ACB:

In test report 12-11797-1-19 (lower band partial testing) and 01-11799-1-20 (upper band full testing), section 2.5.1. on page 7 states that testing was performed with the whip antenna, which is the original 1.04 dBi compressed whip. However, I understand you tested with a 1.8 dBi $\frac{1}{4}$ wave monopole, so why is that not listed?

Applicant:

The description in section 2.5.1 contains a mistake. The correct 1.8 dBi antenna was tested, and is listed in section 2.2 of the test report.
