Connect to a BOND that is already configured on your WIFI network

- This applies to a BOND that was already set up on your network – this means that the BOND is already familiar with the WIFI network you want to connect to it
- Make sure your iPad/iPhone is connected to the WIFI network the BOND was or is connected to
- Open the App and hit " skip"

d. Aim your remote at the BOND and PRESS and HOLD the function you want to record

e. The BOND blue light will flicker as it is scanning your remote:

i. The BOND will start flickering faster once the signal of your remote is detected

ii. keep pressing and holding the remote function you want to program as long as the blue light is flickering

f. When your remote signal was recorded the BOND light will change to GREEN for two seconds to signal successful recording and then go back to solid blue

g. Almost done:

i. If we found your remote in our database – no more work on your part.... Test it

and approve that it is working for you.

BOND is launching - get notified!

ii. If your remote is special you will have to repeat the recording process for each function on your remote.

Enter your Email

Move the BOND from one WIFI network to another

a. In order to move the BOND from an existing wifi network to another wifi network the BOND needs to be reset to "Access Point" mode

b. In order to reset the BOND to an access point mode the Reset button needs to be pressed and held for at least 3 seconds until the BLUE light turns to flashing GREEN

c. Once the BOND light is flashing GREEN release the RESET button.

1

Shares

d. Pressing the RESET button for more than 8 seconds will trigger a factory RESET which in addition to deleting the network information will delete the BOND database/Memory – all the reprogrammed remotes

1

e. To initiate the factory RESET press on the RESET button for more than 8 seconds and until the Light is blinking WHITE

## User Manual and User Information for Part 15 Devices

This Device has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation.

This Device meets the FCC Radio Frequency Emission Guidelines and is certified with the FCC as the FCC ID number found on the back of the Device. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance of 20 cm between the radiator and your body. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
