Dongguan Nore Testing Center Co., Ltd. Report No.: NTC1902066FV00 FCC ID: 2AMD8EP-062

# **RADIO TEST REPORT**

The device described below is tested by Dongguan Nore Testing Center Co., Ltd. to determine the maximum emission levels emanating from the device, the severe levels which the device can endure and E.U.T.'s performance criterion. The test results, data evaluation, test procedures, and equipment of configurations shown in this report were made in accordance with the procedures in ANSI C63.10(2013).

Applicant	: Shenzhen Ground Enterprises Co., LTD				
Address	: Room 607, Building F, MingYueHuaDu, Gonghe Industrial Rd, Xixiang, Bao An District,Shenzhen,518102,China

# **Revision History of This Test Report**

Report Number	Description	Issued Date
NTC1902066FV00	Initial Issue	2019-03-05

### **1. GENERAL INFORMATION**

### **1.1 Product Description for Equipment under Test**

Product Name	:	Sports TWS Earbuds
Main Model Name	:	EP-062
Additional Model Name	:	MI-E003T-101, MI-E003T-199
Model difference	:	Those models have the same circuit schematic, construction, PCB Layout and critical components. The difference is model number only due to trading purpose.
Brand Name	:	N/A
Rating	:	DC 5V (for Micro USB Port, ) DC 3.7V (For built-in battery)
Adapter	:	N/A
Test voltage	:	DC 3.7V
Cable	:	USB Line 0.32m unshielded
Hardware version	:	V1.0
Software version	:	V1.0
Note	:	<ol> <li>This product is composed of two parts, audio 1&amp;2. The circuit, structure and layout of the two parts are the same. After connecting one BT, the other part will be connected by default. We did all the testing on the audio 1.</li> <li>USB port only for charging.</li> </ol>

### Technical parameters

Bluetooth Version	:	V4.2
Frequency Range	:	2402-2480MHz
Modulation	:	GFSK, π/4-DQPSK
Number of Channel	:	79
Channel space	:	1MHz
Date Rate	:	1Mbps for GFSK 2Mbps for π/4-DQPSK
Antenna Type Antenna Gain		Chip antenna 0 dBi (Declaration by manufacturer)

#### **Channel List**

Channel	Frequency MHz	Channel	Frequency MHz	Channel	Frequency MHz	Channel	Frequency MHz
1	2402	21	2422	41	2442	61	2462
2	2403	22	2423	42	2443	62	2463

18	2419	38	2439	58	2459	78	2479
19	2420	39	2440	59	2460	79	2480
20	2421	40	2441	60	2461		

**Note:** According to section 15.31(m), regards to the operating frequency range over 10MHz, the Lowest, middle, and the Highest frequency of channel were selected to perform the test. The selected frequency and test software see below:

Channel	Frequency MHz
1	2402
40	2441
79	2480

Test SW version FCC Assist_1.5
--------------------------------

#### 1.2 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for FCC ID: 2AMD8EP-062 filing to comply with Section 15.247 of the FCC Part 15 (2017), Subpart C Rule.

#### 1.3 Test Methodology

Radiated emission measurements were performed according to the procedures in ANSI C63.10 (2013). Radiated emission measurement was performed in semi-anechoic chamber. For radiated emission measurement, preliminary scans were performed in the semi-anechoic chamber only to determine the worst case modes. All radiated tests were performed at an antenna to EUT distance of 3 meters.

#### **1.4 Equipment Modifications**

Not available for this EUT intended for grant.

#### 1.5 Support Device

Notebook	:	Manufacturer: IBM Model: 1834 P/N: 13N5615
Adapter (For Notebook)	:	Manufacturer: Huntkey Model: HKA09019047-6D I/P: AC 100-240V 50-60Hz, 1.5A O/P: DC 19V 4.74A

### 1.6 Test Facility and Location

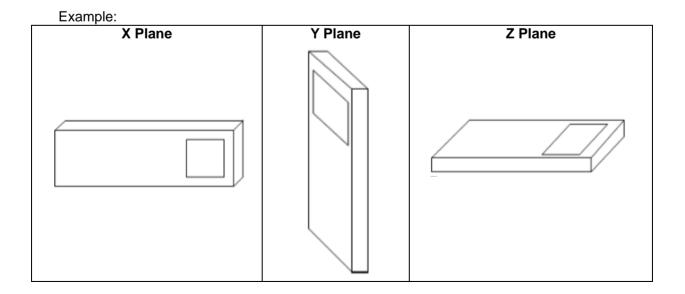

Site Description EMC Lab	<ul> <li>Listed by CNAS, August 13, 2018</li> <li>The certificate is valid until August 13, 2024</li> <li>The Laboratory has been assessed and proved to be in compliance with CNAS/CL01</li> <li>The Certificate Registration Number is L5795.</li> </ul>
	Listed by A2LA, November 01, 2017 The certificate is valid until December 31, 2019 The Laboratory has been assessed and proved to be in compliance with ISO17025 The Certificate Registration Number is 4429.01
	Listed by FCC, November 06, 2017 The Designation Number is CN1214 Test Firm Registration Number: 907417
Name of Firm	Listed by Industry Canada, June 08, 2017 The Certificate Registration Number. Is 46405-9743 Dongguan Nore Testing Center Co., Ltd. (Dongguan NTC Co., Ltd.)
Site Location	<ul> <li>Building D, Gaosheng Science and Technology Park, Hongtu Road, Nancheng District, Dongguan City, Guangdong Province, China</li> </ul>

### 1.7 Summary of Test Results

FCC Rules	Description Of Test	Uncertainty	Result
§15.247(a)(1)	Channel Separation test	±1.42 x10 <sup>-4</sup> %	Compliant
§15.247(a)(1)	20dB Bandwidth	±1.42 x10 <sup>-4</sup> %	Compliant
§15.247(a)(1)(iii)	Hopping Channel Number	±1.42 x10 <sup>-4</sup> %	Compliant
§15.247(a)(1)(iii)	Time of Occupancy (Dwell Time)	±5%	Compliant
§15.247(b)	Max Peak output Power test	±1.06dB	Compliant
§15.247(d)	Band edge test	±1.70dB	Compliant
§15.207 (a)	AC Power Conducted Emission	±1.06dB	Not application
§15.247(d),§15.209, §15.205	Radiated Emission	±3.70dB	Compliant
§15.203	Antenna Requirement	N/A	Compliant
§15.247(d)	Conducted Spurious Emission	±1.70dB	Compliant

- Note: 1. The bluetooth function is not available in the charging state, Therefore the AC Power Conducted Emission test is not applicable.
  - 2. The EUT powered by battery and operating multiple positions, so the EUT shall be performed three orthogonal planes. The worst plane is X.

### 2. System Test Configuration

#### 2.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner which intends to maximize its emission characteristics in a continuous normal application.

#### 2.2 Special Accessories

Not available for this EUT intended for grant.

#### 2.3 Description of test modes

The EUT has been tested under operating condition. Test program used to control the EUT for staying in continuous transmitting and normal mode is programmed. The Lowest, middle and highest channel were chosen for testing, and all packets DH1, DH3, DH5, 2-DH1, 2-DH3 and 2-DH5 mode in all modulation type GFSK,  $\pi$ /4-DQPSK were tested.

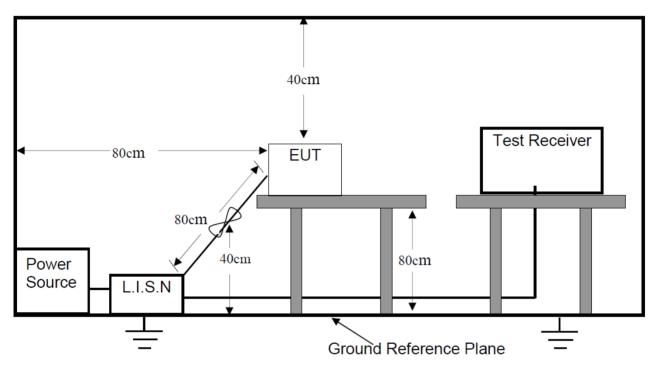

#### 2.4 EUT Exercise

The EUT was operated in the engineering mode to fix the Tx frequency that was for the purpose of the measurements.

### **3. Conducted Emissions Test**

#### **3.2 Test Condition**

Test Requirement: FCC Part 15.207

Frequency Range: 150KHz ~ 30MHz

Detector: RBW 9KHz, VBW 30KHz

**Operation Mode: TX** 

#### 3.3 Measurement Results

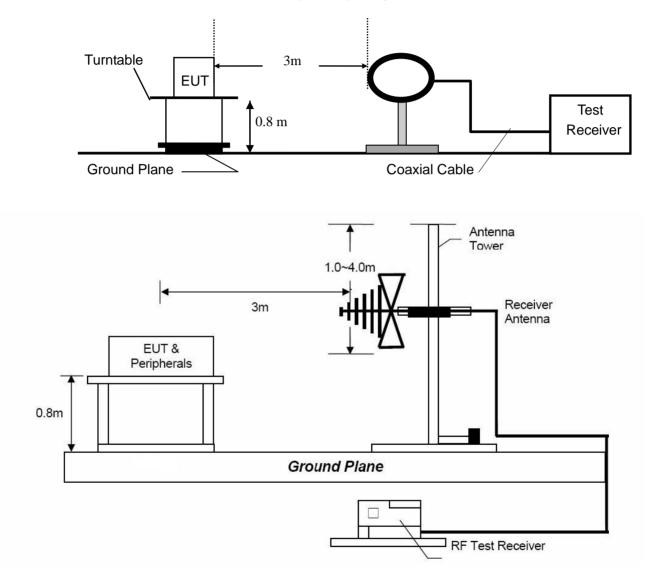

Not application

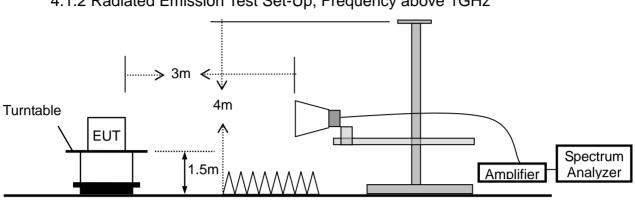

### 4. Radiated Emission Test

#### 4.1 Test SET-UP (Block Diagram of Configuration)

4.1.1 Radiated Emission Test Set-Up, Frequency Below 30MHz and 0.03-1GHz.

#### 4.1.2 Radiated Emission Test Set-Up, Frequency above 1GHz

#### **4.2 Measurement Procedure**

- a. Blow 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi- anechoic chamber room.
- b. For the radiated emission test above 1GHz:

The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter full anechoic chamber room. The table was rotated 360 degrees to determine the position of the highest radiation. Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.

- c. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- d. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- e. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading. The test-receiver system was set to peak detect function and specified bandwidth with maximum hold mode.
- f. A Quasi-peak measurement was then made for that frequency point for below 1GHz test. PK and AV for above 1GHz emission test.

During the radiated emission test, the spectrum analyzer was set with the following configurations:

Frequency Band (MHz)	Level	Resolution Bandwidth	Video Bandwidth
30 to 1000	QP	120 kHz	300 kHz
Above 1000	Peak	1 MHz	3 MHz
	Average	1 MHz	10 Hz

#### 4.3 Limit

Frequency range	Distance Meters	Field Strengths Limit (15.209)
MHz		μV/m
0.009 ~ 0.490	300	2400/F(kHz)
0.490 ~ 1.705	30	24000/F(kHz)
1.705 ~ 30	30	30
30 ~ 88	3	100
88 ~ 216	3	150
216 ~ 960	3	200
Above 960	3	500

Remark : (1) Emission level (dB) $\mu$ V = 20 log Emission level  $\mu$ V/m

- (2) The smaller limit shall apply at the cross point between two frequency bands.
- (3) As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.
- (4) The frequency range scanned is from the lowest radio frequency signal generated in the device which is greater than 9 kHz to the tenth harmonic of the highest fundamental frequency or 40 GHz, whichever is lower.

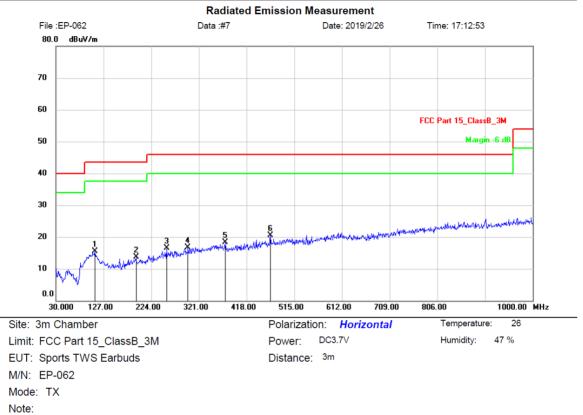

#### **4.4 Measurement Results**

Please refer to following plots of the worst case: TX ( $\pi$ /4-DQPSK Middle channel)

**Note:** (1) All Readings are Peak Value and AV.

- (2) Emission Level= Reading Level + Factor
- (3) Factor= Antenna Gain + Cable Loss Amplifier Gain
- (4) Data of measurement within this frequency range shown " ---" in the table above means the reading of emissions are attenuated more than 10dB below the permissible limits.
- (5) Measurement uncertainty: ±3.7dB.
- (6) Horn antenna used for the emission over 1000MHz.

### 5. Channel Separation test

#### 5.1 Measurement Procedure

Minimum Hopping Channel Carrier Frequency Separation, FCC Rule 15.247(a)(1):

Connect EUT antenna terminal to the spectrum analyzer with a low loss cable, and using the MARKER and Max-Hold function to record the separation of two adjacent channels.

#### 5.2 Test SET-UP (Block Diagram of Configuration)

### 6. 20dB Bandwidth

#### 6.1 Measurement Procedure

Maximum 20dB RF Bandwidth, FCC Rule 15.247(a)(1):

The antenna port of the EUT was connected to the input of a spectrum analyzer. Analyzer RBW was chosen so that the display was a result of the hopping channel modulation. For each RF output channel investigated, the spectrum analyzer center frequency was set to the channel carrier. Use the spectrum 20dB down delta function to measure the bandwidth.

#### 6.2 Test SET-UP (Block Diagram of Configuration)

#### 6.3 Measurement Results

Refer to attached data chart.

Modulation:	GFSK, π/4-DQPSK					
RBW:	30KHz	VBW:	100KHz			
Packet:	DH5, 2-DH5	Spectrum Detector:	PK			
Test By:	Lee	Test Date :	February 28, 2019			
Temperature :	22 °C	Humidity :	53 %			
Test Result:	PASS

# **GFSK Highest Channel**

### π/4-DQPSK Lowest Channel

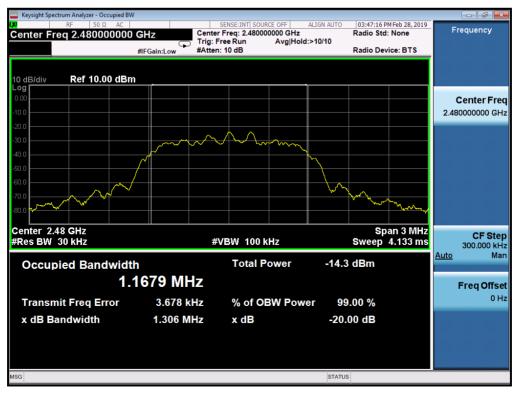

### π/4-DQPSK Middle Channel

# $\pi$ /4-DQPSK Highest Channel

# 7. Hopping Channel Number

#### 7.1 Measurement Procedure

Minimum Number of Hopping Frequencies, FCC Rule 15.247(a)(1)(iii):

Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum, and the spectrum analyzer set to MAX HOLD readings were taken for 3-5 minutes. The channel peaks so recorded were added together, and the total number compared to the minimum number of channels required in the regulation.

# 8. Time of Occupancy (Dwell Time)

#### 8.1 Measurement Procedure

Average Channel Occupancy Time, FCC Ref:15.247(a)(1)(iii):

Connect EUT antenna terminal to the spectrum analyzer with a low loss cable. The spectrum analyzer center frequency was set to one of the known hopping channels. The Sweep was set to 10 ms, the SPAN was set to Zero SPAN. The time duration of the transmissions so captured was measured with the Marker Delta function

#### 8.2 Measurement Results

The maximum number of hopping channels in 31.6s (0.4s/Channel x 79 Channel)

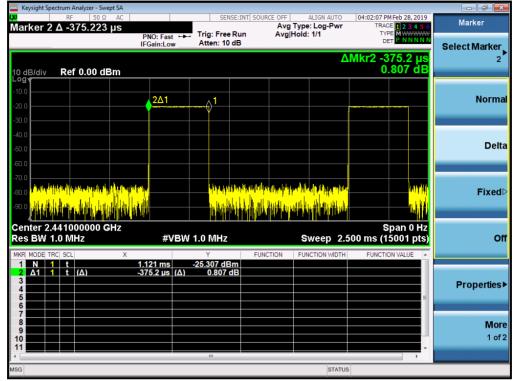

Refer to attached data chart.

### 9. MAXIMUM PEAK OUTPUT POWER

#### 9.1 Measurement Procedure

Maximum Conducted Output Power at Antenna Terminals, FCC Rules 15.247(b)(1):

Remove the antenna from the EUT and then connect a low RF cable from the antenna port to the spectrum. The analyzer was set for RBW > 20dB bandwidth and power was read directly in dBm. Cable loss was considered during this measurement.

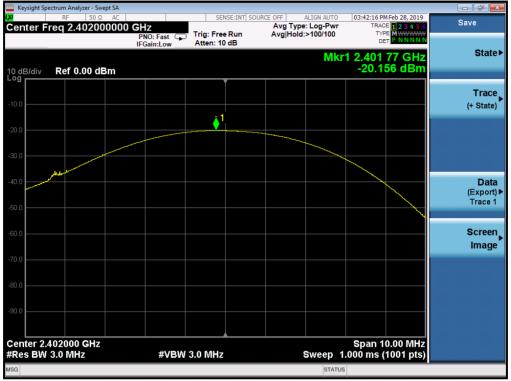

#### 9.2 Measurement Results

Refer to attached data chart.

Modulation :	GFSK, π/4-DQPS	SK

# π/4-DQPSK Lowest Channel

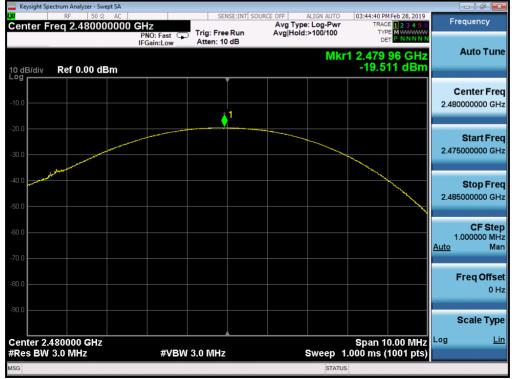

### π/4-DQPSK Middle Channel

# π/4-DQPSK Highest Channel

### 10. Band Edge

#### **10.1 Measurement Procedure**

Out of Band Conducted Emissions, FCC Rule 15.247(d):

The transmitter output is connected to spectrum analyzer. The resolution bandwidth is set to100KHz, and the video bandwidth set to 300KHz.

#### 10.2 Limit

15.247(d)In any 100KHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100KHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement.

#### **10.3 Measurement Results**

Please see below test table and plots. For Radiated Emission The worst case:  $\pi/4$ -DQPSK

Hopping-on mode

Freq. Ant.Pol (MHz) (H/V)		Rea Level(	0	Factor	Emissio (dBu			t 3m V/m)	Ma (d	rgin B)
	(H/V)	PK	AV	(dB/m)	PK	AV	PK	AV	PK	AV

# **GFSK Highest Channel**

#### π/4-DQPSK Lowest Channel

# $\pi$ /4-DQPSK Highest Channel

# **11.Antenna Application**

#### 11.1 Antenna requirement

According to of FCC part 15C section 15.203 and 15.240:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

Systems operating in the 2400-2483.5MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum peak output power of the intentional radiator is reduced by 1dB for every 3dB that the directional gain of the antenna exceeds 6dBi.

#### **11.2 Measurement Results**

The antenna is chip antenna and no consideration of replacement, and the best case gain of the antenna is 0 dBi. So, the antenna is consider meet the requirement.

### **12. Conducted Spurious Emissions**

#### **12.1 Measurement Procedure**

Out of Band Conducted Spurious Emissions, FCC Rule 15.247(d):

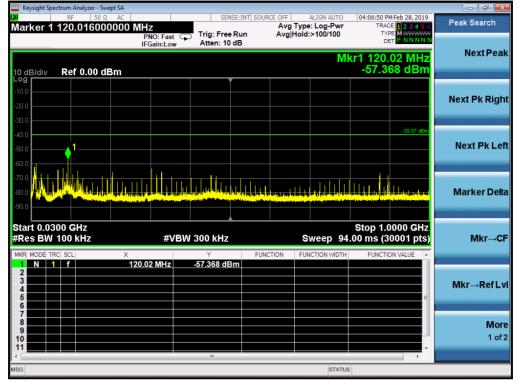

The transmitter output is connected to spectrum analyzer. All spurious emission and up tp the tenth harmonic was measured and they were found to be at least 20dB below the highest level of the desired power in the passband.

#### **12.2. Measurement Results**

Please refer to following plots, the worst case ( $\pi$ /4-DQPSK) was shown.
