1.2. Equipment Under Test (EUT) Description

| EUT Type: | F8L10GW LoRa Gateway | | | |
|-------------------|------------------------------|--|--|--|
| Serial No: | N/A, marked #1 by test site) | | | |
| Hardware Version: | V1.3 | | | |
| Software Version: | 20180927 | | | |

Note:

1. For a more detailed description, please refer to specification or user's manual supplied by the applicant and/or manufacturer

1.3. Related Submittal(s)/Grant(s

FCC Part 15.249 DXX submissions with FCC ID: 2ALUW-F8L10GW FCC Part 15.247 DTS submissions with FCC ID: 2ALUW-F8L10GW

2.1. Applied Reference Documents

The objective of the report is to perform testing according to 47 CFR Part 15 Subpart B:

| No. | Identity | Document Title |
|-----|----------------|-------------------------|
| 1 | 47 CFR Part 15 | Radio Frequency Devices |

Test detailed items/section required by FCC rules and results are as below:

| No. | Section | Description | Test Date | Test Engineer | Result |
|-----|---------|--------------------|------------|---------------|--------|
| 1 | 15.107 | Conducted Emission | 2018.11.18 | Jinxin Huang | PASS |
| 2 | 15.109 | Radiated Emission | 2018.11.20 | Jinxin Huang | PASS |

NOTE: The tests were performed according to the method of measurements prescribed in ANSI C63.4-2014.

2.2. EUT Setup and Operating Conditions

Frequency range was investigated: Conducted emission test: from 150KHz to 30MHz; Radiated emission test: from 30MHz to 6000MHz.

| Test Item | |
|-----------|--|
| Mode 1 : | EUT + PC WAN Link |
| | Note: EUT connects with the PC network port through the network(RJ45) cable, |
| | opens the data link of data packet transmission test software "TFGen", and opens the |
| | Windows command window to input the ping instruction. |

During the measurement, the environmental conditions were within the listed ranges:

| Temperature (°C): | 15 - 35 |
|-----------------------------|----------|
| Relative Humidity (%): | 30 - 60 |
| Atmospheric Pressure (kPa): | 86 - 106 |

3. 47 CFR Part 15B Requirements

3.1. Conducted Emission

3.1.1. Requirement

According to FCC section 15.107, the radio frequency voltage that is conducted back onto the AC power line on any frequency within the band 150kHz to 30MHz shall not exceed the limits in the following table, as measured using a 50μ H/50 Ω line impedance stabilization network (LISN).

| Frequency range | Conducted Limit (dBµV) | | | | |
|-----------------|------------------------|----------|--|--|--|
| (MHz) | Quasi-peak | Average | | | |
| 0.15 - 0.50 | 66 to 56 | 56 to 46 | | | |
| 0.50 - 5 | 56 | 46 | | | |
| 5 - 30 | 60 | 50 | | | |

NOTE:

a) The limit subjects to the Class B digital device.

b) The lower limit shall apply at the band edges.

c) The limit decreases linearly with the logarithm of the frequency in the range 0.15 - 0.50MHz.

3.1.2. Test Setup

Please refer to Annex A for the photographs of the Test Configuration.

The EUT is placed on a 0.8m high insulating table, which stands on the grounded conducting floor, and keeps 0.4m away from the grounded conducting wall. The EUT is connected to the power mains through a LISN which provides $50\Omega/50\mu$ H of coupling impedance for the measuring instrument. A Pulse Limiter is used to protect the measuring instrument. The factors of the whole test system are calibrated to correct the reading.

The power strip or extension cord has been investigated to make sure that the LISN integrity in maintained with respect to the impedance characteristics as prescribed in ANSI C63.4-2014 at Clause 4.3.

3.1.3. **Test Result**

The maximum conducted interference is searched using Peak (PK), Quasi-peak (QP) and Average (AV) detectors; the emission levels more than the AV and QP limits, and that have narrow margins from the AV and QP limits will be re-measured with AV and QP detectors. Tests for both L phase and N phase lines of the power mains connected to the EUT are performed. All test modes are considered, refer to recorded points and plots below.

A. Test Plot and Suspicious Points:

| Frequency | QuasiPeak | Average | Limit | Margin | Line | Corr. | Verdict |

3.2. Radiated Disturbance

3.2.1. Requirement

According to FCC section 15.109 (a), the field strength of radiated emissions from unintentional radiators at a distance of 3 meters shall not exceed the following values:

| Frequency | Field Strength Limitation at 3m Measurement Distan | | | |
|---------------|--|-----------|--|--|
| range (MHz) | (µV/m) | (dBµV/m) | | |
| 30.0 - 88.0 | 100 | 20log 100 | | |
| 88.0 - 216.0 | 150 | 20log 150 | | |
| 216.0 - 960.0 | 200 | 20log 200 | | |
| Above 960.0 | 500 | 20log 500 | | |

As shown in FCC section 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector. When average radiated emission measurements are specified in this part, including emission measurements below 1000MHz, there also is a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20dB above the maximum permitted average limit for the frequency being investigated unless a different peak emission limit is otherwise specified in the rules.

Note:

- 1) The tighter limit shall apply at the boundary between two frequency range.
- 2) Limitation expressed in dB μ V/m is calculated by 20log Emission Level(μ V/m).

3.2.2. Frequency range of measurement

According to 15.33(b)(1), the frequency range of radiated measurement for the EUT is listed in the following table:

| Highest frequency generated or used in the device or on which the device operates or tunes (MHz) | Upper frequency of measure- ment range (MHz) |
|---|--|
| Below 1.705 1.705–108 108–500 500–1000 Above 1000 | 30. 1000. 2000. 5000. 5th harmonic of the highest frequency or 40 GHz, whichever is lower. |

3.2.3. Test Setup

1) For radiated emissions from 30MHz to 1GHz

2) For radiated emissions above 1GHz

Kehu-Morlab
Test LaboratoryXIAMEN MORLAB COMMUNICATIONS TECHNOLOGY Co., Ltd.
Unit 101, No.1732 Gangzhong Road, Xiamen Area, Pilot Free Trade Zone (Fujian), P. R. China

The test is performed in a 3m Semi-Anechoic Chamber; the antenna factor, cable loss and so on of the site (factors) is calculated to correct the reading. The EUT is placed on a 0.8m high insulating Turn Table, and keeps 3m away from the Test Antenna, which is mounted on avariable-height antenna master tower.

For the test Antenna:

In the frequency range above 30MHz, Bi-Log Test Antenna (30MHz to 1GHz) and Horn Test Antenna (above 1GHz) are used. Test Antenna is 3m away from the EUT. Test Antenna height is varied from 1m to 4m above the ground to determine the maximum value of the field strength. The emission levels at both horizontal and vertical polarizations should be tested.

3.2.4. Test Result

The maximum radiated emission is searched using PK, QP and AV detectors; the emission levels more than the limits, and that have narrow margins from the limits will be re-measured with AV and QP detectors. Both the vertical and the horizontal polarizations of the Test Antenna are considered to perform the tests. All test modes are considered, refer to recorded points and plots below.

The amplitude of emissions (6GHz-12.5GHz) which are attenuated more than 20 dB below the permissible value need not be reported.

Note: All radiated emission tests were performed in X, Y, Z axis direction, and only the worst axis test condition was recorded in this test report.

Annex A Test Uncertainty

The uncertainty is calculated using the methods suggested in the "Guide to the Expression of Uncertainty in Measurement" (GUM) published by ISO.

Uncertainty of Conducted Emission Measurement

| Measuring Uncertainty for | 9kHz-150kHz | 3.10 dB |
|---------------------------|--------------|---------|
| a Level of Confidence of | 150kHz-30MHz | 2.61dB |
| 95%(U=2Uc(y)) | | |

Uncertainty of Radiated Emission Measurement

| Measuring Uncertainty for | 30MHz-200MHz | 3.87dB |
|---------------------------|----------------|--------|
| a Level of Confidence of | 200MHz-1000MHz | 4.07dB |
| 95%(U=2Uc(y)) | 1GHz-6GHz | 4.25dB |
| | 6GHz-18GHz | 5.00dB |

Annex B Testing Laboratory Information

1. Identification of the Responsible Testing Laboratory
