1. GENERAL INFORMATION

1.1 Test Facility

Test laboratory and address

KOSTEC Co., Ltd. 128(175-20,Annyeong-dong)406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea

Registration information

KOLAS No. : 232 FCC Designation No. : KR0041 IC Registration Site No. : 8305A-1

1.2 Location

1.3 Revision History of test report

| Rev | Revisions | Revisions Effect page Reviewed | | Date | |
|-----|---------------------------------|--------------------------------|--------------------|---------------|--|
| - | Initial issue | All | Gyeong Hyeon, Park | 2017. 05. 22. | |
| 1 | Revised IC registration site no | 3 | Gyeong Hyeon, Park | 2017. 06. 08. | |

2. EQUIPMENT DESCRIPTION

The product specification described herein was declared by manufacturer. And refer to user's manual for the details.

| Equipment Name | Bluetooth module |
|-----------------------|---|
| Model No | TCM3901 |
| Usage | Bluetooth module |
| Serial Number | Proto type |
| Modulation type | FHSS |
| Emission Type | F1D/G1D |
| Maximum output power | 2.01 dBm |
| Operated Frequency | 2 402 MHz ~ 2 480 MHz |
| Channel Number | 79 |
| Operation temperature | -10 °C ~ 55 °C |
| Power Source | DC 3.3 V |
| Antenna Description | PCB antenna embed in PCB of EUT, max gain :1.5 dBi |
| Remark | The device was operating at its maximum output power for all measurements. The radiation measurements are performed in X, Y, Z axis positioning. Only the worst case (X) is shown in the report. The above DUT's information was declared by manufacturer. Please refer to the specifications or user manual for more detailed description. |
| FCC ID | 2ALS3-3901 |
| IC | 22661-3901 |

3. SYSTEM CONFIGURATION FOR TEST

3.1 Characteristics of equipment

Bluetooth module

3.2 Used peripherals list

| Description | Model No. | Serial No. | Manufacture | Remark |
|-------------|--------------|------------|-------------|--------------|
| Notebook | BCM-1063 | 2Z7S1Z1 | Dell Inc | |
| Adapter | DA65NM111-00 | None | Dell Inc | For notebook |

3.3 Product Modification

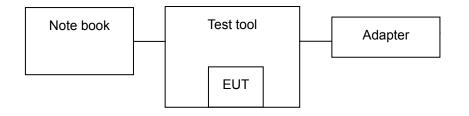

N/A

3.4 Operating Mode

Constantly transmitting with a modulated carrier at maximum power on the low, middle and high channels.

3.5 Test Setup of EUT

The measurements were taken in continuous transmit mode using the test mode which controlled by teraterm. The test command and the test Jig and cables were provided by the applicant.

3.6 Parameters of Test Software Setting

During testing, Channel & Power Controlling Software provided by the customer was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product.

TX Power setting value during test

| Dand | TX Power setting value | | | | |
|--------------|------------------------|-----------|---------|--|--|
| Band | Low CH | Middle CH | High CH | | |
| 2.4 GHz band | 0 | 0 | 0 | | |

4. SUMMARY TEST RESULTS

| Description of Test | FCC Rule | IC Rule | Reference Clause | Used | Test Result | | |
|---|--|----------------|---------------------|-------------|-------------|--|--|
| Peak Output Power | § 15.247(b)(1) | RSS-247, 5.4.2 | Clause 5.1 | \boxtimes | Compliance | | |
| 20 dB Bandwidth | § 15.247(a)(1) | RSS-247, 5.1.1 | Clause 5.2 | | Compliance | | |
| Channel Separation | § 15.247(a)(1) | RSS-247, 5.1.2 | Clause 5.3 | \boxtimes | Compliance | | |
| Number of Hopping Channels | § 15.247(a)(1) | RSS-247, 5.1.4 | Clause 5.4 | | Compliance | | |
| Time of Occupancy | § 15.247(a)(1) | RSS-247, 5.1.2 | Clause 5.5 | \boxtimes | Compliance | | |
| Conducted Spurious Emissions | § 15.247(d) | RSS-247, 5.5 | Clause 5.6 | | Compliance | | |
| Radiated Spurious Emissions | § 15.247(d), § 15.209, and § 15.205 | RSS-GEN, 8.8 | Clause 5.7 | | Compliance | | |
| Antenna Requirement | § 15.203 | - | Clause 5.8 | | Compliance | | |
| AC Power Conducted emissions | § 15.207 | RSS-GEN, 8.8 | Clause 5.9 | | Compliance | | |
| Compliance: The ELIT complice with the acceptial requirements in the standard | | | | | | | |

Compliance: The EUT complies with the essential requirements in the standard.

Not Compliance : The EUT does not comply with the essential requirements in the standard.

N/A : The test was not applicable in the standard.

Procedure Reference

FCC CFR 47, Part 15. Subpart C-15.247 DA 00-705 RSS-GEN Issue 4 RSS-247 Issue 2 ANSI C 63.10-2013

5. MEASUREMENT RESULTS

5.1 Peak Output Power

5.1.1 Standard Applicable [FCC §15.247(b)(1) / RSS-247 5.4.2]

For frequency hopping systems operating in the 2 400 ~ 2 483.5 MHz band employing at least 75 nonoverlapping hopping channels, and all frequency hopping systems in the 5 725 ~ 5 850 MHz band : 1 Watt. For all other frequency hopping systems in the 2400 ~ 2483.5 MHz band: 0.125 watts.

5.1.2 Test Environment conditions

• Ambient temperature : (24 ~ 25) °C • Relative Humidity : (49 ~ 55) % R.H.

5.1.3 Measurement Procedure

ANSI C63.10: 2013 and FCC Public Notice DA 00-705 Released March 30, 2000: Filing and Measurement Guidelines for Frequency Hopping Spread Spectrum Systems. The peak output power was measured using the marker to peak function of the spectrum analyzer.

The spectrum analyzer is set to the as follows :

- Span : approximately 5 times the 20 dB bandwidth
- RBW : > 20 dB bandwidth of the emission being measured
- VBW \geq RBW.
- Sweep time = auto
- Detector = peak.
- Trace mode = max hold.
- Allow trace to fully stabilize.
- Use the peak marker function to determine the maximum amplitude level.

5.1.4 Test setup

5.1.5 Measurement Result

BDR(GFSK)

| Channel | Frequency | Output Power | Limit | Toot Booulto |
|---------|-----------|--------------|-------|--------------|
| Channer | [MHz] | [dBm] | [dBm] | Test Results |

5.2 20 dB Bandwidth

5.2.1 Standard Applicable [FCC §15.247(a)(1) / RSS-247, 5.1.1]

Operation under the provisions of this Section is limited to frequency hopping and digitally modulated intentional radiators that comply with the following provisions:

(1) Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400–2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW. The system shall hop to channel frequencies that are selected at the system hopping rate from a pseudo randomly ordered list of hopping frequencies. Each frequency must be used equally on the average by each transmitter. The system receivers shall have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shall shift frequencies in synchronization with the transmitted signals.

5.2.2 Test Environment conditions

• Ambient temperature : (24 ~ 25) °C • Relative Humidity : (49 ~ 55) % R.H.

5.2.3 Measurement Procedure

ANSI C63.10: 2013 and FCC Public Notice DA 00-705 Released March 30, 2000: Filing and Measurement Guidelines for Frequency Hopping Spread Spectrum Systems.

1. The transmitter output (antenna port) was connected to the spectrum analyzer in peak hold mode.

2. The bandwidth of the fundamental frequency was measured by spectrum analyzer with RBW \geq 1 % of the 20 dB bandwidth and VBW \geq RBW.

3. Measured the spectrum width with power higher than 20 dB below carrier.

5.3 Channel Separation

5.3.1 Standard Applicable [FCC §15.247(a)(1) / RSS-247, 5.1.2]

Operation under the provisions of this Section is limited to frequency hopping and digitally modulated intentional radiators that comply with the following provisions:

(1) Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400–2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW. The system shall hop to channel frequencies that are selected at the system hopping rate from a pseudo randomly ordered list of hopping frequencies. Each frequency must be used equally on the average by each transmitter. The system receivers shall have input bandwidths that match the hopping channel bandwidths of their corresponding transmitters and shall shift frequencies in synchronization with the transmitted signals.

5.3.2 Test Environment conditions

• Ambient temperature : (24 ~ 25) $\,^\circ\!\!\mathbb{C}\,$ • Relative Humidity : (49 ~ 55) % R.H.

5.3.3 Measurement Procedure

ANSI C63.10: 2013 and FCC Public Notice DA 00-705 Released March 30, 2000: Filing and Measurement Guidelines for Frequency Hopping Spread Spectrum Systems.

- 1. The transmitter output (antenna port) was connected to the spectrum analyzer in peak hold mode.
- 2. The resolution bandwidth of 30 kHz and the video bandwidth of 100 kHz were used.
- 3. After the trace being stable, the reading value between the peak of the adjacent channels using the marker- Delta function was recorded as the measurement results.

The spectrum analyzer is set to the as follows :

- Span : wide enough to capture the peak of two adjacent channels
- RBW : ≥ 1% of the span
- VBW : ≥ RBW
- Sweep : auto
- Detector function : peak
- Trace : max hold

5.5 Time of Occupancy

5.5.1 Standard Applicable [FCC §15.247(a)(1) / RSS-247, 5.1.2]

(1)(iii) The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed.

5.5.2 Test Environment conditions

• Ambient temperature : (24 ~ 25) $^\circ$ C • Relative Humidity : (49 ~ 55) % R.H.

5.5.3 Measurement Procedure

ANSI C63.10: 2013 and FCC Public Notice DA 00-705 Released March 30, 2000: Filing and Measurement Guidelines for Frequency Hopping Spread Spectrum Systems.

The dwell time was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled. After used the marker-delta function to determine the dwell time.

5.5.4 Test setup

5.5.5 Measurement Result

| Burst width | per one hop (| ms) | Test | Results | |
|---------------|---------------|-------|-----------------|---------|------------|
| Τ) | īme slot) | | Dwell time (ms) | Limit | Result |
| | DH1 | 0.384 | 0.123 | ≤ 0.4 | Compliance |
| BDR(GFSK) | DH3 | 1.638 | 0.262 | ≤ 0.4 | Compliance |
| | DH5 | 2.899 | 0.309 | ≤ 0.4 | Compliance |
| | 2DH1 | 0.391 | 0.125 | ≤ 0.4 | Compliance |
| EDR(π/4DQPSK) | 2DH3 | 1.638 | 0.262 | ≤ 0.4 | Compliance |
| | 2DH5 | 2.899 | 0.309 | ≤ 0.4 | Compliance |
| | 3DH1 | 0.391 | 0.125 | ≤ 0.4 | Compliance |
| EDR(8DPSK) | 3DH3 | 1.626 | 0.260 | ≤ 0.4 | Compliance |
| | 3DH5 | 2.899 | 0.309 | ≤ 0.4 | Compliance |

Note:

DH1 Packet permit maximum 1600 / 79 / 2 hops per second in each channel (1 time slot RX, 1 time slot TX). DH3 Packet permit maximum 1600 / 79 / 4 hops per second in each channel (3 time slots RX, 1 time slot TX). DH5 Packet permit maximum 1600 / 79 / 6 hops per second in each channel (5 time slots RX, 1 time slot TX).

Therefore, dwell Time can be calculated as follows:

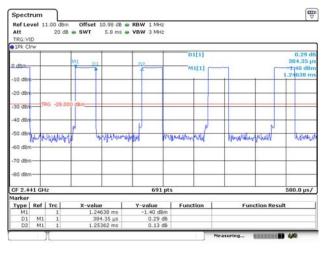

| Data Packet | Dwell Time(s) | | | | | | | | | |
|---------------|----------------------------------|--|--|--|--|--|--|--|--|--|
| DH1/2DH1/3DH1 | 1600/79/2*0.4*79*(MkrDelta)/1000 | | | | | | | | | |
| DH3/2DH3/3DH3 | 1600/79/4*0.4*79*(MkrDelta)/1000 | | | | | | | | | |
| DH5/2DH5/3DH5 | 1600/79/6*0.4*79*(MkrDelta)/1000 | | | | | | | | | |

5.6 Conducted Spurious Emissions (Band-edge)

5.6.1 Standard Applicable [FCC §15.247(d) / RSS-247, 5.5]

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 KHz bandwidth within the band that contains the highest level of the desired power, based on RF conducted.

5.6.2 Test Environment conditions

• Ambient temperature : (24 ~ 25) °C • Relative Humidity : (49 ~ 55) % R.H.

5.6.3 Measurement Procedure

(1) The transmitter output was connected to the spectrum analyzer through an attenuator.

(2) Conducted spurious emission the bandwidth of the fundamental frequency was measured by spectrum analyzer with RBW=100 KHz and VBW=300KHz.

(3) Below -20dB of the highest emission level in operating band.

5.6.4 Test setup

5.6.5 Measurement Result

5.7 Spurious RF Radiated emissions

5.7.1 Standard Applicable [FCC §15.247(d) / RSS-GEN, 8.8]

FCC

All other emissions outside these bands shall not exceed the general radiated emission limits specified in §15.209(a). And according to §15.33(a)(1), for an intentional radiator operates below 10 GHz, the frequency Range of measurements: to the tenth harmonic of the highest fundamental frequency or to 40 GHz, Whichever is lower. In addition, radiated emissions which fall in the restricted bands, as defined in Sec.15.205(a), must also comply with the radiated emission limits specified in Sec. 15.209(a)

IC

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided that the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of root-mean-square averaging over a time interval, as permitted under Section 5.4(4), the attenuation required shall be 30 dB instead of 20 dB. Attenuation below the general field strength limits specified in RSS-Gen is not required.

§15.205. Restrict Band of Operation for IC

5.7.2 Test Environment conditions

• Ambient temperature : (24 ~ 25) °C • Relative Humidity : (49 ~ 55) % R.H.

5.7.3 Measurement Procedure

The measurements procedure of the Spurious RF Radiated emissions is as following describe method.

1. The EUT was placed on the top of a rotating table (0.8 meters for below 1 GHz and 1.5 meters for above 1 GHz) above the ground at a 3 meter camber. The table was rotated 360 degree to determine the position of the highest radiation.

2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna master.

3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both Horizontal and vertical polarizations of the antenna are set to make the measurement. 4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotating table was turned from 0 - 360 degrees to find the maximum reading.

5. The measuring receiver was set to peak detector and specified bandwidth with max hold function.

6. Low, Middle and high channels were measured, and radiation measurements are performed in X, Y, Z axis

positioning. And found the worst axis position and only the test worst case mode is recorded in the report.

· The measurement results are obtained as described below:

Result($dB \mu M/m$) = Reading($dB \mu M$) + Antenna factor(dB/m)+ CL(dB) + other applicable factor (dB)

- The resolution bandwidth of test receiver/spectrum analyzer is 1 Ma and the video bandwidth is 3 Ma for RMS Average (Duty cycle < 98 %) for Average detection (AV) at frequency above 1 GHz, then the measurement results was added to a correction factor (10 log(1/duty cycle)).
- The resolution bandwidth of test receiver/spectrum analyzer is 1 M₂ and the video bandwidth is 10 Hz (Duty cycle ≥ 98 %) for Average detection (AV) at frequency above 1 GHz.
- According to §15.33 (a)(1), Frequency range of radiated measurement is performed the tenth harmonic.

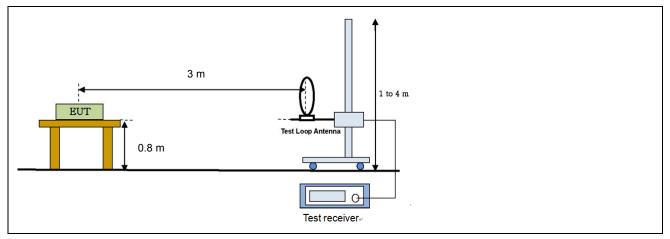

5.7.4 Measurement Uncertainty

Radiated Emission measurement: Below 1 GHz : 4.32 dB (CL: Approx 95 %, k=2) Above 1 GHz : 4.14 dB (CL: Approx 95 %, *k=2*)

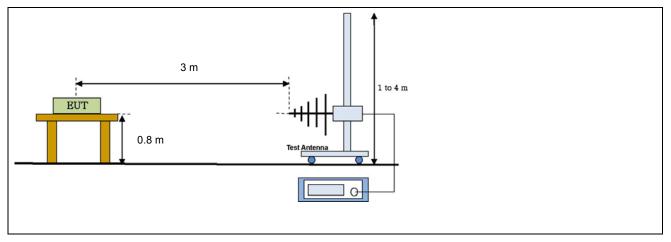

5.7.5 Test Configuration

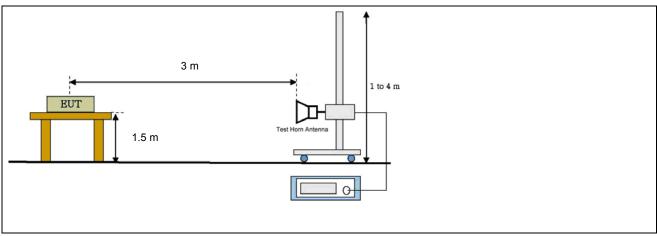

Radiated emission setup, Below 30 MHz

Radiated emission setup, Below 1 000 MHz

Radiated emission setup, Above 1 GHz

5.7.6 Measurement Result

After having pre-scan all modulation mode, found the GFSK modulation which it was worst case, so only the worst case's data on the test report.

Above 1 GHz

5.8 Antenna requirement

5.8.1 Standard applicable [FCC §15.203]

For intentional device, according to §15.203, an intentional radiator shall be designed to ensure that no antenna other than furnished by responsible party shall be used with the device.

The use of a permanently attached antenna or of an antenna that user a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section.

The manufacturer may design the unit so that broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

5.8.2 Antenna details

| Frequency Band | Antenna Type | Gain [dBi] | Results |
|----------------|---------------------|------------|------------|
| 2.4 GHz | PCB pattern antenna | 1.5 | Compliance |

5.9 AC Power Conducted emissions

5.9.1 Standard Applicable [FCC §15.207(a) / RSS-Gen 8.8]

For intentional radiator that is designed to be connected to the public utility(AC)power line, the radio frequency. Voltage that is conducted back onto the AC power line on any frequencies hopping mode within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a 50 μ H/50 ohms line Impedance stabilization network(LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between the frequency ranges.

§15.207 limits for AC line conducted emissions;

| Fragueney of Emission(ML) | Conducted | I Limit (dBµV) |
|--|------------|----------------|
| Frequency of Emission(M [™]) | Quasi-peak | Average |
| 0.15 ~ 0.5 | 66 to 56 * | 56 to 46 * |
| 0.5 ~ 5 | 56 | 46 |
| 5 ~ 30 | 60 | 50 |

* Decreases with the logarithm of the frequency

5.9.2 Test Environment conditions

• Ambient temperature : (24 ~ 25) °C • Relative Humidity : (49 ~ 55) % R.H.

5.9.3 Measurement Procedure

EUT was placed on a non- metallic table height of 0.8 m above the reference ground plane. Cables connected to EUT were fixed to cause maximum emission. Test was made with the antenna positioned in both the horizontal and vertical planes of polarization. The measurement antenna was varied in height above the conducting ground plane to obtain the Maximum signal strength.

5.9.4 Used equipment

| Equipment | Model No. | Serial No. | Manufacturer | Next cal date | Cal interval | Used |
|---------------|-----------|------------|-----------------|------------------|-----------------|-------------|
