

Before installation

Read the following guidelines before installation:

- Avoid covering the front of the camera to ensure the view can be captured completely. One third of the lamp needs be exposed outside of the fixture to allow enough view and light.
- Keep the power of the unit and the Router on in order to monitor through the use of APP remotely.

Equipment requirement:

- To make sure the APP to operate smoothly, it is recommended to use smart device with **quad-core processor** with **2G RAM** and up.
- Support **iOS 8.0** and up · **Android 4.4** and up.
- Support **WPA** and **WPA2**, WEP is not supported.
- Network bandwidth upload speed is **10Mb** or above, to keep the system stability.
- Disable Router firewall before use.
- Please set the Router to a fixed channel, to improve Internet stability.
- Ensure the Wi-Fi signal is strong and close to desired socket location. (Within 10 meter distance or in the same room)

Friendly reminders

If you buy more than one IP C.M. Lamp, it's highly recommended to install one lamp at one time, and write down the position or unit name on the device card to avoid mixing up the unit UID.

Connection step

Step 1

Download APP based on your operating system

Step 2

Turn on unit power

45 seconds later lamp initialization complete
(lamp will flash one time, brightness set to 50%)
Start connecting the unit to your smart device.

Step 3

Add new unit

Click to +
add new unit

Step 4

Choose the connection way

If there is WiFi in the room, choose [Router connection](#) (page 3)

If there is no WiFi in the room, choose [Direct connection](#) (page 4)

Additional user, choose [Added device connection](#) (page 5)

Router connection step

Turn on WiFi
Connect the router
near the unit

Click
[Add new unit]

Enter Wifi password
click [Continue]

Choose the unit
you wish to connect

Wait for the connection
to establish

After connection successfully
Name the unit
Enter device password

After completion
enter to the control interface
automatically.

Notice If connection fail, reboot the unit and the router before re-connect.
If connection fail, check smart device WiFi connect the router or not.
Within 10 meter distance or in the same room

Direct connection step

Keep within 10 meter of unit or in the same room while connecting

Turn on WiFi

Connect [CM Lamp_xxxxxxx]

Click

[unit has been added]

Click the QR Code icon
scan your unit QR Code

UID and Password will be
input automatically

Click 

Connection completed

Click  and go
back to unit list

The icon in front of the unit name :

-  Connected
-  Not connected

Notice If unit connected with router, C.M. Lamp_xxxx will hide, couldn't be search, after turn the router off, or change the unit site, out of router coverage, C.M. Lamp_xxxx can be detection again. After connection, change the unit password, into [setting]-[unit password]

Added unit connection step

This connection way is for additional user

Keep power on

Turn on WiFi

Connect the router near the unit

Click

[unit has been added]

Click the QR Code icon
scan your unit QR Code

UID and Password will be
input automatically

Click 

Connection completed

Click  and go
back to unit list

The icon in front of the unit name :

-  Connected
-  Not connected

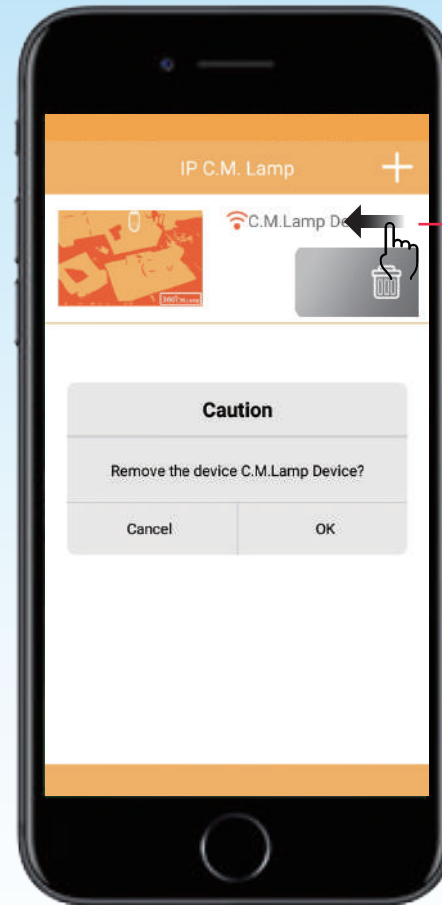

Notice After connection, change the unit password, into [setting]-[unit password]

Common problems

1. Why the router connection always fail?

ans. Please check the WiFi is connected to the correct router, and keep the connection stable.

2. How to deal with unit disconnection?

ans. First, check the WiFi connection status, if it still fail, reboot the device, router and the app.

3. If I forget the unit password?

ans.If user forget the unit password or change other router connection, reset the unit.

4. How many smart device can connect with a C.M. Lamp?

ans.It depends on Network environment.

5.How many C.M. Lamp can connect to a smart device?

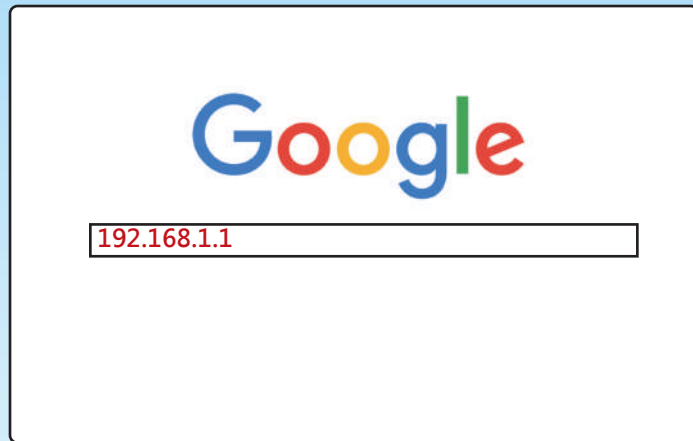

ans. Unlimited.

6. How to reset unit?

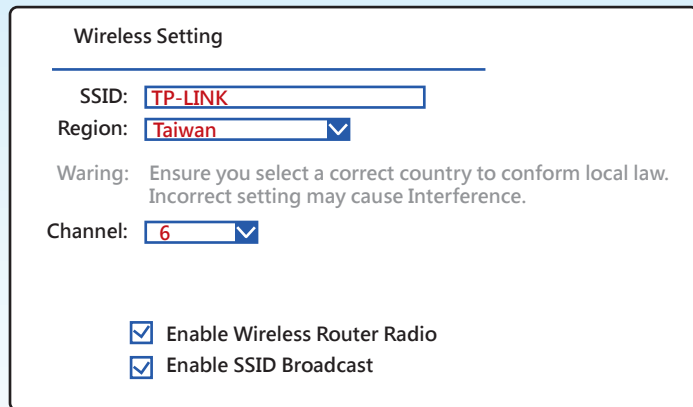

ans.[Setting]-[Unit detail]-[Reset]

Router channel setting

Please set the Router to a **fixed channel**, to improve Internet stability.

- Step1 Open a web page,enter router IP URL(preset is 192.168.1.1)
- Step2 Enter the user name and password(preset name and password is [admin])
- Step3 Click on left side[wireless]-[wireless setting]

- Step4 Wireless setting (take TP-LINK for example · FIG.)
SSID : enter router name
Region : select your country .
Channel : choose the wireless channel.
(Enable Wireless Router Radio/Enable SSID Broadcast this two option always enable)

Step5 Click [Save] to save setting ◦

Notice : If there is too many wireless signal on the same channel, change to another one to improve WiFi signal.

參考網址: <http://www.tp-link.tw/faq-78.html>

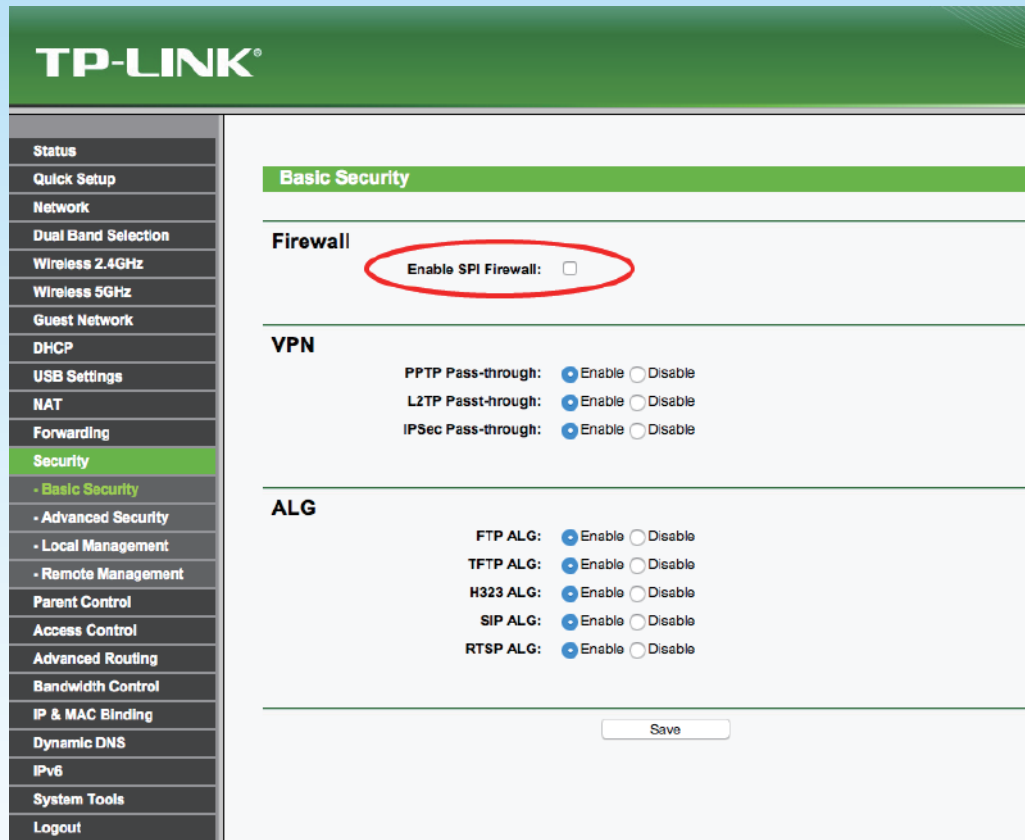

Android user,download [Wifi Analyzer]app
accroding to network environment ,
choose the proper wireless channel.

iOS user,download [Airport]app
accroding to network environment ,
choose the proper wireless channel.

Firewall setting

Take TP-LINK for example

Disable Router firewall

- <Forwarding>
- <Basic Security>
- <Firewall>

Due to firewall of router would block the P2P connection and then smart device couldn't connect with IP C.M. Lamp. If the original router needs firewall, it's highly recommended to set up another router only for IP C.M. Lamp, disable firewall and set the router to a fixed channel.

Regulations

Federal Communications Commission (FCC) Statement

You are cautioned that changes or modifications not expressly approved by the part responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) this device may not cause harmful interference, and
- 2) this device must accept any interference received, including interference that may cause undesired operation of the device.

(WIFI) For product available in the USA/Canada market, only channel 1~11 can be operated.
Selection of other channels is not possible.

FCC RF Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
