**FCC Rule: Part 2.1053, Part 22.917(a)**

**ICED: RSS-GEN 6.13, RSS-132 5.5**

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least  $43 + 10 \log(P \text{ watts})$  dB.

Both modules of the EUT were set to continuous transmission mode using the maximum transmit power. Both modules were operating simultaneously. GSM 850 and WCDMA II bands tested with Bluetooth in high channel.

**Results:**

Pre measurements were made at the frequency range 30 MHz to 8500 MHz at a distance of 3 m. No final measurements were made because there were no transmission emissions near the limit (-13 dBm). Margins were more than 20 dB to the limit.
