Part Names and Function

Master station

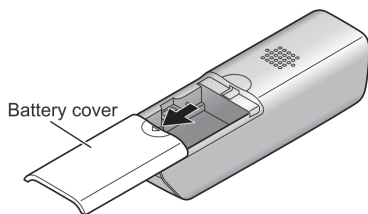

⚠ Caution

- Loud sounds can occur suddenly, so keep this section away from your ear.

Charging the handset

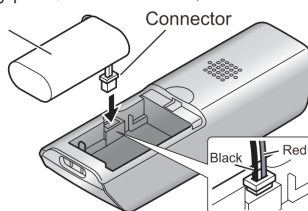

Charge the handset for 16 hours before using it for the first time.

1 Open the battery cover

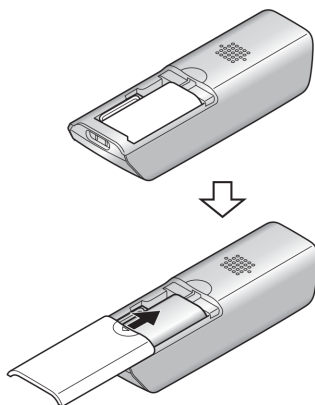

2 Connect the connector of the battery pack to the connector terminal inside the battery cover

Battery pack (Device No.:WLW-BT.E)

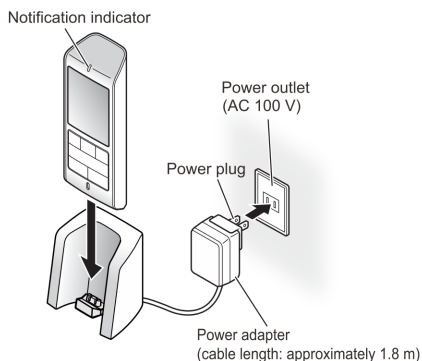

3 Set the battery pack, and then close the battery cover

- Take care not to trap the connector of the battery pack.

4 Place the handset on the charging stand

- The notification indicator switches on red, which indicates a charging state.
- After sufficient charging, the notification indicator switches off.

Notice

- Charging time increases in the following situations.
 - When the usage environment temperature or power voltage is low
 - When the handset was used during charging
 - When the reception status of this unit is "Out of range"
- **When the handset is not in use, always set it on the charging stand. Overcharging does not occur even when the handset is always on the stand.**
- The notification indicator may not switch off immediately when this unit is removed from the charging stand.
- Immediately after the battery pack is installed, the displayed remaining battery power may be lower than the actual value.
- If power is supplied to the handset, "AIPHONE" is displayed on the screen, and the notification indicator switches on red.

Request

- Only use the designated battery WLW-BT.E for this device.
- Do not peel off the vinyl cover of the battery pack.
- If this unit will be removed from the charging stand or the power adapter will be unplugged for one week or more, remove the connector, and then remove the battery pack. (This maintains the battery pack performance and prevents consumption of the battery pack.)
