Re: Advanced Compliance Solutions (NVLAP Lab Code: 200101)

Dear Mr. Briggs,

With the approval of Wei Li, Advanced Compliance Solutions (ACS) (NVLAP Lab Code 200101) successfully expanded their scope of accreditation on January 9, 2018 to include *FCC Report and Order ET Docket 98-153 (FCC 02-48) - Procedures in IDB 20021108-001 with 47 CFR FCC Part 15, Subpart F: Ultra-Wideband Operation*.

The test report UL Verification Services has inquired for is report #0048-171114-02. The testing was conducted in November 2017 and finalized on January 15, 2018. NVLAP conducted an investigation with technical support from a NVLAP assessor independent from the previous assessment process to. The technical investigation covered the test report, personnel training records, test equipment records, and the test lab's procedures ACS indicated were used to perform the test.

The investigation found that the test equipment calibration appeared to be current, the personnel training appeared to have occurred before the testing took place in November 2017, and the last revision of the test procedure was dated before the testing took place in November 2017.

While providing UL these findings, NVLAP in no way implies a post-dated accreditation for the testing in question. We reiterate that ACS achieved accreditation for *FCC Report and Order ET Docket 98-153 (FCC 02-48) - Procedures in IDB 20021108-001 with 47 CFR FCC Part 15, Subpart F: Ultra-Wideband Operation* on January 9, 2018.

Sincerely,

Brad Moore
EMC/Telecom Accreditation Program Manager
