TRF	Dated 2014-12					
Shenzhen Global Test Service Co.,L This publication may be reproduced in Shenzhen Global Test Service Co.,Ltd Shenzhen Global Test Service Co.,Ltd resulting from the reader's interpretation	whole or in part for non-commercia . is acknowledged as copyright owr . takes no responsibility for and will	ner and source of the material. not assume liability for damages				
Test item description	Bluetooth receiver					
Trade Mark:	/					
Manufacturer:	Shenzhen James Audio Techno	logy CO.,Ltd				
Model/Type reference:	EB06					
Listed Models	EB07,EB08					
Modulation Type	GFSK					
Operation Frequency	From 2402MHz to 2480MHz					
EUT Type	Production Unit					
Hardware Version	BT07_ATS2823_V1.1					
Software Version	V1.0					
Rating	DC 3.7V					
Result	PASS					

# **TEST REPORT**

Test Report No. :	G	TSR17060126-01	Jun. 27, 2017 Date of issue
Equipment under Test	:	Bluetooth receiver	
Model /Type	:	EB06	
Listed Models	:	EB07,EB08	
Applicant	:	Shenzhen Thousandshores	Technology Co., Ltd.
Address	:		, Seven-star Creative Square,No.2 ad, Bao'an District 28th, Shenzhen
Manufacturer	:	Shenzhen James Audio Tec	hnology CO.,Ltd
Address	:	4th Floor, A-building, No.2 Gu Guanlan Town, Longhua New	iyuan Road,Guihua Community, District, Shenzhen China

Test Result:	PASS
--------------	------

The test report merely corresponds to the test sample. It is not permitted to copy extracts of these test result without the written permission of the test laboratory.

# 1. <u>TEST STANDARDS</u>

The tests were performed according to following standards:

<u>FCC Rules Part 15.247</u>: Frequency Hopping, Direct Spread Spectrum and Hybrid Systems that are in operation within the bands of 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz. <u>ANSI C63.10-2013</u>: American National Standard for Testing Unlicensed Wireless Devices <u>KDB558074 D01 V04</u>: Guidance for Performing Compliance Measurements on Digital Transmission Systems (DTS) Operating Under §15.247.

# 2. <u>SUMMARY</u>

# 2.1. General Remarks

Date of receipt of test sample	:	Jun.14, 2017
Testing commenced on	:	Jun.14, 2017
Testing concluded on	:	Jun. 27, 2017

# 2.2. Product Description

Name of EUT	Bluetooth receiver				
Trade Mark	/				
Model Number	EB06				
List Model	EB07,EB08				
FCC ID	2ALNA-EB06				
Antenna Type	Internal Antenna				
Bluetooth FCC Operation frequency	2402MHz-2480MHz				
Bluetooth Modulation	GFSK				
Bluetooth	Supported BT4.0				
Antenna gain	-0.69dBi				
Remark: The products are identical in interior structure, electrical circuits and components, just model names are different.					

# 2.3. Equipment Under Test

## Power supply system utilised

Power supply voltage	:	0	230V / 50 Hz	0	120V / 60Hz
		0	12 V DC	0	24 V DC
		•	Other (specified in blank bel	ow	)

<u>DC 3.7V</u>

# 2.4. Short description of the Equipment under Test (EUT)

This is a Bluetooth receiver.

For more details, refer to the user's manual of the EUT.

## 2.5. EUT operation mode

The Applicant provides communication tools software to control the EUT for staying in continuous transmitting (Duty Cycle more than 98%) and receiving mode for testing .There are 40 channels provided to the EUT. Channel 00/19/39 was selected to test.

Channel	Frequency(MHz)	Channel	Frequency(MHz)
0	2402	20	2442
1	2404	21	2444
2	2406	22	2446
3	2408	23	2448
4	2410	24	2450
5	2412	25	2452
6	2414	26	2454
7	2416	27	2456
8	2418	28	2458
9	2420	29	2460
10	2422	30	2462
11	2424	31	2464
12	2426	32	2466
13	2428	33	2468
14	2430	34	2470
15	2432	35	2472
16	2434	36	2474
17	2436	37	2476
18	2438	38	2478
19	2440	39	2480

# 2.6. Block Diagram of Test Setup

# 2.7. Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for FCC ID: 2ALNA-EB06 filing to comply with Section 15.247 of the FCC Part 15, Subpart C Rules.

## 2.8. EUT configuration

The following peripheral devices and interface cables were connected during the measurement:

• - supplied by the manufacturer

 $\odot\,$  - Supplied by the lab

0 /	M/N:	/
	Manufacturer:	/

## 2.9. Modifications

No modifications were implemented to meet testing criteria.

# 3. <u>TEST ENVIRONMENT</u>

## 3.1. Address of the test laboratory

#### Shenzhen Global Test Service Co.,Ltd.

1F, Building No. 13A, Zhonghaixin Science and Technology City, No.12,6 Road, Ganli Industrial Park, Buji Street, Longgang District, Shenzhen, Guangdong

#### Shenzhen CTL Testing Technology Co., Ltd.

1/F.-A, Baisha Technology Park, No.3011, Shahexi Road, Nanshan District, Shenzhen, Guangdong, China

### 3.2. Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

## FCC-Registration No.: 964637

Shenzhen Global Test Service Co.,Ltd EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 964637, Jul 24, 2015.

## CNAS-Lab Code: L8169

Shenzhen Global Test Service Co.,Ltd. has been assessed and proved to be in compliance with CNAS-CL01 Accreditation Criteria for Testing and Calibration Laboratories (identical to ISO/IEC 17025: 2005 General Requirements) for the Competence of Testing and Calibration Laboratories. Date of Registration: Dec. 11, 2015. Valid time is until Dec. 10, 2018.

## FCC-Registration No.: 970318

Shenzhen CTL Testing Technology Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 970318, December 19, 2013.

## 3.3. Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

Temperature:	15-35 ° C
Humidity:	30-60 %
Atmospheric pressure:	950-1050mbar

# 3.4. Test Description

Test Specification clause	Test case	Test Mode	Test Channel	Reco In Re		Pass	Fail	NA	NP	Remark
§15.247(b)(4)	Antenna gain	GFSK	⊠ Lowest ⊠ Middle ⊠ Highest	GFSK	⊠ Lowest ⊠ Middle ⊠ Highest					complies

§15.209(a)	TX spurious Emissions radiated < 30 MHz	GFSK	-/-	GFSK	-/-	$\boxtimes$				complies
§15.107(a) §15.207	Conducted Emissions < 30 MHz	GFSK	-/-	GFSK	-/-					complies

Remark:

1. The measurement uncertainty is not included in the test result.

2. NA = Not Applicable; NP = Not Performed

# 3.5. Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16 - 4 "Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements" and is documented in the Shenzhen Global Test Service Co.,Ltd. quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for Shenzhen GTS laboratory is reported:

Test	Range	Measurement Uncertainty	Notes
Radiated Emission	30~1000MHz	4.10 dB	(1)
Radiated Emission	1~18GHz	4.32 dB	(1)
Radiated Emission	18-40GHz	5.54 dB	(1)
Conducted Disturbance	0.15~30MHz	3.12 dB	(1)

(1) This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

# 3.6 Fauinments Used during the Test

Note: The Cal.Interval was one year.

# 4. TEST CONDITIONS AND RESULTS

## 4.1. AC Power Conducted Emission

#### **TEST CONFIGURATION**

#### **TEST PROCEDURE**

1 The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10-2013.

2 Support equipment, if needed, was placed as per ANSI C63.10-2013

3 All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10-2013

4 The EUT received DC 5V power, the adapter received AC120V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.

5 All support equipments received AC power from a second LISN, if any.

6 The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.

7 Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.

8 During the above scans, the emissions were maximized by cable manipulation.

#### **AC Power Conducted Emission Limit**

For intentional device, according to § 15.207(a) AC Power Conducted Emission Limits is as following :

	Limit (dBuV)						
Frequency range (MHz)	Quasi-peak	Average					
0.15-0.5	66 to 56*	56 to 46*					
0.5-5	56	46					
5-30	60	50					
* Decreases with the logarithm of the frequent	CV.						

#### **TEST RESULTS**

Remark: This device is supplied power by car charger, so this test is not applicable.

# 4.2. Radiated Emission

### **TEST CONFIGURATION**

Frequency range 9 KHz – 30MHz

Frequency range 30MHz - 1000MHz

Frequency range above 1GHz-25GHz

#### TEST PROCEDURE

- 1. The EUT was placed on a turn table which is 0.8m above ground plane when testing frequency range 9 KHz –1GHz;the EUT was placed on a turn table which is 1.5m above ground plane when testing frequency range 1GHz 25GHz.
- 2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0° to 360° to acquire the highest emissions from EUT.
- 3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 4. Repeat above procedures until all frequency measurements have been completed.
- 5. The EUT minimum operation frequency was 32.768KHz and maximum operation frequency was 2480MHz.so radiated emission test frequency band from 9KHz to 25GHz.
- 6. The distance between test antenna and EUT as following table states:

Test Frequency range	Test Antenna Type	Test Distance
9KHz-30MHz	Active Loop Antenna	3
30MHz-1GHz	Ultra-Broadband Antenna	3
1GHz-18GHz	Double Ridged Horn Antenna	3
18GHz-25GHz	Horn Anternna	1

7. Setting test receiver/spectrum as following table states:

Test Frequency range	Test Receiver/Spectrum Setting	Detector			
9KHz-150KHz	RBW=200Hz/VBW=3KHz,Sweep time=Auto	QP			
150KHz-30MHz	RBW=9KHz/VBW=100KHz,Sweep time=Auto	QP			
30MHz-1GHz	z RBW=120KHz/VBW=1000KHz,Sweep time=Auto				
1GHz-40GHz	Peak Value: RBW=1MHz/VBW=3MHz, Sweep time=Auto Average Value: RBW=1MHz/VBW=10Hz, Sweep time=Auto	Peak			

#### Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor(if any) from the measured reading. The basic equation with a sample calculation is as follows:

#### FS = RA + AF + CL - AG

Where FS = Field Strength	CL = Cable Attenuation Factor (Cable Loss)					
RA = Reading Amplitude	AG = Amplifier Gain					
AF = Antenna Factor						

Transd=AF +CL-AG

#### **RADIATION LIMIT**

For intentional device, according to § 15.209(a), the general requirement of field strength of radiated emission from intentional radiators at a distance of 3 meters shall not exceed the following table. According to § 15.247(d), in any 100kHz bandwidth outside the frequency band in which the EUT is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the100kHz bandwidth within the band that contains the highest level of desired power.

The pre-test have done for the EUT in three axes and found the worst emission at position shown in test setup photos.

Frequency (MHz)	Distance (Meters)	Radiated (dBµV/m)	Radiated (µV/m)		
0.009-0.49	3	20log(2400/F(KHz))+40log(300/3)	2400/F(KHz)		
0.49-1.705	3	20log(24000/F(KHz))+ 40log(30/3)	24000/F(KHz)		
1.705-30	3	20log(30)+ 40log(30/3)	30		
30-88	3	40.0	100		
88-216	3	43.5	150		
216-960	3	46.0	200		
Above 960	3	54.0	500		

#### TEST RESULTS

#### Test site: Shenzhen CTL Testing Technology Co., Ltd.

#### For 9KHz to 30MHz

#### **REMARKS**:

- 1. Emission level (dBuV/m) =Raw Value (dBuV)+Correction Factor (dB/m)
- Correction Factor (dB/m) = Antenna Factor (dB/m)+Cable Factor (dB)-Pre-amplifier Factor
   Margin value = Limit value- Emission level.
   -- Mean the PK detector measured value is below average limit.
   The other emission levels were very low against the limit.

### 4.3. Maximum Peak Output Power

#### **TEST CONFIGURATION**

#### TEST PROCEDURE

According to KDB558074 D01 DTS Measurement Guidance Section 9.1 Maximum peak conducted output power, 9.1.2. and Average conducted output power, 9.2.3.1.

The maximum peak conducted output power may be measured using a broadband peak RF power meter. The power meter shall have a video bandwidth that is greater than or equal to the DTS bandwidth and shall utilize a fast-responding diode detector.

The maximum Average conducted output power may be measured using a wideband RF power meter with a thermocouple derector or equivalent. The power meter shall have a video bandwidth that is greater than or equal to the DTS bandwidth and shall utilize a fast-responding diode detector.

#### LIMIT

The Maximum Peak Output Power Measurement is 30dBm.

#### TEST RESULTS

Туре	Channel	Peak Output power (dBm)	Average Output power (dBm)	Limit (dBm)	Result
	0	-5.27	-6.19		
GFSK	19	-5.36	-6.27	30	Pass
	39	-5.41	-6.33

## 4.4. Power Spectral Density

### **TEST CONFIGURATION**

### TEST PROCEDURE

1.Use this procedure when the maximum peak conducted output power in the fundamental emission is used to demonstrate compliance.

2.Set the RBW =3 kHz.

3.Set the VBW =10 KHz.

4.Set the span to 1.5 times the DTS channel bandwidth.

5.Detector = peak.

6.Sweep time = auto couple.

7.Trace mode = max hold.

8. Allow trace to fully stabilize.

9.Use the peak marker function to determine the maximum power level.

10.If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.

11. The resulting peak PSD level must be 8 dBm.

#### LIMIT

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

#### TEST RESULTS

Туре	Channel	Power Spectral Density (dBm/3KHz)	Limit (dBm/3KHz)	Result	
	0	-21.522			
GFSK	19	-19.956	8.00	Pass	
	39	-21.453			

## 4.5. 6dB Bandwidth

#### **TEST CONFIGURATION**

### TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with RBW=100 KHz and VBW=300KHz. The 6dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 6dB. According to KDB558074 D01 for one of the following procedures may be used to determine the modulated DTS device signal bandwidth.

- 1. Set RBW = 100 kHz.
- 2. Set the video bandwidth (VBW)  $\geq$  3 RBW.
- 3. Detector = Peak.
- 4. Trace mode = max hold.
- 5. Sweep = auto couple.
- 6. Allow the trace to stabilize.

7. Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

#### <u>LIMIT</u>

For digital modulation systems, the minimum 6 dB bandwidth shall be at least 500 kHz

#### TEST RESULTS

Туре	Channel	6dB Bandwidth (KHz)	Limit (KHz)	Result	
	0	685.0			
GFSK	19	671.4	≥500	Pass	
	39	665.4			

# 4.6. Band Edge Compliance of RF Emission

#### **TEST REQUIREMENT**

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.205(a).

### **TEST CONFIGURATION**

#### TEST PROCEDURE

- 1. The EUT was placed on a turn table which is 1.5m above ground plane.
- 2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0° to 360° to acquire the highest emissions from EUT.
- 3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 4. Repeat above procedures until all frequency measurements have been completed..
- 5. The distance between test antenna and EUT was 3 meter:
- 6. Setting test receiver/spectrum as following table states:

υ.									
	Test Frequency range	Test Receiver/Spectrum Setting	Detector						
	1GHz-40GHz	Peak Value: RBW=1MHz/VBW=3MHz,							
		Sweep time=Auto	Peak						
		Average Value: RBW=1MHz/VBW=10Hz,	reak						
		Sweep time=Auto							

### LIMIT

Below -20dB of the highest emission level in operating band.

Radiated emissions which fall in the restricted bands, as defined in § 15.205(a), must also comply with the radiated emission limits specified in § 15.209(a)

## 4.7. Spurious RF Conducted Emission

### **TEST CONFIGURATION**

#### TEST PROCEDURE

The Spurious RF conducted emissions compliance of RF radiated emission should be measured by following the guidance in ANSI C63.10-2013 with respect to maximizing the emission by rotating the EUT, measuring the emission while the EUT is situated in three orthogonal planes (if appropriate), adjusting the measurement antenna height and polarization etc. Set RBW=100kHz and VBW= 300KHz to measure the peak field strength , and mwasure frequeny range from 9KHz to 25GHz.

#### <u>LIMIT</u>

1. Below -20dB of the highest emission level in operating band.

2. Fall in the restricted bands listed in section 15.205. The maximum permitted average field strength is listed in section 15.209.

3.For below 30MHz,For 9KHz-150kHz,150K-10MHz,We use the RBW 1KHz,10KHz, So the limit need to calculated by "10lg(BW1/BW2)". for example For9KHz-150kHz,RBW 1KHz, The Limit= the highest emission level-20-10log(100/1)= the highest emission level-40.

#### TEST RESULTS

Remark: The measurement frequency range is from 9KHz to the 10<sup>th</sup> harmonic of the fundamental frequency. The lowest, middle and highest channels are tested to verify the spurious emissions and bandege measurement data.

## 4.8. Antenna Requirement

#### **Standard Applicable**

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.247 (c), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

#### Antenna Information

The antenna is layout on PCB board, The directional gains of antenna used for transmitting is -0.69dBi.
